Software Engineering Techniques Applied to Agricultural Systems Petraq J. Papajorgji, Panos M.

Pardalos, 2014-07-08 Software Engineering Techniques Applied to Agricultural Systems presents cutting edge software engineering techniques for designing and implementing better agricultural software systems based on the object oriented paradigm and the Unified Modeling Language UML The focus is on the presentation of rigorous step by step approaches for modeling flexible agricultural and environmental systems starting with a conceptual diagram representing elements of the system and their relationships Furthermore diagrams such as sequential and collaboration diagrams are used to explain the dynamic and static aspects of the software system This second edition includes a new chapter on Object Constraint Language OCL a new section dedicated to the Model VIEW Controller MVC design pattern new chapters presenting details of two MDA based tools the Virtual Enterprise and Olivia Nova and a new chapter with exercises on conceptual modeling It may be highly useful to undergraduate and graduate students as the first edition has proven to be a useful supplementary textbook for courses in mathematical programming in agriculture ecology information technology agricultural operations research methods agronomy and soil science and applied mathematical modeling The book has broad appeal for anyone involved in software development projects in agriculture and to researchers in general who are interested in modeling complex systems From the reviews of the first edition The book will be useful for those interested in gaining a quick understanding of current software development techniques and how they are applied in practice this is a good introductory text on the application of OOAD UML and design patterns to the creation of agricultural systems It is technically sound and well written Computing Reviews September 2006

Software Engineering Techniques Applied to Agricultural Systems Petraq

Papajorgji, Panos M. Pardalos, 2005-12-28 Software Engineering Techniques Applied to Agricultural Systems presents cutting edge software engineering techniques for designing and implementing better agricultural software systems based on the object oriented paradigm and the Unified Modeling Language UML The book is divided in two parts the first part presents concepts of the object oriented paradigm and the UML notation of these concepts and the second part provides a number of examples of applications that use the material presented in the first part The examples presented illustrate the techniques discussed focusing on how to construct better models using objects and UML diagrams More advanced concepts such as distributed systems and examples of how to build these systems are presented in the last chapter of the book The book presents a step by step approach for modeling agricultural systems starting with a conceptual diagram representing elements of the system and their relationships Furthermore diagrams such as sequential and collaboration diagrams are used to explain the dynamic and static aspects of the software system

Advances in Modeling Agricultural Systems Petraq

Papajorgji, Panos M. Pardalos, 2009-02-28 Agriculture has experienced a dramatic change during the past decades The change has been structural and technological Structural changes can be seen in the size of current farms not long ago

agricultural production was organized around small farms whereas nowadays the agricultural landscape is dominated by large farms. Large farms have better means of applying new technologies and therefore technological advances have been a driving force in changing the farming structure. New technologies continue to emerge and their mastery and use requires that farmers gather more information and make more complex technological choices. In particular, the advent of the Internet has opened vast opportunities for communication and business opportunities within the agricultural community. But at the same time it has created another class of complex issues that need to be addressed sooner rather than later. Farmers and agricultural researchers are faced with an overwhelming amount of information they need to analyze and synthesize to successfully manage all the facets of agricultural production. This daunting challenge requires new and complex approaches to farm management. A new type of agricultural management system requires active cooperation among multidisciplinary and multi-institutional teams and refining of existing and creation of new analytical theories with potential use in agriculture. Therefore, new management agricultural systems must combine the newest achievements in many scientific domains such as agronomy, economics, mathematics, and computer science to name a few.

New Technologies for Constructing Complex Agricultural and Environmental Systems Papajorgji, Petraq, Pinet, François, 2012-03-31. This book presents high quality research on the design and implementation of information systems in the fields of agronomics, mathematics, economics, computer science, and the environment, offering holistic approaches to the design, development, and implementation of complex agricultural and environmental information systems. Provided by publisher.

Enterprise Information Systems and Implementing IT Infrastructures: Challenges and Issues Parthasarathy, S., 2010-03-31.
