

7 STAGES OF THE SOFTWARE DEVELOPMENT PROCESS

INITIAL DISCUSSION

A vital element. This step lays the groundwork for research and analysis. The purpose of this step is to understand the requirements and user stories. The resulting analysis covers the software development aspects of business needs and it helps build a scope plan to determine and begin documentation efforts of the project.

0

PROJECT EVALUATION

The Project Manager understands all aspects of the project, its scope, and approach. In this step, the Project Manager also estimates the number of hours for the project.

1

START OF DEVELOPMENT

Upon approval, developers begin work based on the scoping plan and client's requirements, and if necessary, push code for incremental reviews during development.

2

PROJECT DELIVERY

The Project Manager is responsible for delivering periodic status updates, introducing and phasing out resources as the project progresses, communicating roadblocks or revisions, and performing basic quality assurance.

3

CODE REVIEW

The code is pushed for review prior to final deployment to identify errors, defects, or bugs.

4

DEPLOYMENT

This step is where the software goes live. After its release is approved, the software is deployed and ready for use.

5

SUPPORT

Software must be continuously maintained to ensure consistency in its quality and it needs to incrementally improve as the needs and requirements change. The software release life cycle sums up all versions of the software made from its initial stages to its released version.
