Innovation and Commercialization of Emerging Technologies ,1995 *Federal Information Processing Standards Publication* ,1985 **Real-Time UNIX® Systems** Borko Furht,Dan Grostick,David Gluch,Guy Rabbat,John Parker,Meg McRoberts,2012-12-06 A growing concern of mine has been the unrealistic expectations for new computer related technologies introduced into all kinds of organizations Unrealistic expectations lead to disappointment and a schizophrenic approach to the introduction of new technologies The UNIX and real time UNIX operating system technologies are major examples of emerging technologies with great potential benefits but unrealistic expectations Users want to use UNIX as a common operating system throughout large segments of their organizations A common operating system would decrease software costs by helping to provide portability and interoperability between computer systems in today s multivendor

environments Users would be able to more easily purchase new equipment and technologies and cost effectively reuse their applications And they could more easily connect heterogeneous equipment in different departments without having to constantly write and rewrite interfaces On the other hand many users in various organizations do not understand the ramifications of general purpose versus real time UNIX Users tend to think of real time as a way to handle exotic heart monitoring or robotics systems Then these users use UNIX for transaction processing and office applications and complain about its performance robustness and reliability Unfortunately the users don t realize that real time capabilities added to UNIX can provide better performance robustness and reliability for these non real time applications Many other vendors and users do realize this however There are indications even now that general purpose UNIX will go away as a separate entity It will be replaced by a real time UNIX General purpose UNIX will exist only as a subset of real time UNIX **Standardized**
