Solar Activity:

The Solar Activity Cycle André Balogh, Hugh Hudson, Kristóf Petrovay, Rudolf Steiger, 2015-04-16 A collection of papers edited by four experts in the field this book sets out to describe the way solar activity is manifested in observations of the solar interior the photosphere the chromosphere the corona and the heliosphere The 11 year solar activity cycle more generally known as the sunspot cycle is a fundamental property of the Sun This phenomenon is the generation and evolution of magnetic fields in the Sun s convection zone the photosphere It is only by the careful enumeration and description of the phenomena and their variations that one can clarify their interdependences The sunspot cycle has been tracked back about four centuries and it has been recognized that to make this data set a really useful tool in understanding how the activity cycle works and how it can be predicted a very careful and detailed effort is needed to generate sunspot numbers This book deals with this topic together with several others that present related phenomena that all indicate the physical processes that take place in the Sun and its exterior environment The reviews in the book also present the latest theoretical and modelling studies that attempt to explain the activity cycle It remains true as has been shown in the unexpected characteristics of the first two solar cycles in the 21st century that predictability remains a serious challenge Nevertheless the highly expert and detailed reviews in this book using the very best solar observations from both ground and space based telescopes provide the best possible report on what is known and what is yet to be discovered Originally published in Space Science Reviews Vol 186 Issues 1 4 2014

Solar Electromagnetic Radiation Study for Solar Cycle 22 Judit M. Pap, Claus Fröhlich, Roger K. Ulrich, 1998-03-31 Measurements of solar irradiance both bolometric and at various wavelengths over the last two decades have established conclusively that the solar energy flux varies on a wide range of time scales from minutes to the 11 year solar cycle The major question is how the solar variability influences the terrestrial climate The Solar Electromagnetic Radiation Study for Solar Cycle 22 SOLERS22 is an international research program operating under the auspices of the Solar Terrestrial Energy Program STEP Working Group 1 The Sun as a Source of Energy and Disturbances STEP is sponsored by the Scientific Committee of Solar Terrestrial Physics SCOSTEP of the International Council of Scientific Unions ICSU The main goal of the SOLERS22 1996 Workshop was to bring the international research community together to review the most recent results obtained from observations theoretical interpretation empirical and physical models of the variations in the solar energy flux and their possible impact on climate studies These questions are essential for researchers and graduate students in solar terrestrial physics
