Solartopia! Harvey Wasserman,2006-01-01 SOLARTOPIA is the Future of Energy the view from a hydrogen powered Hairliner in the year 2030 at a Mother Earth that has found peace with nature and her energy supply In the great utopian tradition of ECOTOPIA and LOOKING BACKWARD of BRAVE NEW WORLD and THE TIME MACHINE Harvey Wasserman s SOLARTOPIA enters the rarified realm of true futuristic classics Penned by one of the world s best known ecological activists SOLARTOPIA this powerful little volume will be with us for a long long time long after 3 gas and coal fired air pollution have become nothing but bad memories How the GOP Stole America's 2004 Election & is Rigging 2008 Bob Fittrakis,Robert J. Fittrakis,Harvey Wasserman,2005 This is the number one source book for the theft of the 2004 presidential election and control of the 2008 presidential contest compiled by the reporters Rev Jesse Jackson calls the Woodward Bernstein of the 2004 election This blunt hard hitting digest outlines and sources point by point what happened in Ohio to in 2004 to give George W Bush a second term Written by the two reporters who made this a global story there is no more essential guidebook for electoral politics in the new millennium *Sun Power* Neville Williams,2014-04-22 America as well as the rest of the world is on the brink of an energy revolution that can save the planet and increase peace and prosperity by harnessing the unlimited power of the sun the technology now exists to replace our dangerous addiction to fossil fuels with cheap clean solar energy Neville Williams has been on the leading edge of this revolution for decades and knows from firsthand experience how sun power can transform lives and communities for the better For more than twenty years he has traveled the globe bringing solar generated electricity to struggling communities throughout Asia Africa India and the developing world Williams has worked to introduce sun power to even the most off the grid reaches of the planet and then brought that knowledge and experience back to America where he founded one of the country s fastest growing solar companies Back cover The Palgrave Handbook of the International Political Economy of Energy Thijs Van de Graaf,Benjamin K. Sovacool,Arunabha Ghosh,Florian Kern,Michael T. Klare,2016-08-05 This Handbook is the first volume to analyse the International Political Economy the who gets what when and how of global energy Divided into five sections it features 28 contributions that deal with energy institutions trade transitions conflict and justice The chapters span a wide range of energy technologies and markets including oil and gas biofuels carbon capture and storage nuclear and electricity and it cuts across the domestic international divide Long standing issues in the IPE of energy such as the role of OPEC and the resource curse are combined with emerging issues such as fossil fuel subsidies and carbon markets IPE perspectives are interwoven with insights from studies on governance transitions security and political ecology The Handbook serves as a potent reminder that energy systems are as inherently political and economic as they are technical or technological and demonstrates that the field of IPE has much to offer to studies of the changing world of energy *Fortune* , **Harness the Sun** Philip Warburg,2016-09-06 Going from the inner city to the open desert a seasoned environmental advocate looks at

solar energy's remarkable ascent and its promise for America's future. Solar power was once the domain of futurists and environmentally minded suburbanites. Today it is part of mainstream America. Scan the skyline of downtown neighborhoods, check out the rooftop of the nearest Walmart and take a close look at your local sports arena. Chances are you'll find solar panels in those and many other unexpected places.

Harness the Sun: Philip Warburg takes readers on a far-flung journey that explores America's solar revolution. Beginning with his solar-powered home in New England, he introduces readers to the pioneers who are spearheading our move toward a clean energy economy. We meet the CEOs who are propelling solar power to prominence and the intrepid construction workers who scale our rooftops installing panels. We encounter the engineers who are building giant utility-scale projects in prime solar states like Nevada, Arizona, and California, and the biologists who make sure wildlife is protected at those sites. Warburg shows how solar energy has won surprising support across the political spectrum. Prominent conservatives embrace solar power as an emblem of market freedom, while environmental advocates see it as a way to reduce America's greenhouse gas emissions. At the same time, economic justice activists celebrate solar's potential to lift up low-income communities, and Native American leaders welcome the income and jobs that the industry will bring to their communities.

Yet solar energy has its downsides and detractors too. Conservationists worry about the impact of large solar farms on protected animal species, and some local citizens' groups resent the encroachment of solar projects on farmland and open spaces. Warburg gives voice to those at the epicenter of these conflicts and points the way to constructive solutions.

Harness the Sun offers a grounded, persuasive vision of America's energy future. It is a future fueled by clean renewable sources of power, with solar at center stage.

Solar Power Dustin Mulvaney, 2019-03-05

In this important new primer, Dustin Mulvaney makes a passionate case for the significance of solar power energy and offers a vision for a more sustainable and just solar industry for the future. The solar energy industry has grown immensely over the past several years and now provides up to a fifth of California's power. But despite its deservedly green reputation, solar development and deployment have potential social and environmental consequences, from poor factory labor standards to landscape impacts on wildlife. Using a wide variety of case studies and examples to trace the life cycle of photovoltaics, Mulvaney expertly outlines the state of the solar industry, exploring the ongoing conflicts between ecological concerns and climate mitigation strategies, as well as current trade disputes and the fate of toxins in solar waste products. This exceptional overview will outline the industry's current challenges and possible future for students in environmental studies, energy policy, environmental sociology, and other aligned fields.

Nuclear Roulette: Gar Smith, 2012

Nuclear power is not clean, cheap, or safe. With Three Mile Island, Chernobyl, and Fukushima, the nuclear industry's record of catastrophic failures now averages one major disaster every decade. After three US-designed plants exploded in Japan, many countries moved to abandon reactors for renewables. In the United States, however, powerful corporations and a compliant government still defend nuclear power while promising billion-dollar bailouts to operators. Each new disaster demonstrates that the nuclear

industry and governments lie to avoid panic to preserve the myth of safe clean nuclear power and to sustain government subsidies Tokyo and Washington both covered up Fukushima s radiation risks and when confronted with damning evidence simply raised the levels of acceptable risk to match the greater levels of exposure Nuclear Roulette dismantles the core arguments behind the nuclear industrial complex s Nuclear Renaissance While some critiques are familiar nuclear power is too costly too dangerous and too unstable others are surprising Nuclear Roulette exposes historic links to nuclear weapons impacts on Indigenous lands and lives and the ways in which the Nuclear Regulatory Commission too often takes its lead from industry rewriting rules to keep failing plants in compliance Nuclear Roulette cites NRC records showing how corporations routinely defer maintenance and lists resulting near misses in the US which average more than one per month Nuclear Roulette chronicles the problems of aging reactors uncovers the costly challenge of decommissioning explores the industry s greatest seismic risks not on California s quake prone coast but in the Midwest and Southeast and explains how solar flares could black out power grids causing the world s 400 plus reactors to self destruct This powerful expos concludes with a roundup of proven and potential energy solutions that can replace nuclear technology with a Renewable Renaissance combined with conservation programs that can cleanse the air and cool the planet **Future Power,Future Energy** Yoofisaca Syngkon Nongpluh,2008-01-01 Can you imagine having no petrol for your car Can you imagine no electricity to power your lights fridge and television The fuels we use today are going to be over sooner or later They are also causing pollution We need clean and renewable sources of energy This book takes a close look at solar energy as a future source of power **The Solar Economy** Hermann Scheer,2004 First Published in 2004 Routledge is an imprint of Taylor Francis an informa company
