Solitons In Multidimensions Inverse Spectral Transform Method:

Solitons In Multidimensions: Inverse Spectral Transform Method B G Konopelchenko,1993-04-30 The book is devoted to the mathematical theory of soliton phenomena on the plane The inverse spectral transform method which is a main tool for the study of the 2 1 dimensional soliton equation is reviewed The problem and the Riemann Hilbert problem method are discussed Several basic examples of soliton equations are considered in detail This volume is addressed both to the nonexpert and to the researcher in the field This is the first literature dealing specifically with multidimensional soliton equations

Introduction to Multidimensional Integrable Equations B.G. Konopelchenko,2013-06-29 The soliton represents one of the most important of nonlinear phenomena in modern physics It constitutes an essentially localized entity with a set of remarkable properties Solitons are found in various areas of physics from gravitation and field theory plasma physics and nonlinear optics to solid state physics and hydrodynamics Nonlinear equations which describe soliton phenomena are ubiquitous Solitons and the equations which commonly describe them are also of great mathematical interest Thus the discovery in 1967 and subsequent development of the inverse scattering transform method that provides the mathematical structure underlying soliton theory constitutes one of the most important developments in modern theoretical physics The inverse scattering transform method is now established as a very powerful tool in the investigation of nonlinear partial differential equations The inverse scattering transform method since its discovery some two decades ago has been applied to a great variety of nonlinear equations which arise in diverse fields of physics These include ordinary differential equations partial differential equations integrodifferential and differential difference equations The inverse scattering transform method has allowed the investigation of these equations in a manner comparable to that of the Fourier method for linear equations

The Legacy of the Inverse Scattering Transform in Applied Mathematics J. L. Bona, Roy Choudhury, David Kaup,2002 Swift progress and new applications characterize the area of solitons and the inverse scattering transform There are rapid developments in current nonlinear optical technology Larger intensities are more available pulse widths are smaller relaxation times and damping rates are less significant In keeping with these advancements exactly integrable soliton equations such as 3 wave resonant interactions and second harmonic generation are becoming more and more relevant in experimental applications Techniques are now being developed for using these interactions to frequency convert high intensity sources into frequency regimes where there are no lasers Other experiments involve using these interactions to develop intense variable frequency sources opening up even more possibilities This volume contains new developments and state of the art research arising from the conference on the Legacy of the Inverse Scattering Transform held at Mount Holyoke College South Hadley MA Unique to this volume is the opening section Reviews This part of the book provides reviews of major research results in the inverse scattering transform IST on the application of IST to classical problems in differential geometry on algebraic and analytic aspects of soliton type equations on a new method for studying boundary

value problems for integrable partial differential equations PDEs in two dimensions on chaos in PDEs on advances in multi soliton complexes and on a unified approach to integrable systems via Painleve analysis This conference provided a forum for general exposition and discussion of recent developments in nonlinear waves and related areas with potential applications to other fields The book will be of interest to graduate students and researchers interested in mathematics physics and engineering

Solitons Mohamed Atef Helal, 2022-11-12 This newly updated volume of the Encyclopedia of Complexity and Systems Science ECSS presents several mathematical models that describe this physical phenomenon including the famous non linear equation Korteweg de Vries KdV that represents the canonical form of solitons Also there exists a class of nonlinear partial differential equations that led to solitons e g Kadomtsev Petviashvili KP Klein Gordon KG Sine Gordon SG Non Linear Schrödinger NLS Korteweg de Vries Burger's KdVB etc Different linear mathematical methods can be used to solve these models analytically such as the Inverse Scattering Transformation IST Adomian Decomposition Method Variational Iteration Method VIM Homotopy Analysis Method HAM and Homotopy Perturbation Method HPM Other non analytic methods use the computational techniques available in such popular mathematical packages as Mathematica Maple and MATLAB The main purpose of this volume is to provide physicists engineers and their students with the proper methods and tools to solve the soliton equations and to discover the new possibilities of using solitons in multi disciplinary areas ranging from telecommunications to biology cosmology and oceanographic studies

Spectral Transform and Solitons F. Calogero, A. Degasperis, 2011-08-18 Spectral Transform and Solitons

KP Solitons and the Grassmannians Yuji Kodama, 2017-03-24 This is the first book to treat combinatorial and geometric aspects of two dimensional solitons Based on recent research by the author and his collaborators the book presents new developments focused on an interplay between the theory of solitons and the combinatorics of finite dimensional Grassmannians in particular the totally nonnegative TNN parts of the Grassmannians The book begins with a brief introduction to the theory of the Kadomtsev Petviashvili KP equation and its soliton solutions called the KP solitons Owing to the nonlinearity in the KP equation the KP solitons form very complex but interesting web like patterns in two dimensions These patterns are referred to as soliton graphs The main aim of the book is to investigate the detailed structure of the soliton graphs and to classify these graphs It turns out that the problem has an intimate connection with the study of the TNN part of the Grassmannians The book also provides an elementary introduction to the recent development of the combinatorial aspect of the TNN Grassmannians and their parameterizations which will be useful for solving the classification problem This work appeals to readers interested in real algebraic geometry combinatorics and soliton theory of integrable systems It can serve as a valuable reference for an expert a textbook for a special topics graduate course or a source for independent study projects for advanced upper level undergraduates specializing in physics and mathematics
