Solution Of The Truncated Complex Moment Problem For Flat Data:

Solution of the Truncated Complex Moment Problem for Flat Data Raúl E. Curto, Lawrence A. Fialkow, 1996 **Solution of the Truncated Complex Moment Problem for Flat Data** Raúl E. Curto, Lawrence A. Fialkow, 1996 We introduce a matricial approach to the truncated complex moment problem and apply it to the case of moment matrices of flat data type for which the columns corresponding to the homogeneous monomials in z and $\bar{z}$ of highest degree can be written in terms of monomials of lower degree We discuss the connection between complex moment problems and the subnormal completion problem for 2 variable weighted shifts and present in detail the construction of solutions for truncated complex moment problems associated with monomials of degrees one and two **An Introduction to Polynomial and**

Semi-Algebraic Optimization Jean Bernard Lasserre, 2015-02-19 This is the first comprehensive introduction to the powerful moment approach for solving global optimization problems and some related problems described by polynomials and even semi algebraic functions In particular the author explains how to use relatively recent results from real algebraic geometry to provide a systematic numerical scheme for computing the optimal value and global minimizers Indeed among other things powerful positivity certificates from real algebraic geometry allow one to define an appropriate hierarchy of semidefinite SOS relaxations or LP relaxations whose optimal values converge to the global minimum Several extensions to related optimization problems are also described Graduate students engineers and researchers entering the field can use this book to understand experiment with and master this new approach through the simple worked examples provided

Function Spaces Krzysztof Jarosz, 2007 This book consists of contributions by the participants of the Fifth Conference on Function Spaces held at Southern Illinois University in May of 2006 The papers cover a broad range of topics including spaces and algebras of analytic functions of one and of many variables and operators on such spaces L_p spaces spaces of Banach valued functions isometries of function spaces geometry of Banach spaces and other related subjects The goal of the conference was to bring together mathematicians interested in various problems related to function spaces and to facilitate the exchange of ideas between people working on similar problems Hence the majority of papers in this book are accessible to non experts Some articles contain expositions of known results and discuss open problems others contain new results

Analysis of Operators on Function Spaces Alexandru Aleman, Haakan Hedenmalm, Dmitry Khavinson, Mihai Putinar, 2019-05-30 This book contains both expository articles and original research in the areas of function theory and operator theory The contributions include extended versions of some of the lectures by invited speakers at the conference in honor of the memory of Serguei Shimorin at the Mittag Leffler Institute in the summer of 2018 The book is intended for all researchers in the fields of function theory operator theory and complex analysis in one or several variables The expository articles reflecting the current status of several well established and very dynamical areas of research will be accessible and useful to advanced graduate students and young researchers in pure and applied mathematics and also to engineers and

physicists using complex analysis methods in their investigations

Matrix Completions, Moments, and Sums of

Hermitian Squares Mihály Bakonyi, Hugo J. Woerdeman, 2011-07-18 Intensive research in matrix completions moments and sums of Hermitian squares has yielded a multitude of results in recent decades This book provides a comprehensive account of this quickly developing area of mathematics and applications and gives complete proofs of many recently solved problems With MATLAB codes and more than 200 exercises the book is ideal for a special topics course for graduate or advanced undergraduate students in mathematics or engineering and will also be a valuable resource for researchers Often driven by questions from signal processing control theory and quantum information the subject of this book has inspired mathematicians from many subdisciplines including linear algebra operator theory measure theory and complex function theory In turn the applications are being pursued by researchers in areas such as electrical engineering computer science and physics The book is self contained has many examples and for the most part requires only a basic background in undergraduate mathematics primarily linear algebra and some complex analysis The book also includes an extensive discussion of the literature with close to 600 references from books and journals from a wide variety of disciplines

Number Theory and Combinatorics Bruce M. Landman, Florian Luca, Melvyn B. Nathanson, Jaroslav Nešetřil, Aaron Robertson, 2022-04-19 Over a career that spanned 60 years Ronald L Graham known to all as Ron made significant contributions to the fields of discrete mathematics number theory Ramsey theory computational geometry juggling and magical mathematics and many more Ron also was a mentor to generations of mathematicians he gave countless talks and helped bring mathematics to a wider audience and he held significant leadership roles in the mathematical community This volume is dedicated to the life and memory of Ron Graham and includes 20 articles by leading scientists across a broad range of subjects that reflect some of the many areas in which Ron worked

Optimization of Polynomials in

Non-Commuting Variables Sabine Burgdorf, Igor Klep, Janez Povh, 2016-06-07 This book presents recent results on positivity and optimization of polynomials in non commuting variables Researchers in non commutative algebraic geometry control theory system engineering optimization quantum physics and information science will find the unified notation and mixture of algebraic geometry and mathematical programming useful Theoretical results are matched with algorithmic considerations several examples and information on how to use NCSOStools open source package to obtain the results provided Results are presented on detecting the eigenvalue and trace positivity of polynomials in non commuting variables using Newton chip method and Newton cyclic chip method relaxations for constrained and unconstrained optimization problems semidefinite programming formulations of the relaxations and finite convergence of the hierarchies of these relaxations and the practical efficiency of algorithms

Polynomial Optimization, Moments, and Applications Michal Kočvara, Bernard Mourrain, Cordian Riener, 2023-12-27 Polynomial optimization is a fascinating field of study that has revolutionized the way we approach nonlinear problems described by polynomial constraints The applications of this field

range from production planning processes to transportation energy consumption and resource control This introductory book explores the latest research developments in polynomial optimization presenting the results of cutting edge interdisciplinary work conducted by the European network POEMA For the past four years experts from various fields including algebraists geometers computer scientists and industrial actors have collaborated in this network to create new methods that go beyond traditional paradigms of mathematical optimization By exploiting new advances in algebra and convex geometry these innovative approaches have resulted in significant scientific and technological advancements This book aims to make these exciting developments accessible to a wider audience by gathering high quality chapters on these hot topics Aimed at both aspiring and established researchers as well as industry professionals this book will be an invaluable resource for anyone interested in polynomial optimization and its potential for real world applications

The Operator Hilbert Space $\mathcal{OH}_\infty$, Complex Interpolation and Tensor Norms Gilles Pisier, 1996 In the recently developed duality theory of operator spaces bounded operators are replaced by completely bounded ones isomorphism by complete isomorphisms and Banach spaces by operator spaces This allows for distinguishing between the various ways in which a given Banach space can be embedded isometrically into *italic capital B* *italic capital H* with *H* being Hilbert One of the main results is the observation that there is a central object in this class there is a unique self dual Hilbertian operator space which we denote by *italic capitals OH* which seems to play the same central role in the category of operator spaces that Hilbert spaces play in the category of Banach spaces
