The New Global Ecosystem in Advanced Computing National Research Council, Policy and Global Affairs, Board on Global Science and Technology, Committee on Global Approaches to Advanced Computing, 2012-10-23 Computing and information and communications technology ICT has dramatically changed how we work and live has had profound effects on nearly every sector of society has transformed whole industries and is a key component of U S global leadership A fundamental driver of advances in computing and ICT has been the fact that the single processor performance has until recently been steadily and dramatically increasing year over years based on a combination of architectural techniques semiconductor advances and software improvements Users developers and innovators were able to depend on those increases translating that performance into numerous technological innovations and creating successive generations of ever more rich and diverse products software services and applications that had profound effects across all sectors of society However we can no longer depend on those extraordinary advances in single processor performance continuing This slowdown in the growth of single processor computing performance has its roots in fundamental physics and engineering constraints multiple technological barriers have converged to pose deep research

challenges and the consequences of this shift are deep and profound for computing and for the sectors of the economy that depend on and assume implicitly or explicitly ever increasing performance From a technology standpoint these challenges have led to heterogeneous multicore chips and a shift to alternate innovation axes that include but are not limited to improving chip performance mobile devices and cloud services As these technical shifts reshape the computing industry with global consequences the United States must be prepared to exploit new opportunities and to deal with technical challenges The New Global Ecosystem in Advanced Computing Implications for U S Competitiveness and National Security outlines the technical challenges describe the global research landscape and explore implications for competition and national security

International Handbook of Research in History, Philosophy and Science Teaching Michael R.

Matthews,2014-07-03 This inaugural handbook documents the distinctive research field that utilizes history and philosophy in investigation of theoretical curricular and pedagogical issues in the teaching of science and mathematics It is contributed to by 130 researchers from 30 countries it provides a logically structured fully referenced guide to the ways in which science and mathematics education is informed by the history and philosophy of these disciplines as well as by the philosophy of education more generally The first handbook to cover the field it lays down a much needed marker of progress to date and provides a platform for informed and coherent future analysis and research of the subject The publication comes at a time of heightened worldwide concern over the standard of science and mathematics education attended by fierce debate over how best to reform curricula and enliven student engagement in the subjects There is a growing recognition among educators and policy makers that the learning of science must dovetail with learning about science this handbook is uniquely positioned as a locus for the discussion The handbook features sections on pedagogical theoretical national and biographical research setting the literature of each tradition in its historical context It reminds readers at a crucial juncture that there has been a long and rich tradition of historical and philosophical engagements with science and mathematics teaching and that lessons can be learnt from these engagements for the resolution of current theoretical curricular and pedagogical questions that face teachers and administrators Science educators will be grateful for this unique encyclopaedic handbook Gerald Holton Physics Department Harvard University This handbook gathers the fruits of over thirty years research by a growing international and cosmopolitan community Fabio Bevilacqua Physics Department University of Pavia

Apollo 11:

Advanced Techniques for Lunar Exploration and Settlement (The History of the Nasa Programs That Led to the Successful Apollo Missions) Douglas Benson,101-01-01

The Apollo Program is the most famous and celebrated in American history but the first successful landing of men on the Moon during Apollo 11 had complicated roots dating back over a decade and it also involved one of NASA s most infamous tragedies From 1959 1963 the United States worked toward putting satellites and humans into orbit via the Mercury program but Eisenhower s administration was already designing plans for the Apollo program by 1960 a year before the first Russian orbited the Earth and two years before John Glenn

became the first American to orbit the Earth This book takes you on a journey through Armstrong s early life his passion for aviation and his historic role in the Apollo 11 mission Discover the challenges triumphs and the momentous steps that led to the unforgettable phrase Perfect for space enthusiasts history buffs and anyone fascinated by human achievement The book focuses on a moon based infrastructure to sustain life and to be able to live on the moon The book also showed older traditional techniques that sailors used in the past on earth and the astronauts used during the Apollo missions But for a sustainable moon based society a moon based navigational infrastructure is a must to have and to navigate on the moon

Journalism in Global History Felix Ale, 2015-03-02 Essay from the year 2015 in the subject Engineering Aerospace Technology Atlantic International University language English abstract The media is a powerful tool for distribution of information As the mouth piece of society the fourth estate is responsible for ensuring that the audience is kept abreast of happenings in the society This has enabled the media to possess the power of agenda setting across the globe dictating the nature of developments in the society Usually the media dictates the development of ideas and innovations by highlighting the benefits of such developments To this end the media can be applauded for its beneficence to the society in not only conveying messages to geographically dispersed audience but also prompting action and intervention through opinion formation and reinforcement of issues that need these Space technology is one aspect of human development that has benefited immensely from media focus in Science and technology Having emerged just in the 1950s media coverage and analysis led to many countries considering implementing this technology While the development of space science might have been encouraged by global hegemonic and war strategies the media played a bigger role in creating awareness about the technology From time immemorial journalism has been cited as one of the sources of inspiration in the societies The inspirations come from the fact that journalists help drive specific agendas in the society Technology wise the inspirations of the media can be seen from the manner in which they have taken advantage of wars and made reports and analysis that prompted the adoption of certain war technologies into civil use After the First World War the advent of industrialization ushered countries to a new approach of winning economic competence The civilized European powers and United States of America engaged on economic propulsion and scientific discoveries which led to development of mass destruction weapons and fast warships as each country funded weaponry manufacturers and scientists While there are many technological development that have emerged from war and which have been adopted for civil use space technology stand out as one of the post second war technologies that has been shaped through journalism

International Peacekeeping: The Yearbook of International Peace

Operations Harvey Langholtz, Boris Kondocho, Alan Wells, 2004-11-01 International Peacekeeping is devoted to reporting upon and analyzing international peacekeeping with an emphasis upon legal and policy issues but is not limited to these issues It is recognized that in today's world there is a wealth of information available from the internet and through other sources It is therefore the goal of this Yearbook to make this information available in one publication which both organizes and records events over the course of a year through analytical articles a chronicle primary documents and a bibliography Topics include inter alia peacekeeping peace war conflict resolution diplomacy international law international security humanitarian relief humanitarian law and terrorism The Yearbook is of scholarly quality but is not narrowly theoretical It provides the interested public diplomats civil servants politicians the military academics journalists NGO employees and serious citizens with a document of record comment and a starting point for further research on peacekeeping and related topics This is achieved not only by the provision of basic documents on CD ROM such as Security Council Resolutions and Reports of the UN

Secretary General but also by expert commentaries on world events Peacekeeping is treated in a pragmatic light seen as a form of international military cooperation for the preservation or restoration of international peace and security Attention is focused not only on UN peacekeeping operations but other missions as well This Yearbook is the continuation of the journal International Peacekeeping

Weaponisation of Space: An Inevitable Reality and Plausible Fallout Group Captain PA Patil,2017-01-15 Militarily use of spacebased assets when integrated with operations assumes importance as one of the many force multipliers As on date outer space is being extensively used by the armed forces for varied services which include navigation intelligence surveillance reconnaissance environmental monitoring and advance warning The command and control in today s netcentric environment also depends on space resources Thus the use of outer space with spacebased assets in support of military operations leads to the deduction that space as a medium stands militarised Of late many of the dominant nations have developed or are expanding capabilities to attack the spacebased assets of potential adversaries to disrupt command and control structures Countries like the US and China are contesting for space supremacy and working towards developing spacebased weapons capable of being delivered from spacebased platforms These developments in turn are infusing a sense of insecurity amongst other international players including India and have raised concerns worldwide Development of spacebased weapons by any state has the potential to ignite a new arms race in space as many countries now possess the wherewithal for launching spacebased assets capable of carrying the required payloads Thus from the present capability of militarisation of space we seem to be graduating towards weaponisation of space As outer space has been designated as one of the global commons any sort of deployment or employment of space weapons raises concerns and any use of spacebased weapons will have unpleasant cascading effects In the absence of any international curb or law on space weaponisation it continues to be a conceptual possibility as well as an empirical reality
