Causality in Macroeconomics Kevin D. Hoover, 2001-08-13 First published in 2001 *Causality in Macroeconomics* addresses the long standing problems of causality while taking macroeconomics seriously The practical concerns of the macroeconomist and abstract concerns of the philosopher inform each other Grounded in pragmatic realism the book rejects the popular idea that macroeconomics requires microfoundations and argues that the macroeconomy is a set of structures that are best analyzed causally Ideas originally due to Herbert Simon and the Cowles Commission are refined and generalized to non linear systems particularly to the non linear systems with cross equation restrictions that are ubiquitous in modern macroeconomic models with rational expectations with and without regime switching These ideas help to clarify philosophical as well as economic issues The structural approach to causality is then used to evaluate more familiar approaches to causality due to Granger LeRoy and Glymour Spirtes Scheines and Kelly as well as vector autoregressions the Lucas critique and the exogeneity concepts of Engle Hendry and Richard **Asset Prices, Booms and Recessions** Willi Semmler, 2011-06-15 The financial market melt down of the years 2007 2009 has posed great challenges for studies on financial economics This financial economics text focuses on the dynamic interaction of financial markets and economic activity The financial market to be studied here encompasses the money and bond market credit market stock market and foreign exchange market economic activity includes the actions and interactions of firms banks households governments and countries The book shows how economic activity affects asset prices and the financial market and how asset prices and financial market volatility and crises impact economic activity The book offers extensive coverage of new and advanced topics in financial economics such as the term structure of interest rates credit derivatives and credit risk domestic and international portfolio theory multi agent and evolutionary approaches capital asset pricing beyond consumption based models and dynamic portfolio decisions Moreover a completely new section of the book is dedicated to the recent financial market meltdown of the years 2007 2009 Emphasis is placed on empirical evidence relating to episodes of financial instability and financial crises in the U S and in Latin American Asian and Euro area countries Overall the book explains what researchers and practitioners in the financial sector need to know about the financial real interaction and what practitioners and policy makers need to know about the financial market *Models of Simon* Kumaraswamy Vela Velupillai, 2017-11-22 Herbert Simon 1916 2001 is mostly celebrated for the theory of bounded rationality and satisficing This book of essays on *Models of Simon* tackles these topics that he broached in a professional career spanning more than 60 years Expository material on the fundamental concepts he introduced are re interpreted in terms of the theory of computability This volume frames the behavioural issues of concern for economists such as hierarchy causality near diagonal linear dynamical systems discovery the contrasts between the notion of heuristics and the Church Turing Thesis of Computability Theory There is

consistently an emphasis on the historical origins of the concepts Simon worked with in emphasising Human Problem Solving and Decision Making by rational individuals and institutions like Organizations The main feature of the results in the book are its emphasis on the procedural aspects of human problem solving decision making and the remarkable way Simon harnessed many tools of mathematical logic mathematics cognitive sciences economics and econometrics This long awaited volume is an important read for those who study economic theory and philosophy microeconomics and political economy as well as those interested in the great Herbert Simon's work
