

THE FERMİ PARADOX

The universe is incredibly old and unbelievably big - billions of galaxies, trillions of stars and even more planets. Why don't we see any aliens? Where are they? And more importantly, what does this tell us about our own fate in this gigantic universe?

WHERE IS EVERYBODY?

- Enrico Fermi, Physicist

WE ARE ALONE

There are no signs of Type II or higher civilizations on the Kardashev scale because we are alone in the universe, possibly the very first intelligent species.

TOO FAR AWAY

The universe is so large that we are actually limited in communication and travel to our local group of galaxies. Signals can take 100,000 years to reach it's destination just in the Milky Way galaxy alone.

THE GREAT FILTER

There is a barrier for life that needs to be overcome. It could be harder for complex life to develop than we realize, in which case we as humans are very lucky and may be the first. The other possibility is that life is common, however it destroys itself with advanced technology.
