Slagging And Fouling Due To Impurities In Combustion Gases:

Coal Quality and Combustion Performance John F. Unsworth, David J. Barratt, Peter T. Roberts, 1991 The scope and major findings of a research programme which has aimed to improve the scientific understanding of a wide range of aspects concerning coal utilisation in utility boilers is described in this book The pragmatic investigations undertaken by Shell Research are set against the background of recent work of other researchers and establishes usable links between the quality and performance of a variety of coal types The first section deals with analytical inspection properties of the coals and the structure of both the organic macerals and the associated minerals Nitrogen and sulphur containing components are considered together with the relationship between petrography and mineral matter The second section addresses the influence of organic structure pulverised fuel preparation and combustion The effect of coal quality on rapid pyrolysis of coal particles in a flame and subsequent char combustion is described and empirical models for the prediction of flame stability and char burn out are presented The final section deals with ash formation and deposition on boiler walls and tubes together with the control of pollutant emissions The objective of the book is to present scientific information on coal utilisation in a form which is accessible not only to researchers but also to those engaged in the day to day business of the coal trade

Fouling Science and Technology L. Melo, T.R. Bott, Carlos A. Bernardo, 2012-12-06 The fouling of heat exchangers reactors and catalysts remains one of the most urgent problems facing the process industries Over the past ten years there has been limited research and investigation into the underlying mechanisms which give rise to this problem For convenience particularly in heat exchanger technology the mechanisms involved have been subdivided into different subject areas It is often the situation that individuals or groups of workers have concentrated efforts in one or two of these specialist areas and there is a need to integrate the ideas across the whole spectrum of the subject In addition topics such as adhesion and surface phenomena have not been properly taken into account up till now in the assessment of the fouling processes For this reason it was considered essential that the recognised experts from around the world who are actively concerned with research development and design in the field should meet and exchange ideas and experience Such a meeting was held at Alvor Portugal in May 1987 sponsored by the NATO Advanced Study Institutes Programme In order to obtain a common basis for the work of the Advanced Study Institute the whole technological field was reviewed right from the basic concepts to the frontiers of present knowledge Each invited contributor was asked to make an overall presentation covering his or her area of expertise

Inorganic Transformations and Ash Deposition During Combustion Steven A. Benson, 1992 **Impact of Mineral Impurities in Solid Fuel Combustion** R. Gupta, T. Wall, L. Baxter, 2007-05-08 This book contains papers presented at the Engineering Foundation Conference on mineral matter in fuels held on November 2-7 1997 in Kona Hawaii The conference is one of a continuing series that was initiated by the CEGB Marwood Engineering Laboratories in 1963 The conference was to be eventually organised by the Engineering Foundation as the need for multi disciplinary work related to c

trolling ash effects in combustors became apparent The conference covers both the science and the applications The papers also present case histories particularly for current fuel technologies developments in advanced technologies for power generation and mathematical modelling of these processes Developments since 1963 have been slow but steady due to the complexity of the chemical and physical processes involved However the research presented here displays great improvement in our understanding of the mechanisms by which mineral matter will influence fuel use Steve Benson from EERC presented a review and current status of issues related to ash deposition in coal combustion and gasification The application of new analytical tools which have been detailed in the previous conferences is presented These include CCSEM as well as new techniques for characterising sintering of ash such as TMA image analysis X ray diffraction crystallography and thermal analysis The new analytical techniques were extended to encompass widely differing fuels such as biomass Ole H Larsen from ELSAM Denmark presented a review of these advanced techniques

Fundamentals of the Physical-Chemistry of Pulverized Coal Combustion L Lahaye, G. Prado, 2012-12-06 The study of coal for the production of energy is certainly not a new area of research Many research works were carried out to improve the efficiency of industrial and domestic facilities In the sixties however because of the availability and low cost of petroleum coal consumption decreased and the research effort in this area was minimum Meanwhile the situation has totally changed Considering the reserves of oil and the instability of regions where they are located it is becoming absolutely necessary to develop other sources of energy The major alternative to oil appears to be coal at least for the near future Indeed the reserves known today represent several centuries of energy consumption it is therefore becoming urgent to develop efficient and non polluting technologies to produce energy from coal The main possibilities are liquefaction gasification directed combustion Research and development efforts on liquefaction have been considerably reduced because of high cost of technologies involved and poor prospects for the next two decades Research works on gasification are progressing it is a promising approach However direct combustion either in pulverized coal furnaces or in fluidized beds is the more promising way of expanding rapidly the utilization of coal These techniques are already used in some facilities but many environmental problems remain slowing down their development

Mineral Impurities in Coal Combustion Erich Raask, 1985

The Impact Of Ash Deposition On Coal Fired Plants Jim Williamson, 2022-10-12 Coal provides almost 40% of the world's electricity and despite the understandable concern with respect to the environmental impact associated with coal use forecasts from the International Energy Agency predict that worldwide coal use will increase by up to 2% per annum until the year 2010 Faced with this increase it is clearly important that the most efficient and environmentally acceptable clean coal technologies are available This book is comprised of the proceedings of the Engineering Foundation Conference held in June 1993 in England The objective of the conference was to present ideas on methods of predicting and reducing the effects of ash deposition in coal conversion systems highlighting the problems experienced in industry considering both utilities and industrial plants and providing a view of the technology of

coal ash deposition and its impact Better techniques are needed to reduce the impact of ash deposition in coal fired plants and these proceedings should form a reference document for anyone either experiencing slagging or actively engaged in trying to understand or eliminate the phenomenon

Organic Matter and Mineralisation: Thermal Alteration, Hydrocarbon Generation and Role in Metallogenesis Miryam Glikson, Maria Mastalerz, 2000-01-31 This book demonstrates the direct link between petroleum the derivative of organic materials and ore bodies The studies reported here highlight the common factors between hydrocarbons and mineral concentrations such as heat sources migration routes and likely traps It emphasizes the role that hydrothermal processes play in the genesis of both petroleum generation and ore grade mineralization The presence of oil residue in the form of bitumen and pyrobitumen in all sediment hosted ore bodies throughout the geological record is a testimony to their common diagenetic history Studies of active hydrothermal systems reported in this book describe the processes and derivatives in these environments linking hydrocarbon generation and mineral precipitation A comparison with residual oil in many ore bodies and mineralization occurrences in the geological record as depicted in this book can be explained in terms of processes in active hydrothermal systems One of the most interesting and challenging recent discoveries that of living nano bacteria is reported in this book The nanobes as they have recently been dubbed have been suggested as the link between the living and non living matter The resemblance of these nano organisms to fossil forms observed in a Martian meteorite have been reported recently in the media Likewise the similarity to nano bacteria in Archaean sediments is highlighted in two chapters of the book NASA Technical Paper ,1984

Lignites of North America H.H. Schobert, 1995-01-10 Providing a comprehensive survey of the origin the fundamental properties and the technology of utilization of the lignites of North America this book will be of particular interest to professional scientists and engineers working in coal research or coal technology Coals display a continuum of properties often with no sharp steep change between ranks and thus the book restricts the discussion strictly to lignites with the occasional comparisons with other coals There is a very extensive index making the contents of the book easily accessible to the reader
