The Ecology and Management of Wetlands Donald D. Hook, W. H. McKee Jr, H. K. Smith, James Gregory, V. G. Burrell Jr, M. Richard DeVoe, R. E. Sojka, Stephen Gilbert, Roger Banks, L. H. Stolzy, Chris Brooks, Thomas D. Matthews, T. H. Shear, 2012-12-06 This book contains the proceedings of a symposium held at the College of Charleston Charleston South Carolina USA 16-20 June 1986 The seed for this symposium arose from a group of physiologists soil scientists and biochemists that met in Leningrad USSR in July 1975 at the 12th Botanical Conference in a Session organized by Professor B. B. Vartepetian This group and others later conspired to contribute to a book entitled *Plant Life in Anaerobic Environments* eds D. D. Hook and R. M. Crawford Ann Arbor Science 1978 Several contributors to the book suggested in 1983 that a broad scoped symposium on wetlands would be useful a in facilitating communication among the diverse research groups involved in wetlands research b in bringing researchers and managers together and c in presenting a comprehensive and balanced coverage on the status of ecology and management of wetlands from a global perspective With this encouragement the senior editor organized a Planning Committee that encompassed expertise from many disciplines of wetland scientists and managers This Committee with input from their colleagues around the world organized a symposium that addressed almost every aspect of wetland ecology and management

Water Relations of Plants and Soils Paul J. Kramer, John S. Boyer, 1995-07-28 *Water Relations of Plants and Soils* successor to the seminal 1983 book by Paul Kramer covers the entire field of water relations using current concepts and consistent terminology Emphasis is on the interdependence of processes including rate of water absorption rate of transpiration resistance to water flow into roots soil factors affecting water availability New trends in the field such as the consideration of roots rather than leaves as the primary sensors of water stress are examined in detail Addresses the role of

water in the whole range of plant activities Describes molecular mechanisms of water action in the context of whole plants
Synthesizes recent scientific findings Relates current concepts to agriculture and ecology Provides a summary of methods

Interacting Stresses on Plants in a Changing Climate Michael B. Jackson, Colin R. Black, 2013-06-29 Books dealing with climatic change are commonplace as are those concerned with effects of environmental stresses on plants The present volume distinguishes itself from earlier publications by highlighting several interrelated environmental stresses that are changing in intensity as the climate warms in response to the accumulation of greenhouse gases The stresses examined at the NATO Advanced Research Workshop upon which this book is based include atmospheric pollutants flooding and submergence drought and cold In future successful farming or landscape management will ultimately depend on strategies that offset the effects of these and other environmental constraints while exploiting more favourable features However the predicted speed of climate change may exceed the rate at which new approaches farming forestry landscape management and genetic conservation can be developed through experience and retroactive response The alternative is to anticipate future needs and thus identify appropriate management and legislative strategies by research and discussion The contents of this volume contribute to these vital processes upon which the productivity of agroecosystems and conservation of natural ecosystems may increasingly depend Those with any lingering doubts concerning the gravity of the likely future situation are especially encouraged to read the opening chapter For convenience chapters discussing pollution flooding drought and cold are grouped in separate sections However many authors have taken care to emphasise that interactions between the changing combinations of stresses pose particular problems for plants and plant communities

The Role of Plant Roots in Crop Production Nand Kumar Fageria, 2012-07-23 *The Role of Plant Roots in Crop Production* presents the state of knowledge on environmental factors in root growth and development and their effect on the improvement of the yield of annual crops This book addresses the role of roots in crop production and includes references to numerous annual crops In addition it brings together the issues and the state of the art technologies that affect root growth with comprehensive reviews to facilitate efficient sustainable economical and environmentally responsible crop production Written for plant scientists crop scientists horticulturalists and soil scientists plant physiologists breeders environmental scientists agronomists and undergraduate and graduate students in different disciplines of agricultural science *The Role of Plant Roots in Crop Production* Addresses root architecture and development dynamics to help users improve crop productivity Emphasizes crop production plant nutrition and soil chemistry relative to root growth and functions Covers root morphology root functions nutrient and water uptake by roots root soil interactions root environment interactions root microbe interactions physiology of root crops and management practices to improve root growth Supports content with experimental results and additional data is presented with pictures Increasing food production worldwide has become a major issue in the 21st century Stagnation in grain yield of important food crops in recent years in developed as well as developing countries

has contributed to a sharp increase in food prices Furthermore higher grain yield will be needed in the future to feed a burgeoning world population with a rising standard of living that requires more grain per capita Technologies that enhance productivity ensure environmental safety and conserve natural resources are required to meet this challenge Oxygen Transport in Biological Systems S. Egginton,H. F. Ross,1992-11-12 An authoritative and stimulating review of theoretical and methodological developments in the area of oxygen transport *Enhancing Agricultural Water Management: Techniques for Improving Crop Water Efficiency and Sustainability* Qi Wu,Junying Chen,Emmanuel Arthur ,Hanmi Zhou,2025-08-22

Research on crop water requirements is pivotal for precision irrigation and agricultural water conservation Various farm management techniques such as deficit irrigation with optimized water allocation various irrigation methods sprinkler drip and micro sprinkler irrigation and biological water saving technologies significantly influence the pattern of crop water demand The application of these technologies exhibits spatial variability For example water use efficiency at the field scale might exceed that at the irrigation district scale where irrigation practices are more precision oriented thereby affecting water use efficiency from a broader perspective Understanding and applying advanced water management techniques enables farmers to adjust their practices for more efficient water use ultimately leading to more resilient and sustainable agricultural practices Therefore it is crucial to study the impact of various agricultural irrigation and fertigation techniques on crop water demand water physiology and water use efficiency to enhance crop resistance to water shortage and improve water use efficiency The objective of this research topic is to explore the impacts of varying water and fertilizer management strategies particularly with the integration of innovative technologies across different scales on crop water demands water related physiological functions crop growth dynamics and their role in enhancing crop resilience This investigation will cover the extensive physiological adaptations of crops to these strategies examining the consequences of diverse irrigation and fertilization coupling modes at the field level on crop water use and physiological functions alongside the evaluation of crop water related physiological processes at the irrigation district magnitude This Research Topic aims to report recent breakthroughs in the deployment of novel water and fertilizer management strategies or models within plant sciences Authors are welcome to submit related to but not limited to the following topics Response mechanisms of crops to novel water and fertilizer management technologies Physiological responses of crops to water productivity under deficit irrigation Variability and precise control of crop water efficient utilization at large scale Impact of coupled water and fertilizer management on soil crop interactions Impact of changing weather patterns on crop water and nutrient requirements Implementation of smart farming technologies in water and fertilizer application Water use efficiency and irrigation practices Models for managing water and fertilizer
