## **Solution Of Initial Value Problems In Classes Of Generalized Analytic Functions:**

*Solution of Initial Value Problems in Classes of Generalized Analytic Functions* Wolfgang Tutschke, 2013-03-09 The purpose of the present book is to solve initial value problems in classes of generalized analytic functions as well as to explain the functional analytic background material in detail From the point of view of the theory of partial differential equations the book is intended to generalize the classical Cauchy-Kovalevskaya theorem whereas the functional analytic background connected with the method of successive approximations and the contraction mapping principle leads to the concept of so called scales of Banach spaces 1 The method of successive approximations allows to solve the initial value problem  $u'(t) = f(t, u(t))$  where  $u(t)$  is real or vector valued It is well known that this method is also applicable if the function  $u$  belongs to a Banach space A completely new situation arises if the right hand side  $f(t, u)$  of the differential equation (1) depends on a certain derivative  $Du$  of the sought function i.e the differential equation (1) is replaced by the more general differential equation  $du/dt = f(t, u, Du)$  (3) There are differential equations of type (3) with smooth right hand sides not possessing any solution to say nothing about the solvability of the initial value problem (3) (2) Assume for instance that the unknown function denoted by  $w$  is complex valued and depends not only on the real variable  $t$  that can be interpreted as time but also on spacelike variables  $x$  and  $y$  Then the differential equation (3)

Heinrich Begehr, A. Okay Celebi, W. Tutschke, 2013-12-01 This volume is a collection of manuscripts mainly originating from talks and lectures given at the Workshop on Recent Trends in Complex Methods for Partial Differential Equations held from July 6 to 10 1998 at the Middle East Technical University in Ankara Turkey sponsored by The Scientific and Technical Research Council of Turkey and the Middle East Technical University This workshop is a continuation of two workshops from 1988 and 1993 at the International Centre for Theoretical Physics in Trieste Italy entitled Functional analytic Methods in Complex Analysis and Applications to Partial Differential Equations Since classical complex analysis of one and several variables has a long tradition it is of high level But most of its basic problems are solved nowadays so that within the last few decades it has lost more and more attention The area of complex and functional analytic methods in partial differential equations however is still a growing and flourishing field in particular as these methods are not only applied Within the framework of holomorphic functions but are also combined with properties of generalized analytic functions This can be seen by the many books which recently were published in this field and also by the proceedings in this ISAAC series and the ISAAC congresses and workshops      **Analytic Functions** Blazejewko 1982 J. Lawrynowicz, 2006-11-14      Functional Analytic Methods In Complex Analysis And Applications To Partial Differential Equations A S A Mshimba, Wolfgang Tutschke, 1995-10-17 These proceedings concentrate on recent results in the following fields of complex analysis complex methods for solving boundary value problems with piecewise smooth boundary data complex methods for linear and

nonlinear differential equations and systems of second order and applications of scales of Banach spaces to initial value problems Some problems in higher dimensions such as the unification of global and local existence theorems for holomorphic functions and an elementary approach to Clifford analysis are also discussed Particular emphasis is placed on Symbolic Computation in Complex Analysis and on the new approaches to teach mathematical analysis based on interactions between complex analysis and partial differential equations

Helmut Florian, Norbert Ortner, Franz Josef Schnitzer, Wolfgang Tutschke, 2001-11-12 Functional analysis is not only a tool for unifying mathematical analysis but it also provides the background for today's rapid development of the theory of partial differential equations Using concepts of functional analysis the field of complex analysis has developed methods such as the theory of generalized analytic functions for solving very general classes of partial differential equations This book is aimed at promoting further interactions of functional analysis partial differential equations and complex analysis including its generalizations such as Clifford analysis New interesting problems in the field of partial differential equations concern for instance the Dirichlet problem for hyperbolic equations Applications to mathematical physics address mainly Maxwell's equations crystal optics dynamical problems for cusped bars and conservation laws remove a remove

**Partial Differential Equations in Clifford Analysis** Elena Obolashvili, 1999-01-06 Clifford analysis represents one of the most remarkable fields of modern mathematics With the recent finding that almost all classical linear partial differential equations of mathematical physics can be set in the context of Clifford analysis and that they can be obtained without applying any physical laws it appears that Clifford analysis itself can

suggest new equations or new generalizations of classical equations that may have some physical content Partial Differential Equations in Clifford Analysis considers in a multidimensional space elliptic hyperbolic and parabolic operators related to Helmholtz Klein Gordon Maxwell Dirac and heat equations The author addresses two kinds of parabolic operators both related to the second order parabolic equations whose principal parts are the Laplacian and d Alembertian an elliptic type parabolic operator and a hyperbolic type parabolic operator She obtains explicit integral representations of solutions to various boundary and initial value problems and their properties and solves some two dimensional and non local problems Written for the specialist but accessible to non specialists as well Partial Differential Equations in Clifford Analysis presents new results reformulations refinements and extensions of familiar material in a manner that allows the reader to feel and touch every formula and problem Mathematicians and physicists interested in boundary and initial value problems partial differential equations and Clifford analysis will find this monograph a refreshing and insightful study that helps fill a void in the literature and in our knowledge

**Finite or Infinite Dimensional Complex Analysis and Applications** Le Hung Son, Wolfgang Tutschke, Chung-Chun Yang, 2013-12-01 There is almost no field in Mathematics which does not use Mathematical Analysis Computer methods in Applied Mathematics too are often based on statements and procedures of Mathematical Analysis An important part of Mathematical Analysis is Complex Analysis because it has many applications in various branches of Mathematics Since the field of Complex Analysis and its applications is a focal point in the Vietnamese research programme the Hanoi University of Technology organized an International Conference on Finite or Infinite Dimensional Complex Analysis and Applications which took place in Hanoi from August 8 12 2001 This conference th was the 9 one in a series of conferences which take place alternately in China Japan Korea and Vietnam each year The first one took place th at Pusan University in Korea in 1993 The preceding 8 conference was th held in Shandong in China in August 2000 The 9 conference of the was the first one which took place above mentioned series of conferences in Vietnam Present trends in Complex Analysis reflected in the present volume are mainly concentrated in the following four research directions 1 Value distribution theory including meromorphic functions meromorphic mappings as well as p adic functions over fields of finite or zero characteristic and its applications 2 Holomorphic functions in several finitely or infinitely many complex variables 3 Clifford Analysis i e complex methods in higher dimensional real Euclidian spaces 4 Generalized analytic functions

New Trends in Analysis and Interdisciplinary Applications Pei Dang, Min Ku, Tao Qian, Luigi G. Rodino, 2017-04-18 This book presents a collection of papers from the 10th ISAAC Congress 2015 held in Macau China The papers prepared by respected international experts address recent results in Mathematics with a special focus on Analysis By structuring the content according to the various mathematical topics the volume offers specialists and non specialists alike an excellent source of information on the state of the art in Mathematical Analysis and its interdisciplinary applications
