Gilbert, 1994-01-01 Since the 1950s Latin America has been transformed from a rural to an urban society The region now contains some of the world's biggest cities headed by Mexico City with its 20 million inhabitants In all but five Latin American countries more people now live in towns and cities than in the countryside This mass movement from country to city has put enormous strain on the infrastructure and services of cities such as Bogota and Caracas Conditions continue to worsen as governments cut back social spending in their structural adjustment programmes The Latin American City looks at the region's urban explosion from the perspective of the poor It asks why people are attracted to the city and examines the underlying problem of rural poverty which fuels the exodus It explores the options open to those arriving in the city and the strategies used in order to acquire land and build a home Highlighting the role of the informal sector in urban survival it also explains how popular organisation and protest can result in improved living standards for the poor **I Saw a City**

Violence and Resilience in Latin American Cities Kees Koonings,Dirk Kruijt,2015-11-15 Why are Latin American cities amongst the most violent in the world Over the past decades Latin America has not only become the most urbanised of the regions of the so called global South it has also been the scene of the urbanisation of poverty and exclusion Overall regional homicides rates are the highest in the world a fact closely related to the spread and use of firearms by male youths who are frequently involved in local and translocal forms of organised crime In response governments and law enforcements agencies have been facing mounting pressure to address violence through repressive strategies which in turn has led to a number of consequences law enforcement is often based on excessive violence and the victimisation of entire marginal populations Thus the dynamics of violence have generated a widespread perception of insecurity and fear Featuring much original fieldwork across a broad array of case studies this cutting edge volume focuses on questions not only of crime insecurity and violence but also of Latin American cities ability to respond to these problems in creative and productive ways

The Quality of Life in Latin American Cities Eduardo Lora,Andrew Powell,Bernard M.S. van Praag,Pablo Sanguinetti,2010-05-04 A growing number of cities around the world have established systems for monitoring the quality of urban life Many of those systems combine objective information with subjective opinions and cover a wide variety of topics This book assesses a method that takes advantage of both types of

information and offers criteria to identify and rank the issues of potential importance for urban dwellers This method which combines the so called hedonic price and life satisfaction approaches to value public goods was tested in pilot studies in six Latin American cities Bogot Buenos Aires Lima Medell n Montevideo and San Jos of Costa Rica It provides valuable insights to address key questions such as Which urban problems have the greatest impact on people s opinions of city management and the most widespread effects on their lives Do gaps between perception and reality vary from one area of the city to another especially between high and low income neighborhoods Where can homebuilders most feasibly seek solutions to problems such as inadequate road infrastructure a lack of recreational areas or poor safety conditions Which problems should government authorities address first in light of their impact on the well being of various groups of individuals and given private actors abilities to respond Which homeowners benefit the most from public infrastructure or services When can or should property taxes be used to finance the provision of certain services or the solution of certain problems The Quality of Life in Latin American Cities Markets and Perception proposes a monitoring system that is easy to operate and that entails reasonable costs but also has a solid conceptual basis Long the ideal of many scholars and practitioners such a system may soon become a reality and have the potential to make a significant contribution to the decision making processes in any city concerned with the well being of its residents
