The Leukemic Cell:

The Leukemic Cell Daniel Catovsky, 1991 This new edition includes two new chapters each on cell markers and DNA analysis Also the role of ultrastructural morphology in immunocytochemistry is examined in greater detail than before and there is a new chapter on lymphoid malignancies The emphasis is on practical approach The Leukemia Cell Arnold D. Rubin, Samuel Waxman, 1979 The Leukemic Child Mikie Sherman, 1976 Dynamic Morphology of Leukemia Cells H. Felix, G. Haemmerli, P. Sträuli, 2012-12-06 Dynamic Morphology is the attempt to correlate surface architecture and shape of fixed cells as visualized by scanning electron microscopy SEM with the behavior of living cells recorded by microcinematography MCM If SEM and MCM are used concurrently for the analysis of cell populations a dynamic interpretation of SEM photographs is only valid if the experimental conditions are identical for the two techniques This is achieved by allowing the cells to settle on a glass surface where they remain long enough to perform their various activities under conditions identical for both techniques for technical details see Methodology The analysis of a population necessitates the study of a large number of cells This prerequisite is met by operating the scanning electron microscope at low levels of magnification and by using culture chambers for cinematography It can be argued that the examination of attached cells excludes a complete SEM survey of a population as cells not adhering from the outset or becoming detached during the different preparatory steps are lost For this cinematography proved to be a reliable control All cell types recognized in time lapse films were also seen in scanning electron SE micrographs Another and more general objection to a dynamic interpretation concerns the artificiality of cellular behavior on glass This is true but does not invalidate comparative studies making use of this substrate **The Leukemias: Etiology, Pathophysiology, and Treatment** John W. Rebuck, Frank H. Bethell, Raymond W. Monto, 2013-10-22 The Leukemias Etiology Pathophysiology and Treatment documents the proceedings of an International Symposium on The Leukemias Etiology and Pathophysiology held at Henry Ford Hospital Detroit Michigan 8 10 March 1956 This volume gives the present complex position of leukemic etiology and pathophysiologic disturbance a much needed knowledge of detailed leukocytic functions and comprehensive thought on the therapy of the leukemias It also establishes a basis of comparison with the earlier works of Downey and Forkner in this field in the late thirties and thus makes it possible to see with some clarity the extent of progress made The volume contains 39 papers organized into nine parts The papers in Part I focus on the leukemic cell its structure and antigenicity Part II presents studies on genetic and environmental factors in the transmission of leukemia Part III examines the radiation biology of leukocytes Part IV focuses on the leukemias and the malignant lymphomas while Part V deals with leukocytic physiology Part VI covers the metabolism of amino and nucleic acids in the leukemias Part VII takes up further biochemical considerations in the leukemias Part VIII contains papers that examine nucleic acids as the target for chemotherapy Part IX presents a round table discussion on therapy The Leukemia-Lymphoma Cell Line Factsbook Hans G. Drexler, 2000-09-04 The Leukemia

Unclassifiable Leukemias M. Bessis, G. Brecher, 2012-12-06 Jean BERNARD I should like to begin with an assumption and a paradox. The assumption is that leukemia is a disease of a stem cell characterized by pathologic alterations of that cell and its progeny. All present research and discussions are centered around the leukemic cell. So is this symposium which would not take place except for our primary interest in the leukemic cell. This does not preclude of course consideration of other definitions and other approaches to the problem. By definition then the leukemic cells are abnormal cells and their metabolism and functions are presumed to be abnormal. Yet the classification of the different types of leukemias is based upon the characteristics of normal cells. We talk of lymphoblasts and myeloblasts as predominant cell types in leukemia. This leads to a double paradox. In the first place it is clearly illogical to classify abnormal cells by their resemblance to normal cells since their very abnormality consists in not being normal. Yet as a second paradox the classification has had the happy consequence of aiding us in the treatment and prognosis of leukemia for the past 25 years. A more detailed analysis shows that the consequence of this paradox are complex while there exists a useful correlation between cellular types treatment and prognosis. Numerous problems and difficulties persist. The most serious of them concerns the unclassified leukemias which are the reason for this reunion.

Immunologic Approaches to the Classification and Management of Lymphomas and Leukemias John M. Bennett, Kenneth A. Foong, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy? The few general oncology textbooks are generally out of date. Single papers in specialized journals are informative but seldom comprehensive. These are more often preliminary reports on a very limited number of patients. Certain general journals frequently publish

Blood Smears Reinterpreted Marcel Bessis,2012-12-06 The translation of Blood Smears Reinterpreted was begun when the French original was still undergoing revisions I was accorded the opportunity to question any statement or turn of phrase that was unclear to me or appeared liable to misinterpretation It is my hope that as a result ambiguities particularly those inherent in differences between American and European usage have been removed and that I have at least approached the ultimate goal of any translation to reflect the author's intention accurately while remaining as readable as the original Beyond the role of translator I was encouraged to assume the role of critic As a result some pages or even single sentences were hotly debated sometimes for hours as Marcel Bessis insisted that any interpretations on which we could not agree should be so indicated In fact our discussion invariably ended in agreement though they led to changes of a sentence here or a word there and on occasion to the addition of a footnote or a brief paragraph
