Jasanoff, Marybeth Martello, 2004-03-19 Globalization today is as much a problem for international harmony as it is a necessary condition of living together on our planet Increasing interconnectedness in ecology economy technology and politics has brought nations and societies into even closer contact creating acute demands for cooperation Earthly Politics argues that in the coming decades global governance will have to accommodate differences even as it obliterates distance and will have to respect many aspects of the local while developing institutions that transcend localism This book analyzes a variety of environmental governance approaches that balance the local and the global in order to encourage new more flexible frameworks of global governance On the theoretical level it draws on insights from the field of science and technology studies to enrich our understanding of environmental development politics On the pragmatic level it discusses the design of institutions and processes to address problems of environmental governance that increasingly refuse to remain within national boundaries The cases in the book display the crucial relationship between knowledge and power the links between the ways we understand environmental problems and the ways we manage them and illustrate the different paths by which knowledge power formations are arrived at contested defended or set aside By examining how local and global actors ranging from the World Bank to the Makah tribe in the Pacific Northwest respond to the contradictions of globalization the authors identify some of the conditions for creating more effective engagement between the global and the local in environmental governance

Science and the Pacific War Roy M. MacLeod, 1999-12-31 In 1995 the fiftieth anniversary of the end of the Second World War occasioned many reflections on the place of science and technology in the conflict That the war ended with Allied victory in the Pacific theatre inevitably focussed attention upon the Pacific region and particularly upon the Manhattan project and its outcome It was in the Pacific that Western physics and engineering gave birth to the Atomic Age However the Pacific war had also proved a testing time and a testing space for other disciplines and institutions Extreme environments and operational distances and the fundamental demands of logistics required the Allies and the Japanese to innovate many scientific and technological practices Just as medicine and botany were called upon to fight tropical diseases and insect pests so engineers anthropologists and geographers were called upon to understand local conditions and climates and to work with local peoples whose traditional lives were changed forever by the experience At the same time the war played midwife to a host of new developments not least in scientific intelligence and in chemical and biological weapons which were to acquire far greater importance after 1945
