The Limits Of Lawfulness Studies On The Scope And Nature Of Scientific Knowledge:

The Limits of Lawfulness Nicholas Rescher, 1983

Rescher on Rationality, Values, and Social Responsibility

Nicholas J. Moutafakis, 2013-05-02 Nicholas Rescher stands as a major figure in American Philosophy today. His philosophical contribution ranging over fifty years is marked by a profound respect for the fate of the human condition in a world of unparalleled scientific and technological innovation. This work brings under the centrally unifying theme of rationality some of the issues on values and personal responsibility he has addressed during his long and distinguished career. The book is intended to illustrate the synthesis of Rescher's thinking relative to these ideas as expounded upon for many decades.

I was asked and alas with little reflection on the magnitude of the task thoughtlessly consented to take on the simple job of writing a preface to the collection of essays comprising this volume. That I was asked to carry out this simple task was probably due to one consideration: I was the main representative of the host institution, Clark University, for the 1991 ISTP Conference at which the talks foreshadowing and outlining the extended remarks here printed were originally presented and hence as a token of gratitude I was vouchsafed the honor of setting the stage. It did not dawn on me until I began piecemeal to receive and accumulate over a period of months the remarkably diverse and heterogeneous essays precipitated by the conference how mind boggling it would be to pen a preface pertinent to such an aggregate of *prima facie* unrelated articles. Typically prefaces to collections of essays from different hands are attempts by the prefator or a pride of prefators to provide an overview, a concise map of the complex terrain which readers are invited to enter or to direct the attention of potential readers to what the editors take to be the essential or central themes of each of the variegated articles, a practice which not infrequently and often not unjustifiably irritates and even enrages individual authors who object to the complexity, profundity and nuanced character of their thought being reduced to clicMs and editorial equivalents of sound bites.

Metaphor II Jean-Pierre

Noppen, Edith Hols, 1990-01-01 Metaphor though not now the scholarly mania it once was remains a topic of great interest in many disciplines albeit with interesting shifts in emphasis. Warren Shibles, *Metaphor: An Annotated Bibliography and History* Bloomington, Ind. 1971 recorded the initial interest. Then *Metaphor: A Bibliography of Post 1970 Publications* published by John Benjamins continued the record through the mania years up to 1985 when writings proliferated as metaphor was seen to be a fundamental category in human thought and language. Five years later there is a need for a report on the newest thinking and tendencies in the field. This need is fulfilled by *Metaphor II* which offers a comprehensive view of information which would otherwise remain scattered throughout a numbing plethora of resources including many sometimes hard to find publications from Eastern Europe. *Metaphor II* systematically collects references of books, articles and papers published between 1985 and May 1990 and includes for completeness corrections and additions to the earlier bibliographies. Abstracts

are given for many of the titles while four indices disciplines semantic fields metaphor theory and names multiply the number of access points to the information

Recent Trends in Theoretical Psychology W.J. Baker, Leendert P. Mos, Hans V. Rappard, Henderikus J. Stam, 2012-12-06 This volume constitutes the proceedings of the second biannual conference of the International Society for Theoretical Psychology see Epilogue held in Banff Alberta Canada April 20-25 1987 Thirty nine papers were presented during the four days of the conference including an invited address by Kenneth Gergen Unfortunately even after severely restricting the length of the written papers the required limitation on printed space permitted only 34 of these to be included in these proceedings While most of the papers required editorial adjustment the authors had final word on style and content The classification of conference papers tends to be somewhat arbitrary but we decided to structure the chapters under four headings philosophy metatheory methodology and theory By philosophy we refer primarily to issues in the philosophy of science as these pertain to the discipline of psychology Metatheory refers to theory drawing on the philosophy of science and having implications for methodology about psychological theories Methodology refers to both theory of inquiry and specific methods of investigation as these derive from philosophical and meta-theoretical considerations By theory we refer to both analyses of the foundations of extant theory including historical and sociological analyses and the advancement of substantive theory

Thing Knowledge Davis Baird, 2004-02-10 Davis Baird's Thing Knowledge uses instruments to do philosophy Grappling with a wonderful assortment of objects from antique orreries to modern spectrographs he draws the

reader deep into fascinating questions about the nature of knowledge All too often the knowledge Baird pursues here has been obscured by accounts that reduce understanding to theory By contrast in this rich text Baird shows the myriad of ways that models and devices do work in science by representing by manipulating by measuring and by calculating This is a book as lucid on the semantic account of theories as it is on the inner workings of the cyclotron it is a book that brings the laboratory to philosophers and philosophy into the laboratory Peter Galison author of Einstein's Clocks Poincaré's Maps Empires of Time Davis Baird has given us something new and demanding to think about namely in addition to propositional knowledge he argues there is thing knowledge That is scientific instruments embody or encapsulate knowledge in ways that most often not transparent In making his case Baird forces us to reconceptualize how we go about doing science and how to understand the product of human labor both intellectual and manual Thing Knowledge is must reading for anyone interested in the development of science and its attendant technologies Joseph C Pitt author of Thinking About Technology Foundations of the Philosophy of Technology Over the years the new frontier in philosophy of science has been on logic then on theories to most recently on models and experimentation Davis Baird goes one step further and considers the immediate kind of knowledge embodied by scientific instruments and devices His book is highly thought provoking and will become a classic source Eric Scerri UCLA Department of Chemistry and Biochemistry and editor of Foundations of Chemistry From the air pump to the dynamo to the cyclotron machines have played key roles in the development of scientific knowledge Here for the first time Davis Baird looks at those machines as actual forms of scientific knowledge Baird moves adeptly from historical case study to philosophical explanation in this convincing study of the material culture of science Ann Johnson Department of History Fordham University **The Journal of Critical Analysis** ,1979 Revue roumaine de philosophie ,1992
