[The Past and the Future of Human Immunity Under Viral Evolutionary Pressure](#) Gkikas Magiorkinis, Tara P. Hurst, 2019-12-04 There is a long standing evolutionary battle between viruses and their hosts that continues to be waged The evidence of this conflict can be found on both sides with the human immune system being responsive to new viral challenges and viruses having developed often sophisticated countermeasures The arms race between viruses and hosts can be thought as an example of the Red Queen race an evolutionary hypothesis inspired from the dialogue of Alice with the Red Queen in Lewis Carroll's *Through the Looking Glass* At the same time viruses have a minimal genomic content as they have evolved to hitchhike biological machinery of their hosts or other co-infecting viruses The minimalistic viral genome could be thought as the result of a Black Queen evolution a theory inspired from the card game *Hearts* where the winner is the one with the fewest points at the end The effects of this arms race are evident in the evolution of the human immune system This system is capable of responding to diverse viral challenges utilizing both the ancient innate immune system and the more recently evolved adaptive immune system of jawed vertebrates It is now well known that the two systems are linked with innate immunity hypothesized to have provided raw material for the emergence of the adaptive immune response The adaptive immune response comprises several protein families including B and T cell receptors MHC and KIR proteins for example that are encoded by complex and variable genomic regions This complexity enables for responsive genetic changes to occur in immune cells such as the ability of genomic hypervariable regions in B cells to recombine in order to produce more specific antibodies Indeed the human immune system is thought to be continually evolving via various mechanisms such as changes in the genes encoding immune receptors and the regulatory sequences that control their expression For example there is some evidence that exogenous viral infections can alter the expression of endogenous retroviruses some of which contribute to the immune response Viral countermeasures can include encoding decoy receptors for the signalling molecules of the immune response altering the gene expression of adaptive immune cells during chronic infection or using host enzymes to facilitate viral immune escape As the articles herein show the immune system continues to be challenged by viral infections and these challenges continue to shape how the immune system combats pathogens thus viruses and human immunity are continuously part of Red and Black Queen evolutionary dynamics We had the pleasure of working with Jonas Blomberg as a reviewer during the course of the Research Topic and his untimely passing was a great loss Prof Blomberg made significant contributions including to the nomenclature of endogenous retroviruses ERVs the evolution and characterization of specific human ERV HERV and the contribution of ERVs to diseases such as cancer It is with great respect for his contributions to the ERV field that we dedicate this eBook to his memory

The Story of Food in the Human Past Robyn E. Cutright, 2021-01-26 A sweeping overview of how and what humans

have eaten in their long history as a species *The Story of Food in the Human Past: How What We Ate Made Us Who We Are* uses case studies from recent archaeological research to tell the story of food in human prehistory Beginning with the earliest members of our genus Robyn E Cutright investigates the role of food in shaping who we are as humans during the emergence of modern *Homo sapiens* and through major transitions in human prehistory such as the development of agriculture and the emergence of complex societies This fascinating study begins with a discussion of how food shaped humans in evolutionary terms by examining what makes human eating unique the use of fire to cook and the origins of cuisine as culture and adaptation through the example of Neandertals The second part of the book describes how cuisine was reshaped when humans domesticated plants and animals and examines how food expressed ancient social structures and identities such as gender class and ethnicity Cutright shows how food took on special meaning in feasts and religious rituals and also pays attention to the daily preparation and consumption of food as central to human society Cutright synthesizes recent paleoanthropological and archaeological research on ancient diet and cuisine and complements her research on daily diet culinary practice and special purpose mortuary and celebratory meals in the Andes with comparative case studies from around the world to offer readers a holistic view of what humans ate in the past and what that reveals about who we are

Past Human Migrations in East Asia Alicia Sanchez-Mazas,Roger Blench,Malcolm D. Ross,Ilia Peiros,Marie Lin,2008-07-25 The study of the prehistory of East Asia is developing very rapidly In uncovering the story of the flows of human migration that constituted the peopling of East Asia there exists widespread debate about the nature of evidence and the tools for correlating results from different disciplines Drawing upon the latest evidence in genetics linguistics and archaeology this exciting new book examines the history of the peopling of East Asia and investigates the ways in which we can detect migration and its different markers in these fields of inquiry Results from different academic disciplines are compared and reinterpreted in the light of evidence from others to attempt to try and generate consensus on methodology Taking a broad geographical focus the book also draws attention to the roles of minority peoples hitherto underplayed in accounts of the region s prehistory such as the Austronesian Tai Kadai and Altaic speakers whose contribution to the regional culture is now becoming accepted Past Human Migrations in East Asia presents a full picture of the latest research on the peopling of East Asia and will be of interest to scholars of all disciplines working on the reconstruction of the peopling of East and North East Asia

Retallack, 2012-12-06 Landscapes viewed from afar have a timeless quality that is soothing to the human spirit Yet a tranquil wilderness scene is but a snapshot in the steady stream of surficial change Wind water and human activities reshape the landscape by means of gradual to catastrophic and usually irreversible events Much of this change destroys past landscapes but at some times and places landscapes are buried in the rock record This work is dedicated to the discovery of past landscapes and their life through the fossil record of soils A long history of surficial changes extending back almost to the origin of our planet can be deciphered from the study of these buried soils or paleosols Some rudiments of this history and our place in it are outlined in a final section of this book But first it is necessary to learn something of the language of soils of what happens to them when buried in the rock record and which of the forces of nature can be confidently reconstructed from their remains Much of this preliminary material is borrowed from soil science but throughout emphasis is laid on features that provide most reliable evidence of landscapes during the distant geological past This book has evolved primarily as a text for senior level university courses in paleopedology the study of fossil soils

Snapshots of the Past Brian M. Fagan, 1995 Archaeology has been a subject of endless fascination to scholars students and the general public For the past three decades Prof Brian Fagan has been the key narrator of the story of the past for many through his textbooks trade books and numerous magazine and journal articles In recent years Fagan has reported on the latest news theories and controversies in archaeology through his regular Timelines column in Archaeology Magazine In Snapshots of the Past Fagan collects many of these vignettes into a single work leading the reader on a tour through time and space that ranges from the ascent of the human species to the public controversies that concern today's archaeologist In these 30 brief chapters the author offers readers a series of snapshots of the issues of greatest contemporary interest the Eve hypothesis the peopling of the New World site looting the translation of Mayan hieroglyphs the domestication of animals the impact of feminism on archaeology the archaeology of slavery and evidence of human cannibalism among many others Included among the articles are several pieces written specifically for this volume including a description of the recent spectacular cave art finds at Chauvet Grotto in France For instructors of archaeology the book is a handy compilation of brief interesting cases to engage your students For serious archaeologists the book represents a collection of works of one of the important synthesizers of the field For the avocational archaeologist the book provides a fascinating readable update on issues of current concern Telling Children About the Past Nena Galanidou, Liv Helga Dommasnes, 2007-12-01 This book brings together archeologists historians psychologists and educators from different countries and academic traditions to address the many ways that we tell children about the distant past Knowing the past is fundamentally important for human societies as well as for individual development The authors expose many unquestioned assumptions and preformed images in narratives of the past that are routinely presented to children The contributors both examine the ways in which children come to grips with the past and critically assess the many ways in which contemporary societies and an increasing number of

commercial agents construct and use the past
