Transforming Urban Education

Kenneth Tobin, Ashraf Shady, 2014-04-03 *Transformations in Urban Education: Urban Teachers and Students Working Collaboratively* addresses pressing problems in urban education contextualized in research in New York City and nearby school districts on the Northeast Coast of the United States. The schools and institutions involved in empirical studies range from elementary through college and include public and private schools, alternative schools for dropouts, and museums. Difference is regarded as a resource for learning, and equity issues are examined in terms of race, ethnicity, language proficiency, designation as special education, and gender. The contexts for research on teaching and learning involve science, mathematics, uses of technology, literacy, and writing comic books. A dual focus addresses research on teaching and learning and learning to teach in urban schools. Collaborative activities addressed explicitly are teachers and students enacting roles of researchers in their own classrooms, cogenerated dialogues as activities to allow teachers and students to learn about one another's cultures and express their perspectives on their experienced realities and negotiate shared recommendations for changes to enacted curricula. Coteaching is also examined as a means of learning to teach, teaching and learning, and undertaking research. The scholarship presented in the constituent chapters is diverse, reflecting multi-logicality within sociocultural frameworks that include cultural sociology, cultural historical activity theory, prosody, sense of place, and hermeneutic phenomenology. Methodologies employed in the research include narratology, interpretive, reflexive, and authentic inquiry, and multi-level inquiries of video resources combined with interpretive analyses of social artifacts selected from learning environments. This edited volume provides insights into research of places in which social life is enacted as if there were no research being undertaken. The research was intended to improve practice. Teachers and learners as research participants were primarily concerned with teaching and learning, and as a consequence, as we learned from research, participants were made aware of what we learned, the purpose being to improve learning environments. Accordingly, research designs are contingent on what happens and emergent in that what we learned changed what happened and expanded possibilities to research and learn about transformation through heightening participants' awareness about possibilities for change and developing interventions to improve learning.

Religious Cognition in China Ryan G. Hornbeck, Justin L. Barrett, Madeleine Kang, 2017-09-27 Are human tendencies toward religious and spiritual thoughts, feelings, and actions outcomes of natural cognition? This volume revisits the naturalness theory of religious cognition through discussion of new qualitative and quantitative studies examining the psychological foundations of religious and spiritual expression in historical and contemporary China. Naturalness theory has been challenged on the grounds that little of its supporting developmental and experimental research has drawn on participants from predominantly secular cultural environments. Given China's official secularity, its large proportion of atheists, and its alleged long history of dominant nonreligious philosophies, can any broad claim for religion's psychological naturalness be plausible? Addressing this empirical gap, the studies discussed in this volume support core naturalness theory predictions for human reasoning about supernatural agency, intelligent design, the

efficacy of rituals and vitalistic causality And yet each study elucidates expands upon or even challenges outright the logical assumptions of the naturalness theory Written for a non specialist audience this volume introduces the naturalness theory and frames the significance of these new findings for students and scholars of cultural psychology the psychology of religion the anthropology of religion and Chinese Studies **Business Research Methods** Emma Bell,Alan Bryman,Bill Harley,2022 Affective Education Isadore L. Cline,2013-12-16 This book reports an attempt to introduce change in schools using a computer based curriculum innovation for teaching higher order thinking skills to middle and high school students One of the volume s themes is the extraordinary complexity and difficulty of facilitating such change in schools A corollary of that theme is the fact that patience must be an integral part of the strategy when promoting or studying change in schools In reporting the activities during the early years of a technological innovation and research project in which the emphasis thus far has been

primarily on establishing the change this book focuses on describing the move to a technology based learning environment As such it details an ongoing process a fascinating process and one that is likely to be repeated in the near future in countless schools throughout the nation *Psychiatry and Law* Amichay Levy,David Nachshon,Amnon Carmi,2002

M. Edwards,2023-02-22 This book covers the discovery and the results of the analytical study of the composition of the Farnley Hall service involving both the embossed moulding and the decorative compositions The discovery of this missing porcelain service which was manufactured 200 years ago is a modern detective story in the preservation of cultural heritage whilst its physical analysis has identified some new data that need to be incorporated into correcting and expanding the literature that is used for the differentiation of porcelains by ceramic historians and museum conservators The importance of the Farnley Hall service discovery is that it provides the only example of such a Nantgarw Porcelain service that still resides in its original place of usage from 200 years ago it is therefore a unique example and is a very important part of our national cultural heritage It provides an illustration of the data that can be accessed from the application of inductive reasoning to elicit novel information about a manufactory whose work books no longer exist and its comparison with contemporary manufactories in the late eighteenth and early nineteenth centuries The concepts can be appreciated by experts and also by non technical readers This is the first time that such a detailed research approach has been adopted for any comparative ceramic project The book is therefore relevant for a specialist and non specialist readership including museum ceramics curators and collectors of the genre **Active Learning in College Science** Joel J. Mintzes,Emily M. Walter,2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman s 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that

meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman s challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book s final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of na ve notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for

children in relative isolation growth measurements immunization status and general health of the children were good but children evidenced diets high in sugar and many suffered severe dental problems present day caregivers were engaged in dialogue about problem parenting behaviors that had developed a generation earlier during a time of massive acculturation stress and population growth namely the overuse of scolding of children without attached explanations and overt favoring of specific children over others in the family The study presents present day rearing strategies and ideas as summarized from interviews and data from more formal instruments and frames changes in the system within the broader historical social context
