Energy Issues and Options for Developing Countries United Nations, 2019-06-26 Originally published in 1989 This book presents the situation regarding energy provision and policy in developing countries It looks at Enhanced Oil Recovery Hydropower and small energy packages suitable for rural areas including renewable energies and the various needs and systems affected such as water

pumping and telecommunications Each section is broken down into salient issues and information is provided on environmental issues socioeconomic issues costs and limitations and what is considered the state of the art in each area The final section offers a view of the application of computing technology in energy planning

Energy Options Impact on Regional Security Frano Barbir, Sergio Ulgiati, 2010-09-02 Energy appears to be a fundamental driving force of economic and political strategies as well as planetary stability Energy related issues such as 1 the availability of new energy sources and viable technologies 2 the disparity in access to energy sources 3 the role of energy in our societies energy societal metabolism 4 the energy support to the life of our cities where about half of world population is going to live very soon and 5 the energy demand for food security all over the world are hot problems that humans will have to face within the framework of sustainability ecologically sound production and consumption patterns associated with socially acceptable life styles in terms of policies technological development and economic processes A coherent energy strategy is required addressing both energy supply and demand security of access development problems equity market dynamics by also taking into account the whole energy lifecycle including fuel production transmission and distribution energy conversion and the impact on energy equipment manufacturers and the end users of energy systems Issues of energy efficiency and rebound effect must also be taken into proper account In the short term the aim should be to achieve higher energy efficiencies and increased supply from local energy sources in particular renewable energy sources

Energy Abstracts for Policy Analysis, 1989

Sustainable Development and Innovation in the Energy Sector Ulrich Steger, 2005 Explores how these conflicting scenarios could be reconciled how can we shape a more sustainable energy system from the existing one and possible technological progress and innovations to enable a brighter future Addresses the reality that there exists no consensus on the extent to which innovations can really contribute to reconciling ever growing energy consumption availability of resources and the environment and the structural demands on any energy system Offers and explains a four point strategy Energy should according to its importance regain a top priority in the political arena highly targeted subsidies should be given for a limited amount of time to speed up the market introduction of energy efficient and regenerative techniques in analogy to the Dutch model Negotiated agreements and unilateral self commitments can subsequently ensure further market diffusion of sustainable energy innovations the basic research in energy should not be diminished but intensified instead

Working Fluid Selection for Organic Rankine Cycle and Other Related Cycles Attila R.

Imre, 2020-06-16 The world's energy demand is still growing partly due to the rising population partly to increasing personal needs This growing demand has to be met without increasing or preferably by decreasing the environmental impact One of the ways to do so is the use of existing low temperature heat sources for producing electricity such as using power plants based on the organic Rankine cycle ORC In ORC power plants instead of the traditional steam the vapor of organic materials

with low boiling points is used to turn heat to work and subsequently to electricity These units are usually less efficient than steam based plants therefore they should be optimized to be technically and economically feasible The selection of working fluid for a given heat source is crucial a particular working fluid might be suitable to harvest energy from a 90 geothermal well but would show disappointing performance for well with a 80 head temperature The ORC working fluid for a given heat source is usually selected from a handful of existing fluids by trial and error methods in this collection we demonstrate a more systematic method based on physical and chemical criteria
