Small Trees:

400 Trees and Shrubs for Small Spaces Diana Miller, 2008-01-01 Trees and shrubs are a valuable asset to a garden bringing structure shade year round interest and the all important vertical dimension But choosing the right ones for small gardens is a fine art and it s all too easy to end up with heavyweight shrubs overtaking the border dysfunctional climbers and trees outgrowing their designated spaces In this practical reference woody plant expert Diana Miller takes the anguish out of the process by recommending plants and cultivation techniques that excel in small garden spaces Small gardens require careful planting and the book starts by considering plants that fulfil a particular design function such as trees that provide the right levels of shade for an underplanting of choice bulbs columnar or weeping trees for very restricted spaces and specimen shrubs that provide an effective foil for herbaceous perennials in a mixed border At the heart of this book is a comprehensive plant directory that provides detailed descriptions including full cultivation advice for over 400 top performing trees and shrubs Further advice on pruning information on planting to encourage wildlife and handy lists that allow readers to search by colour height and other characteristics are invaluable Small Trees for the Tropical Landscape

Fred D. Rauch, Paul R. Weissich, 2009-07-23 Over the past several decades the U S cityscape has changed radically Large areas have been cleared of natural vegetation to accommodate new development The urban forest which consists of all city trees natural and planted has been severely and negatively impacted A 2003 study indicates that we are losing through clearing and grading four trees for every one planted This is a wake up call for greatly increased planting in the urban forest and the need to popularize small trees defined as trees that grow up to thirty feet high for diminished city spaces Small Trees for the Tropical Landscape describes and illustrates 129 species and subspecies and 48 named varieties cultivars and forms plus 23 hybrids appropriate for the home garden and confined public landscape spaces The authors have also included a section on Tailored Small Trees large shrubs that are readily transformed into small trees through intelligent selective pruning They identify and describe 67 species and subspecies 40 named varieties cultivars and forms and 21 hybrids that are appropriate for this conversion Several appendices will assist the gardener with tree selection for specific purposes screens and windbreaks coastal gardens edible fruit and colorful flowers and foliage Species that may cause skin irritation or that are poisonous are identified in the text as are those trees with the ability to fix nitrogen The authors also warn against planting a number of species known to be invasive in Hawai i and advise caution when planting others that have the potential to escape cultivation and become weeds **Small Trees** Andrew Mikolajski, 2001 This is an at a glance reference to more than 60 trees advising on choosing ornamental trees for different seasonal effects *Growing Shrubs and Small Trees in Cold*

Trees in Colorado Dennis Lee Lynch, 2002 Colorado's forests are at risk to forest health problems and catastrophic fire. Forest areas at high risk to catastrophic fire commonly referred to as Red Zones contain 2.4 million acres in the Colorado Front Range and 6.3 million acres Statewide. The increasing frequency, size, and intensity of recent forest fires have prompted large appropriations of Federal funds to reduce fire risk and improve fire protection. Experimental ecological restoration studies using thinning and prescribed fire have been conducted at several locations across the State during the past 5 years to determine if high risk areas could be treated to improve forest health and reduce the potential for catastrophic fires. These studies established that 80 to 96 percent of the trees removed to improve ecological conditions were between 5 and 11.9 inches in diameter. Some trees 12 inches and larger in diameter had to be removed to properly apply ecological prescriptions and typically comprised 4 to 18 percent of the trees removed. The projects studied had profit margins of 1 percent. Pines Partnership 6 percent. Mixed Conifer Project a loss of 78,000. Chessman Reservoir Trumbull Project and required subsidies of 779 per acre. Fox Run and 679 per acre. Air Force Academy. A search for opportunities to use small diameter trees from these projects was conducted as part of an effort to improve the financial feasibility of forest restoration. A previous study *Wood Use in Colorado at the Turn of the Century* Lynch and Mackes 2001 describes in detail the various types and quantities of wood products used in the State and identifies where products came from. Using this study the authors identified potential products that might be manufactured from small diameter trees removed in restoration thinnings. The potential opportunities for using wood are listed in two categories: 1 existing products, processes and technology and 2 new products, processes and technology. Products are arranged within each category in order of increasing complexity of processing and technology. Estimates of the potential retail market value for each product are presented. Examples of existing product opportunities include Christmas trees, mine props, firewood, posts and poles, rough sawn lumber and timbers, and oriented strandboard. Examples of new products and processes include structural roundwood, biomass energy and wood pulp. The report concludes that future restoration programs must be designed to provide a consistent supply of raw material to processors. It also recognizes that there is no single product that will utilize all small diameter trees from Red Zone areas. Instead, a stable, diverse wood industry appears to be the most desirable future.
