Epstein, Rafe Mazzeo, 2013-04-07 This book provides the mathematical foundations for the analysis of a class of degenerate elliptic operators defined on manifolds with corners which arise in a variety of applications such as population genetics mathematical finance and economics The results discussed in this book prove the uniqueness of the solution to the Martingale problem and therefore the existence of the associated Markov process Charles Epstein and Rafe Mazzeo use an integral kernel method to develop mathematical foundations for the study of such degenerate elliptic operators and the stochastic processes they define The precise nature of the degeneracies of the principal symbol for these operators leads to solutions of the parabolic and elliptic problems that display novel regularity properties Dually the adjoint operator allows for rather dramatic singularities such as measures supported on high codimensional strata of the boundary Epstein and Mazzeo establish the uniqueness existence and sharp regularity properties for solutions to the homogeneous and inhomogeneous heat equations as well as a complete analysis of the resolvent operator acting on Hilbert spaces They show that the semigroups defined by these operators have holomorphic extensions to the right half plane Epstein and Mazzeo also demonstrate precise asymptotic results for the long time behavior of solutions to both the forward and backward Kolmogorov equations **Operator Theory and Analysis** H.
