Smarter Than Man Intelligence In Whales Dolphins And Humans:

Smarter Than Man? Karl Erik Fichtelius, Sverre Sjölander, 1972 *The Sounding of the Whale* D. Graham Burnett, 2022-12-22 This wonderful book documents the interplays among science conservation and politics in the evolving career of the whale over the last century William Perrin Senior Scientist for Marine Mammals at the Southwest Fisheries Science Center NOAA Fisheries Service From biblical times whales have breached in the human imagination as looming figures of terror power confusion and mystery In the twentieth century however our understanding of and relationship to these superlatives of creation underwent some astonishing changes and with *The Sounding of the Whale* D. Graham Burnett tells the fascinating story of the transformation of cetaceans from grotesque monsters useful only as wallowing kegs of fat and fertilizer to playful friends of humanity bellwethers of environmental devastation and finally totems of the counterculture in the Age of Aquarius When Burnett opens his story ignorance reigns even Nature was misclassifying whales at the turn of the century and the only biological study of the species was happening in gruesome Arctic slaughterhouses But in the aftermath of World War I an international effort to bring rational regulations to the whaling industry led to an explosion of global research and regulations that while well meaning were quashed or widely flouted by whaling nations the first shot in a battle that continues to this day The book closes with a look at the remarkable shift in public attitudes toward whales that began in the 1960s as environmental concerns and new discoveries about whale behavior combined to make whales an object of sentimental concern and public adulation A sweeping history grounded in nearly a decade of research *The Sounding of the Whale* tells a remarkable story of how science politics and simple human wonder intertwined to transform the way we see these behemoths from below ***The Psychobiology of Mind*** William R. Uttal, 2014-06-27 Originally published in 1978 this book develops a conceptual synthesis of the field of physiological psychology the science specifically concerned with the relationship between the brain and the mind It was designed to elucidate the important questions under investigation the basic intellectual and technical problems that were encountered and the significance of the major empirical results of the time Of equal or even greater importance is the author's derivation of the general principles relating brain and mind that had emerged after decades of modern research into this important question Included in the volume are historical and philosophical perspectives on the mind brain problem as well as extensive discussions of instruments methodology empirical findings and theory Here is a powerful heuristic tool that informs the reader about the concepts and ideas implicit in this science rather than simply exhaustively listing experimental results The author does not ignore findings he organizes them into three broad categories localization representation and learning then emphasizes the relationships among experiments This is a book that synthesizes integrates and stresses concepts principles and problems The careful organization of the book makes it especially useful for students of brain and mind at all levels *Human Paleopsychology* K. Bailey, 2013-08-21 First Published in 1986 In this book the author seeks to demonstrate his belief that any credible view must grapple not only with

human distinctiveness e.g. learning capacity language rationality and culture but the dark sides of senseless violence and social disorder as well. Any such grappling with the dark side must necessarily confront our animal natures as well as our distinctly human natures.

Are Dolphins Really Smart? Justin Gregg, 2013-09-26 Justin Gregg weighs up the claims made about dolphin intelligence and separates scientific fact from fiction.

The Uttal Tetralogy of Cognitive Neuroscience William R. Uttal, 2022-07-30 These four volumes originally published between 1973 and 1988 were intended to provide a broad survey of cognitive neuroscience a field known variously as physiological psychology or psychobiology in the 1970s and 1980s when the books were written. The general goal was to summarize what was known about the relation between brain and mind at that time with an emphasis on sensory and perceptual topics. Out of print for many years the Tetralogy is now available again as a set for the first time which is as the author envisaged it or as individual volumes.

Make It a Green Peace! Frank Zelko, 2013-04-03 Make it a Green Peace explores the complex intellectual and cultural roots of Greenpeace tracing the development of the organization from its emergence amidst the various protest movements of the 1950s and 1960s to the end of its volatile dramatic and at times quirky first decade in 1980.

Dolphins: Voices in the Ocean Susan Casey, 2018-01-23 From the author of *The Underworld Journeys to the Depths of the Ocean* and based on her bestselling adult work *Voices in the Ocean* A Journey into the Wild and Haunting World of Dolphins comes a thrilling journey for young readers into the spiritual scientific and sometimes threatened world of dolphins in an accessible format that engages as well as entertains. Inspired by an encounter with a pod of spinner dolphins off the coast of Maui author Susan Casey embarked on a two year global adventure to study these remarkable beings. Casey details the extraordinary connection between dolphins and humans including shared characteristics such as capacity for emotion playfulness sociability and intelligence the sophisticated navigation ability innate in dolphins and the dangers they face from people who aim to profit by putting them in captivity or far worse. Includes an 8 page photo insert that offers a glimpse of these magical creatures in their natural habitat.
