Smoke And Fire:

Federal Register ,2013-03 **Eating Smoke** Mark Tebeau,2012-09 During the period of America s swiftest industrialization and urban growth fire struck fear in the hearts of city dwellers as did no other calamity Before the Civil War sweeping blazes destroyed more than 200 million in property in the nation s largest cities Between 1871 and 1906 conflagrations left Chicago Boston Baltimore and San Francisco in ruins Into the twentieth century this dynamic hazard intensified as cities grew taller and more populous confounding those who battled it Firefighters death defying feats captured the popular imagination but too often failed to provide more than symbolic protection Hundreds of fire insurance companies went bankrupt because they could not adequately deal with the effects of even smaller blazes Firefighters and fire insurers created a physical and cultural infrastructure whose legacy in the form of heroic firefighters insurance policies building standards and fire hydrants lives on in the urban built environment In *Eating Smoke* Mark Tebeau shows how the changing practices of firefighters and fire insurers shaped the built landscape of American cities the growth of municipal institutions and the experience of urban life Drawing on a wealth of fire department and insurance company archives he contrasts the invention of a heroic culture of firefighters with the rational organizational strategies by fire underwriters Recognizing the complexity of shifting urban environments and constantly experimenting with tools and tactics firefighters fought fire ever more aggressively eating smoke when they ventured deep into burning buildings or when they scaled ladders to perform harrowing rescues In sharp contrast to the manly valor of firefighters insurers argued that the risk was quantifiable measurable and predictable Underwriters managed hazard with statistics maps and trade associations and they eventually agitated for building codes and other reforms which cities throughout the nation implemented in the twentieth century Although they remained icons of heroism firefighters cultural and institutional authority slowly diminished Americans had begun to imagine fire risk as an economic abstraction By comparing the simple skills employed by firefighters climbing ladders and manipulating hoses with the mundane technologies maps and accounting charts of insurers the author demonstrates that the daily routines of both groups were instrumental in making intense urban and industrial expansion a less precarious endeavor *The Codes Guidebook for Interiors* Sharon K. Harmon,Katherine E. The Basic Ways of Knowing

Govardhan P. Bhatt,1989 The book gives a penetrating and full length study of epistemology in the school of Bhatta Mimamsa The work is based on an intensive and critical study of the Sanskrit texts which have not been utilized by any other Oriental scholar so far It is very much different from other books on the subject because it not only discusses historically the epistemology of the Bhatta School but also discusses many really philosophical problems connected with epistemology in general and Indian epistemology in particular One of the most valuable features of the work is the comparative references which it makes to standard epistemologists of Western philosophy The book reaches the highest watermark in its line It compares and contrasts the Bhatta position on various issues with not only other Indian schools but also with some of the European philosophers like Russell Moore Reid Hume Mill and Kant In a sense it is an exercise in comparative philosophy This is inevitable as otherwise the position of the Bhatta School cannot be clarified and brought out in depth
