

One of the most important areas in looking at a horoscope is interpreting from the aspects indications of possible accidents; and the subject is made all the more difficult by defining what constitutes an accident. The author defines it as "a bodily mishap occasioned without intent either on the part of the sufferer or the agent (if any) inflicting it". There are various gradations of accidents, and in the research for this book, one of the primary considerations was to discover if possible any factors that are common to all serious accidents. Here with the evidence of statistics are 168 cases from Britain and the United States which will assist astrologers in examining charts.

People often ask if there is proof for astrology Astrologers are not so much worried about proving astrology as they are in using it to reveal nuance and detail In 1929 after writing four previous books Charles Carter 1887 1968 set his sights on discovering the astrological reasons why accidents happen and which people are most prone to them In part he wanted to test if astrological fundamentals were true or not Carter knew that astrology works but does it work the way it has long claimed or if it does not can the real rules be discovered by analysis This book is divided into two broad sections In the first Carter compiles raw sign and house placements of Sun Moon and planets along with the angular separation of pairs of planets to determine which planets in which signs in which houses and which specific angles produce the most accidents overall The results are surprising In the second section Carter analyzes specific accidents for common traits Sixteen different classes of accidents are analyzed among them drowning gunshots burns falls and railway accidents While the number of individual cases were limited Carter was able to determine critical degree areas New in this edition a list of local influences derived from Carter s work and a useful index This book was first published in 1932 **Dictionary Catalog of the**
