**The Self-sufficient House** Frank Coffee,1981      *The Zero-Carbon House* Martin Godfrey Cook,2011-09-16 Zero Carbon is an abstract concept for most people but we have lived energy profligate lifestyles for too long on finite fossil fuel resources We now face potential environmental catastrophe from climate change and global warming with a continuing exponentially expanding global population that doubles every four decades The capacity of the planet to reabsorb carbon dioxide is about two to three tonnes of carbon equivalent per person at current population levels of seven billion and therefore there is a desperate need for us to reduce our carbon footprint A way of helping to achieve this is to live in a zero carbon house and this will become UK legislation for new homes by 2016 This fascinating book covers all aspects of the zero carbon house from its evolution to achieving carbon neutrality in old and new homes as well as entire communities Includes an overview of zero carbon and how to achieve it on a global scale covers communities of zero carbon houses and provides inspirational examples of low carbon lifestyles Case studies show how principles are put into successful practice to save energy carbon money and the environment      **Housing and Planning References** ,1976      **A ^AHouse in the Sun** Daniel A. Barber,2016-10-13 A House in the Sun describes a number of experiments in solar house heating in the 1940s and 1950s It shows how resource limitations were seen as an opportunity for design to attain new relevance for social and cultural transformations      The Whole Building Handbook Varis Bokalders,Maria Block,2010-02-09 The Whole Building Handbook is a compendium of all the issues and strategies that architects need to understand to design and construct sustainable buildings for a sustainable society The authors move beyond the current definition of sustainability in architecture which tends to focus on energy efficiency to include guidance for architecture that promotes social cohesion personal health renewable energy sources water and waste recycling systems permaculture energy conservation and crucially buildings in relation to their place The

authors offer a holistic approach to sustainable architecture and authoritative technical advice on How to design and construct healthy buildings through choosing suitable materials healthy service systems and designing a healthy and comfortable indoor climate including solutions for avoiding problems with moisture radon and noise as well as how to facilitate cleaning and maintenance How to design and construct buildings that use resources efficiently where heating and cooling needs and electricity use is minimized and water saving technologies and garbage recycling technologies are used How to close organic waste sewage heat and energy cycles For example how to design a sewage system that recycles nutrients Includes a section on adaptation of buildings to local conditions looking at how a site must be studied with respect to nature climate and community structure as well as human activities The result is a comprehensive thoroughly illustrated and carefully structured textbook and reference

Armstrong, Glenn Garwood, Joyce Dinsmore, 1980 Design for Life Sim Van der Ryn, 2005 Design for Life The Architecture of Sim Van der Ryn surveys the work and principles of Sim Van der Ryn one of the world's most important leaders in the field of sustainable architecture Sharing his years of experience as a teacher and using his building designs as examples the author shows us that buildings are not objects but organisms and cities are not machines but complex ecosystems Fleeing Holland just weeks before Hitler's invasion the Van der Ryn family settled in the outskirts of New York City Young Sim grew up exploring the tiny pockets of grass puddles and swamps he found in Queens An avid high school art student he progressed to studying architecture in college But he found the pervading modernist style buildings to be emotionally cold and lacking human sensitivity He longed for a way to restore architecture back to life His breakthrough came during the frequent campus visits of R Buckminster Fuller who inspired him to think and design with the geometries of the natural world Design for Life shows how the young architect began to look at the world with new eyes and saw the shifting patterns in nature and how these patterns profoundly affect how we live and work in the structures we build Using his own projects and teaching experiences as examples the author reveals the evolution of his thinking and the emergence of a new process of collaborative design that honors the buildings users and connects them to the Earth The book shows how architecture has created physical and mental barriers that separate us from our world but how we can recover the soul of architecture and reconnect with our natural surroundings Sim Van der Ryn is the president of Van der Ryn Architects a Northern California firm known for its work in sustainable architecture He taught architecture and design at the University of California Berkeley for over 30 years inspiring a new generation to create buildings and communities that are sensitive to place climate and the flow of human interactions Appointed California State Architect in the 1970s by then Governor Jerry Brown Van der Ryn introduced the nation's first energy efficient government building projects His vision and persuasive skills heralded a golden age of ecologically sensitive design and resulted in the adoption of strict energy standards and disability access standards for all state buildings and parks As the author of six groundbreaking books about planning and design including Sustainable

Communities 1986 with Peter Calthorpe Ecological Design 1996 with Stuart Cowan and numerous articles Van der Ryn has helped inspire architects to see the myriad ways they can apply physical and social ecology to architecture and environmental design The author lives and works in Northern California across the Golden Gate Bridge from San Francisco
