Muskegowuck Athinuwick Victor P. Lytwyn,2002-03-06 The original people of the Hudson Bay lowlands often known as the Lowland Cree and known to themselves as Muskegowuck Athinuwick were among the first Aboriginal peoples in northwestern North America to come into contact with Europeans Muskegowuck Athinuwick challenges long held misconceptions about the Lowland Cree and illustrates how historians have often misunderstood the role and resourcefulness of Aboriginal peoples during the fur trade era Although their own oral histories tell that the Lowland Cree have lived in the region for thousands of years many historians have portrayed the Lowland Cree as relative newcomers who were dependent

on the Hudson's Bay Company fur traders by the 1700s In Muskegowuck Athinuwick historical geographer Victor Lytwyn shows instead that the Lowland Cree had a well established traditional society that far from being dependent on Europeans was instrumental in the survival of traders throughout the network of HBC forts during the 18th and 19th centuries

Wildlife Abstracts, 1957 A contextual study of the Caribou Eskimo kayak Eugene Yuji Arima, 1975-01-01 After a discussion of the place of material culture studies in modern anthropology the author shows the continuity of the Caribou Inuit kayak form from the Birnik culture The reconstruction of general kayak development is given in detail as well as a thorough coverage of construction and use of the kayak Published in English *The Northern Forest Border in Canada and Alaska* James A. Larsen, 2012-12-06 It is enough to work on the assumption that all of the details matter in the end in some unknown but vital way Edward O Wilson Biophilia Advances in knowledge of northern ecology have been so rapid that to undertake a synthesis of all the literature now available would be a major enterprise perhaps even a life's work and so it must be considered permissible to fill in a few gaps follow one's own inclinations leaving comprehensive syntheses to those willing to undertake them This is the rubric under which I have written reporting some of the more interesting data I and others have obtained over the years often diverging into discussions of plants soils climate and faunal relationships which have perhaps not previously been dealt with extensively or at least in quite the same way This is purely intentional since I find it difficult to summon up the needed enthusiasm at this late hour to write on topics which unfortunately for me have little attraction I have thus written for the pleasure derived from depicting perhaps at times as something of an impressionist a fascinating biotic region a captivating land a collection of interesting ecological problems environmental relationships to be discerned in part perhaps understood to some small degree perhaps one day to be modeled mathematically As Leo Szilard once wrote to be able to say even this much might be of some value Szilard 1960 **Catalog** Denver Public Library. Conservation Library, 1974 **Ecology of North America** Brian R. Chapman, Eric G. Bolen, 2015-04-09 North America contains an incredibly diverse array of natural environments each supporting unique systems of plant and animal life These systems the largest of which are biomes form intricate webs of life that have taken millennia to evolve This richly illustrated book introduces readers to this extraordinary array of natural communities and their subtle biological and geological interactions Completely revised and updated throughout the second edition of this successful text takes a qualitative intuitive approach to the subject beginning with an overview of essential ecological terms and concepts such as competitive exclusion taxa niches and succession It then goes on to describe the major biomes and communities that characterize the rich biota of the continent starting with the Tundra and continuing with Boreal Forest Deciduous Forest Grasslands Deserts Montane Forests and Temperate Rain Forest among others Coastal environments including the Laguna Madre seagrasses Chesapeake Bay and barrier islands appear in a new chapter Additionally the book covers many unique features such as pitcher plant bogs muskeg the polar ice cap the cloud forests of Mexico and the LaBrea tar pits Infoboxes have been added
