from heat related illnesses to extreme weather events Climate change affects not just the planet but the people who live on it In this book physician Alan Lockwood describes how global warming will be bad for our health Drawing on peer reviewed scientific and medical research Lockwood meticulously details the symptoms of climate change and their medical side effects Our global ecosystems create webs of interdependence that support life on the planet Lockwood shows how climate change is affecting these ecosystems and describes the resulting impact on health For example rising temperatures create long duration heat waves during which people sicken and die Climate change increases the risk for certain infectious diseases including malaria dengue fever West Nile virus Zika and Lyme disease Extreme weather and poor soil conditions cause agricultural shortfalls leading to undernutrition and famine There is even evidence that violence increases in warmer weather including a study showing that pitchers throw beanballs balls thrown with the intention of hitting the batter significantly more often in hot weather Climate change is real and it is happening now We must use what we know to adapt

to a warmer world and minimize adverse health effects make city buildings cooler with air conditioning and cool roofs for example and mobilize resources for predicted outbreaks of disease But Lockwood points out we also need prevention The ultimate preventive medicine is reducing greenhouse gas emissions and replacing energy sources that depend on fossil fuels with those that do not
