

Figure 5.4: Weight of a body is equal to the gravitational force between the body and the Earth.

5.2 MASS OF THE EARTH

Consider a body of mass m on the surface of the Earth as shown in figure 5.4. Let the mass of the Earth be M_e and radius of the Earth be R . The distance of the body from the centre of the Earth will also be equal to the radius R of the Earth. According to the law of gravitation, the gravitational force F of the Earth acting on a body is given by

$$F = G \frac{mM_e}{R^2} \quad \dots \quad \dots \quad \dots \quad \dots \quad (5.3)$$

But the force with which Earth attracts a body towards its centre is equal to its weight w . Therefore,

$$F = w = mg \quad \dots \quad \dots \quad \dots \quad \dots \quad (5.4)$$

$$\text{or} \quad mg = G \frac{mM_e}{R^2} \quad \dots \quad \dots \quad \dots \quad \dots \quad (5.5)$$

$$\therefore \quad g = G \frac{M_e}{R^2} \quad \dots \quad \dots \quad \dots \quad \dots \quad (5.6)$$

$$\text{and} \quad M_e = \frac{R^2 g}{G} \quad \dots \quad \dots \quad \dots \quad \dots \quad (5.7)$$

Mass M_e of the Earth can be determined on putting the values in equation (5.7).

5.3 VARIATION OF g WITH ALTITUDE

Equation (5.6) shows that the value of acceleration due to gravity g depends on the radius of

The Earth Mass:

A Conspiracy Website # 11 , The Planet Earth D. R. Bates, 2016-10-13 The Planet Earth Second Edition reviews remarkable advances in understanding the physical aspects of the Earth including technical developments that have made various new types of observation and measurement possible as well as a deepened understanding of the fundamental laws of nature that have given the necessary basis for the interpretation of many of the complex phenomena concerned Topics covered include the Van Allen radiation belts the Mohole project continental drift and polar wandering the theory of magnetic storms and aurorae and the possibility of extra terrestrial sources of life This book is comprised of 18 chapters and begins with an overview of the work and achievements of the International Geophysical Year The reader is then introduced to the Earth's physical properties such as the deep interior crust oceans climate and geomagnetic field as well as its origin age and possible ultimate fate Subsequent chapters explore the composition and structure of the Earth's atmosphere the general circulation of the atmosphere and oceans the ice ages meteorology and weather forecasting and experimental proof of the existence of the ionosphere The airglow aurorae and magnetic storms meteors cosmic radiation and radiation belts are also described The final chapter examines the genesis of life on Earth This monograph is intended for students and practitioners of planetary and geophysical sciences

Dynamics of the Earth V. I. Ferronsky, S.V. Ferronsky, 2010-06-28 In their search for solutions to problems concerning the dynamics of the Earth as a self gravitating body the authors have applied the fundamentals found in their book Jacobi Dynamics 1987 Reidel First satellite observations have shown that the Earth does not remain in hydrostatic equilibrium which forms the physical basis of modern geodynamics Secondly satellite data have established a relationship between the planet's polar moment of inertia and the potential of the Earth's outer force field which proves the most basic point of Jacobi dynamics This allowed the authors to revise their derivation of the classical virial theorem introducing the concept of a volumetric force and volumetric moment and so to obtain a generalized virial theorem in the form of Jacobi's equation The main dynamical effects are the kinetic energy of oscillation of the interacting particles which explains the physical meaning and nature of gravitational forces separation of shells of a self gravitating body with respect to its mass density differences in angular velocities of the shell's rotation continuity in variance of the potential of the outer gravitational force field together with reductions in the envelope of the interacting masses volumetric center of gravity the nature of Earth Moon and satellite precession the nature and generating mechanism of the planet's electromagnetic field the common nature of gravitational and electromagnetic energy and other related issues The work is a logical continuation of the book Jacobi Dynamics and is intended for researchers teachers and students engaged in theoretical and experimental research in various branches of astronomy geophysics planetology and cosmogony and for students of celestial statistical quantum and relativistic mechanics and hydrodynamics

THE DYNAMIC EARTH SYSTEM, Fourth Edition
PATWARDHAN, A. M., 2020-06-01 Addressed to the undergraduate and postgraduate students pursuing studies in the broad

interdisciplinary field of Earth Science this thoroughly revised book in its Fourth Edition is aimed at facilitating the comprehension between the pre planetary history and the subsequent geological processes of the Earth system This is done keeping in mind the current interest in exoplanets and the evolution of the life supporting crustal composition of the Earth much different from that of the other planets in terms of the Earth s internal heat density distribution and the strong magnetic field due to the dominant presence of metallic Fe in its core The new edition draws the attention of the reader to the different surface gravity features and the internal compositional structures of the Earth Moon and the Sun acquired during the Hadean Examples of lithospheric movements rifting subduction and the continued mantle crust interaction from Indian and Southeast Asian geology would bring the readers close to interlinking these tectonic processes to the genesis of igneous sedimentary and metamorphic rocks as well as to the episodes of mineralizations Emphasizing these dynamic processes the text focuses on the constitution of oceans the causes of mass extinctions and the evolution of life forms the biogeochemical cycles of elements and also on the life protecting ozone layer of the stratosphere all unique to the Earth System The student is sensitized towards the natural hazards of frequent volcanic eruptions earthquakes tsunamis floods and climate change besides explicating the threats posed by global warming atmospheric and hydrosphere pollution caused by the industrial emanations and indiscrete waste disposal

KEY FEATURES Each chapter is replete with examples illustrations tables and figures to make reading more fruitful and enriching Chapter end summary helps in recapitulation of the concepts discussed Additional Reading provided at the end of each chapter directs the readers to the vast source of information

NEW TO THE FOURTH EDITION Considering the growing global interest in locating a habitable exoplanet like the Earth and in exploring the Moon and the Mars the present edition thoroughly updates the information about the geochemical processes unique to the Earth System that gave rise to the life supportive crust oceans and the atmosphere the role played by plate tectonics in forming the igneous sedimentary and metamorphic rocks mineral deposits and also in the evolution of life the geo environmental hazards of volcanic eruptions earthquakes floods tsunamis droughts and desertification the growing adoption of solar hydro wind and nuclear energy in power generation and in management of clean environment

How to Swindle by Faking Science P. S. J. (Peet) Schutte, 2012

How To Swindle by Faking Science: then you are going to read what is the mother of all the conspiracies in science, which is about how science applies mind control by processing thought control. This is the truth. Science practicing physics about Astronomy, Cosmology, and everything to do with Stars, the Cosmos, or Universe. Galactica is under a Conspiracy to hide and conceal the truth. Does this sound far-fetched? I challenge you to read this book and then still think it is far-fetched. Read what science hides, and I will prove every word. This book reveals what Science in Physics concerning Astronomy, Cosmology hides for hundreds of years. You read how science swindles to make Newton seem truthful, and every time they find out how nature works, nature destroys Newtonian concepts completely. This is the conspiracy. For the first time in history, I prove gravity is P . But if science was as unblemished and perfect as physicists say it is, then my work has no place to be. This then is the attitude in science about my work. To counter that claim, I prove that there is a mother conspiracy in place about covering the misconceptions hidden under a cloak of false, lily-white purity and truthfulness. To hide Newton's indefensible incorrectness, science created a mother conspiracy, which I reveal. There is a mother conspiracy hiding mistakes in place. Science benefits from and builds upon this mother conspiracy being in place while I can't get further with my work while it is in place. It's imbedded in the teaching and learning process students undergo in learning Newtonian dogma. Students are brainwashed by the instigation of mind control that forces students to accept the dogma. I prove gravity has a value of P still by keeping me quiet. I am perverted to introduce a new cosmic vision showing how the Universe forms when enlisting the four phenomena. How it works in science: Newton gets undeserved, undue credit in discrediting nature. I show how singularity takes on every shape and space we know. Are you up to facing the truth about what you thought is more righteous than God? Read this and see what those in science hide to make them seem so surreal.

Schalinski, 2012-12-06 The past year has produced some of the most exciting results in the history of astronomy particularly in the area of planets outside our solar system Only a half year before our meeting in Toledo Spain the first unambiguous detection of planet sized masses orbiting main sequence stars were reported Since that time evidence for a new exo planet has been reported almost at the rate of about once per month Some of these objects are likely to turn out to be very low mass stars but something like half show characteristics Jupiter like mass and near zero orbital eccentricity which appear to be unique to planets Almost at the same time that giant planets were being discovered regularly the two major space agencies ESA and NASA have identified searches for and detailed study of Earth like planets as a major priority for the future In ESA's Horizon 2000 Plus programme an infrared interferometer has been proposed as a possible future Cornerstone mission Similarly scientists in the US produced the Road Map for the Exploration of Neighboring Planetary Systems ExNPS which provided NASA with a long term plan which leads also to an infrared interferometer in space to study hypothetical Earth like worlds beyond our Solar System Such an observatory is designed to search for the thermal emission from a family of planets using interferometric nulling to remove the contaminating light from the central star
