Pasavento, Shane Smoleny, 2015-01-20 Look to the stars for a whole new approach to market cycle forecasting. A Trader's Guide to Financial Astrology is the definitive guide to trading market cycles based on astrological data. Written by a highly respected technical analyst, this book makes the connection between the movements of planets and the volatility of the

market Readers can draw upon one hundred years of historical data as they learn how to spot correlations from the past and refer to planetary and lunar data for the next five years as they shape their own strategy The book covers the principles of astrological forecasting as applied to the financial markets explaining what to watch for and how to interpret planetary and lunar activity plus expert insight on everyday practical application A study by the Federal Reserve Bank of Atlanta determined that the U S stock markets tend to be negatively affected by geomagnetic storms and the Royal Bank of Scotland demonstrated that a trading system based on the phases of the moon would have outperformed the market A Trader s Guide to Financial Astrology shows traders how to tap into the planetary forces that influence market activity Readers will Learn how planetary and lunar movements relate to the financial markets Draw upon 100 years of historic correlations and five years of forecast data Forecast long term and short term activity based on planetary relationships and lunar movement Enter the markets at key turning points using price patterns and other tools When integrated with technical trading patterns astrology can be an effective way of shifting perspective and approaching the market differently For traders who have always wanted to know what to do when Mercury is in retrograde or the moon is new A Trader s Guide to Financial Astrology provides information and insight from a leading market educator The Shape of God Terry David Silvercloud,2007 An explanation about the nature of material reality and motion how solids liquids and gases come to be the nature of the Sun and planets the importance and nature of shapes and dimensional values human evolution the nature of religions and God problems upon Earth and possible solutions the history of Islam the history of Christianity the history of the Bible the history of the Knight s Templar the history of the Freemasons notes about wave lengths and frequencies I will prove to you that the Earth has never made a circle nor an ellipse around the Sun and never will I will prove to you that something DOES go much faster than light and that it does indeed curve space The stuff that goes faster than light is the sub atomic stuff that presents to us the stuff we call matter How about that And that s just the beginning of surprises **The Fourth Source** Robert J. Tuttle,2012 This book describes how the effects of nature s own nuclear reactors have shaped the Earth the Solar System the Universe and the history of life as we know it It focuses on observed effects that are poorly explained by our standard theories identifies certain errors in those theories and shows how these effects are caused by natural nuclear fission reactors The theory of Plate Tectonics is wrong and it is shown that expansion of the Earth causes continental drift A physically reasonable mechanism is proposed for expansion and observational data are presented to show that this occurs Evolution is explained as punctuated equilibrium with mutations caused by abrupt surges of radiation and related life forms that have been interpreted as seperate species are actually the result of radiation injury This view is particularly effective as applied to humans The ability of the dinosaurs to live so large is explained by use of Earth Expansion and a more massive atmosphere to provide buoyancy and effective transpiration of oxygen These effects also explain how pterodactyls and ancient birds could fly Expansion induced by impacts at the end of the Cretaceous caused the atmosphere to thin and the dinosaurs collapsed

Analysis of geological and biological data supports this The astronomical distance scale is shown to be wrong based on the misconception that trigonometric parallax is an absolute measurement It isn't and the method is led astray by the overwhelming number of asteroidal fragments masquerading as stars The measurements of an expanding Universe are shown to be in error and an expanding Universe is not needed by an alternative interpretation of Einstein's equations This interpretation is based on the equal creation of matter and antimatter which is known to occur Spiral galaxies are not vast Island Universes of stars as we have thought but are shown to be the strewn fields of debris from the nuclear fission detonation of distant planets The Universe is not made up of 96% Dark Matter and Dark Energy but is instead very ordinary Abundant evidence and references provide support for all these interpretations This book opens new opportunities for research by correcting several fundamental errors in our concepts of the Earth Life and the Universe **Qualitative**
