Review , 1989 *Turbulent Waters* Ralph C. Bryant, 2004-05-13 Today s world is organized politically into nation states with sovereign national governments But as Ralph C Bryant explains in *Turbulent Waters* the world s economic structure is outgrowing its political structure The economic links among nations have increased more rapidly than economic activity itself As economic integration has proceeded borders have become more porous differences among national economies have eroded and the policy autonomy of national governments has been undermined Collective governance problems increasingly spill across national borders and thus grow in importance relative to problems of domestic governance The evolving need for international cooperation and cross border collective governance is likely to be the single most prominent feature of world politics and economics for at least the next half century The progressive integration of the world economy often called globalization has been especially dramatic for financial activity Cross border financial transactions facilitate saving and investment and thereby advance the well being of individuals But they can also generate turbulence and instability Most individuals are unsure whether financial globalization promotes or threatens prosperity for a majority of the world s people Bryant explains basic concepts about financial activity and collective governance distills their international dimensions and enables general readers to acquire a solid grasp of the key policy issues that national governments must resolve He provides fresh insights about what is often termed the international financial architecture But he also casts his net far wider the book s ambitious goal is no less than to outline a pragmatically sound vision for the evolution of international governance for the world economy and financial system **Boston College Environmental Affairs Law Review** Boston College. Foundations of social ecological economics Clive L Spash, 2024-03-05 This book explores radical dissent from orthodox mainstream economics and sets out a theoretically grounded vision for the emerging paradigm of social ecological economics At the heart of this paradigmatic shift lies an acknowledgement of the inextricable embeddedness of economies in biophysical reality and social structure The struggle for this transformative vision unfolds through a critical examination of mainstream environmental thought followed by a nuanced evaluation of contributions from Marxists socialists critical institutionalists feminists and Post Keynesians grappling with the urgent environmental crisis Synthesising insights from these diverse and heterodox schools the book navigates the philosophical underpinnings of science embracing a critical realist approach that challenges not only mainstream economic thought but also eclectic pluralism relativism and strong constructionism The question of what constitutes revolutionary science is explored in light of works by Kuhn Schumpeter and Neurath emphasising the pivotal role of values and ideology in works from Marx to Gramsci Building on these radical and philosophical foundations the book articulates a preanalytic vision of social ecological economics dismantling entrenched notions of growth and efficiency in favour of a framework centered on social provisioning and needs embedded in ethics In a thought provoking conclusion the book applies its analytical lens to the multiple crises of modernity within industrialised capital accumulating economies An agenda for social ecological transformation toward diverse alternative economies emerges providing a compelling call to action in the face of contemporary challenges
