Interpretative Methodology in Theory and Practice Fu-Lai Tony Yu,2020-02-15 Contemporary social science in general and economics in particular are dominated by the method of logical positivism in the British tradition In contrast to the British philosophy Subjectivism and Interpretative Methodology in Theory and Practice adopts subjectivism and interpretation methodology to understand human behavior and social action Unlike positivism this subjectivist approach with its root in German idealism takes human experience as the sole foundation of factual knowledge All objective facts have to be interpreted and evaluated by human minds In this approach experience knowledge expectation plans errors and revision of plans are key elements Specifically this volume uses the subjectivist approach originated in Max Weber s interpretation method Alfred Schutz s phenomenology and Peter Berger and Thomas Luckmann s sociology of knowledge to understand economic and social phenomena The method brings human agency back into the forefront of analysis adding new insights not only in economics and management but also in sociology politics psychology and organizational behavior Introductory

persistent and consistent manner The Labor of Development Patrick Heller,2018-10-18 The state of Kerala in southern India is notable for the ways in which lower class mobilization and state intervention have combined to create one of the most successful cases of social and redistributive development in the Third World In contrast to predictions that labor militancy in developing countries threatens to overload fledgling democratic institutions and derail economic growth The Labor of Development shows that the political and economic inclusion of industrial and agricultural workers in Kerala set the stage for a democratically negotiated capitalist transformation When compared to the other Indian states Kerala s departure from the national pattern is tied to its history of social movements and highlights the significance of understanding sub national patterns of democratic consolidation and state building The case of Kerala provides important theoretical insights into the circumstances under which the expansion of political and social citizenship can become the basis for managing economic change Using examples from agriculture industry and the informal sector Patrick Heller examines the institutional and political dynamics through which the demands of organized labor and the imperatives of capitalist growth have evolved from a period of open conflict and stagnation to one of class compromise He also demonstrates that the Kerala model has broad ramifications for understanding the relationship between substantive democracy and market economies in low income countries

The Economy of Icons Ernest Sternberg, 1999-09-30 Though many still think that we live in an information economy Ernest Sternberg asserts that the driving force in 21st century capitalism is not information but image Through studies of food processing real estate development tourism movies and labor performances he examines how businesses endow products with evocative meaning It has become common wisdom that we live in a postindustrial information society in which data and calculation underlie wealth But now that information is as routinely produced as industrial or agricultural goods businesses are discovering that they best achieve competitive advantage by producing what consumers most dearly seek personal meaning The 21st century economy produces just that not merely information but evocative images not just commodities but meaning laden icons As Sternberg shows foods now appeal through their sensuality and nostalgia houses and stores draw customers through their exoticism people sell their labor through the deliberate performance of the self for the market and tourist destinations offer up carefully crafted thematic experiences Whereas farms factories and information processors once stood at the core of the economy now movie studios do producing the product valued above all meaningful content from which downstream firms acquire the themes that animate desire Now that meaning pervades production Sternberg argues modes of inquiry once reserved for the humanities make sense in the study of the economy Drawing on art history and aesthetics he introduces iconography as a mode of cultural analysis adapted to the study of commercial production Through comparative studies of diverse economic sectors ranging from food processing to tourism Sternberg carries out an iconographic analysis of the new economy This is a provocative study for scholars students and professionals dealing with marketing and consumer research culture and media studies socio economics and economic geography

Theory of Economic Development Joseph Schumpeter, 2017-07-05 Schumpeter proclaims in this classical analysis of capitalist society first published in 1911 that economics is a natural self regulating mechanism when undisturbed by social and other meddlers In his preface he argues that despite weaknesses theories are based on logic and provide structure for understanding fact Of those who argue against him Schumpeter asks a fundamental question Is it really artificial to keep separate the phenomena incidental to running a firm and the phenomena incidental to creating a new one In his answers Schumpeter offers guidance to Third World politicians no less than First World

businesspeople In his substantial new introduction John E Elliott discusses the salient ideas of *The Theory of Economic Development* against the historical background of three great periods of economic thought in the last two decades The Politics of Making Kinship Erdmute Alber, David Warren Sabean, Simon Teuscher, Tatjana Thelen, 2022-12-09 The long tradition of Western political thought included kinship in models of public order but the social sciences excised it from theories of the state public sphere and democratic order Kinship has however neither completely disappeared from the political cultures of the West nor played the determining social and political role ascribed to it elsewhere Exploring the issues that arise once the divide between kinship and politics is no longer taken for granted *The Politics of Making Kinship* demonstrates how political processes have shaped concepts of kinship over time and conversely how political projects have been shaped by specific understandings idioms and uses of kinship Taking vantage points from the post Roman era to early modernity and from colonial imperialism to the fall of the Berlin Wall and beyond this international set of scholars place kinship centerstage and reintegrate it with political theory *The Economics of Sustainability* John C.V. Pezzey, Michael A. Toman, 2017-09-08 Before the late 1980s when the ideas of sustainability and sustainable development to the forefront of public debate conventional neo classical economic thinking about development and growth had rarely given any consideration to the needs of future generations or the sustainability of natural resource use Defining sustainability broadly as intergenerational fairness in the long term decision making of a whole society and using established economic concepts this selection of refereed journal articles brings a famously ill defined concept into sharp focus providing academics at all levels with a formidable research tool Spanning thirty years of the most important philosophical theoretical and empirical contributions from both critics and defenders of neo classical assumptions and methods of economic analysis this focused collection of papers constitutes a unique balanced resource on the full range of intellectual debates surrounding the economics of sustainability
