Nature's Building Blocks John Emsley, 2002-04-04 What is the most common element in the universe Can you name the noble gases Everything we see around us is made of chemical elements but most of us know little about them Penned by award winning science writer John Emsley Nature s Building Blocks explains the what why and wherefore of the chemical elements Arranged alphabetically from Actinium to Zirconium it is a complete guide to all 115 of those that are currently known with more extensive coverage of those elements we encounter in our everyday life The entry on each element reveals where it came from what role it may have in the human body and the foods that contain it There are also sections on its discovery its part in human health or illness the uses and misuses to which it is put and its environmental role Readers discover that the Earth consists of around 90 elements some of which are abundant such as the silicon and oxygen of rocks and soils while some are so rare that they make gold seem cheap Our own bodies contain about 30 elements some in abundance some in trace amounts some vital to our health and some that are positively harmful A list of the main scientific data and outline properties are given for every element and each section ends with an Element of Surprise which highlights some unexpected way in which each element influences our everyday life Both a reliable reference source and a high browsable account of the elements Nature s Building Blocks offers a pleasurable tour of the very essence of our material world
