The Endometrium As A Target For Contraception Ernst Schering Research Foundation Workshop 18:

The Endometrium as a Target for Contraception Henning Martin Beier, M.J.K. Harper, K. Chwalisz, 2013-06-29 This book is a summary of the present state of the art in the physiology of both endometrial receptivity and implantation. Although these physiological processes are today considered as limiting factors responsible for both infertility and low gestation rates in patients undergoing assisted reproductive techniques, they may on the other hand represent future targets for contraception. Several aspects of endometrial receptivity and implantation are discussed in this book. In the first part, basic aspects of the cell biology of endometrial functions as well as the molecular aspects of endometrial receptivity and implantation are discussed. Subsequently, the clinical and experimental approaches to endometrial contraception are considered. Finally, some basic questions are raised pointing to the need for further research in order to gain a better understanding of the implantation process and the development of new contraceptive strategies including the inhibition of endometrial receptivity. The organizers of the workshop and the editors of the volume hope that this book will encourage both universities and the pharmaceutical industry to initiate and/or continue research on endometrial receptivity and implantation. **The**

Endometrium Stanley R. Glasser, John D. Aplin, Linda C. Giudice, Siamak Tabibzadeh, 2002-05-16 The Endometrium is devoted to a comprehensive multi-disciplinary account of the uterine endometrium. This book is the first to define the regulatory biological interrelationships between epithelial and stromal cell phenotypes, endothelial cells, extracellular matrix, and immunobiological elements. It highlights their relevance to clinical conditions. **Mood and Anxiety Disorders in**

Women David Castle, Jayashri Kulkarni, Kathryn M. Abel, 2006-02-23 Mood and anxiety disorders in women represent an increasingly important area of research and treatment development. The authors take a broad biopsychosocial and developmental approach to the issues, beginning with anxiety disorders in adolescence and progressing through the life phases of women to menopause and old age. All the disorders are covered from anxiety and borderline personality disorder to stress and late life depression. Particular attention is paid to questions of vulnerability, epidemiological and clinical evidence showing gender differences in such disorders, aetiological explanations in terms of biological, including hormonal, as well as psychosocial parameters and treatment implications. **American Book Publishing Record**, 1997 Reversible

Suppression of Menstruation with Antiprogestins Robert M. Brenner, 2000 The goal of this research was to utilize nonhuman primates to explore a safe reversible method of menstrual suppression through progesterone antagonist therapy. During a normal menstrual cycle, progesterone (P) secreted in the luteal phase of the cycle primes the endometrium for menstruation. When P levels fall at the end of the cycle, menstruation ensues. Progesterone antagonists, antiprogestins (PAs), are compounds that bind to the P receptor and block P action. Continuous blockade of P action during the menstrual cycle by PAs would prevent progestational priming of the endometrium and thus inhibit menstruation. Any unopposed effects of estrogen on the endometrium would also be blocked by another effect of PAs, the endometrial antiproliferative or so-called noncompetitive

antiestrogenic effect The mechanism underlying the antiestrogenic effect of PAs was also investigated and new insights were gained on the role of androgens in this effect Our final report indicates that PA therapy is a reliable reversible suppressor of menstruation that the PA can be delivered both systemically vaginally and through an intrauterine device and that endometrial androgens may play a role in the endometrial antiproliferative effects of PAs Once clinically tested and validated in women PA therapy should provide the military woman with several new options for control of her menstrual periods
