## **The Arts And Their Interrelations:**

**The Arts and Their Interrelations** Thomas Munro, 1967 *The Arts and Their Interrelations* is the first book of its kind. It did much to stimulate the present educational trend toward comparative surveys of the arts. This enlarged edition opens the way to further progress in the understanding of the arts from a standpoint of content, form, and function. Most books on the arts today are highly specialized, focusing on one art form, artist, style, or collection. By contrast, *The Arts and Their Interrelations* deals with all the arts: the visual arts, literature, music, theater, film, and industrial arts. Dr. Munro offers a theoretical explanation of these arts which is applicable to works of any place and period. The nature of each major art form of today is outlined, and comparisons are made with earlier art forms with respect to media and psychological materials, to forms, techniques, and processes employed, and to functions served in society. A concise historical sketch of the changing concepts of art and systems of classification since the time of Plato is also presented. From publisher's description. **The Arts and Their Interrelations, by Thomas Munro** Thomas Munro, 1949 **The Arts and Their Interrelations** Thomas Munro, 1949 **The Arts and Their Interrelations** Harry Raphael Garvin, James M. Heath, 1979 This issue of the *Bucknell Review* studies the interrelations among the arts by exploring, comparing, and contrasting the treatment of the same subject matter by a poet, a composer, a painter, a novelist, a film director, and a sculptor. It is hoped that these essays will suggest some next steps in the exploration of the arts. Illustrated Visual Arts: The arts and their interrelations, by T. Munro, 1961

### **Aggregation Functions Considering Criteria Interrelationships in Fuzzy Multi-Criteria Decision**

#### **Making: State-of-the-Art**

LE SUN, HAI DONG, ALEX X. LIU, Aggregation function is an important component in an information aggregation or information fusion system. Interrelationships usually exist between the input arguments, e.g., the criteria in the multicriteria decision making of an aggregation function. In this paper, we make a comprehensive survey on the aggregation operators (AOs) that consider the argument interrelationships in crisp and fuzzy settings. In particular, we discuss the mechanisms of modeling the argument interrelationships of the Choquet integral (CI), the power average (PA), the Bonferroni mean (BM), the Heronian mean (HM), and the Maclaurin symmetric mean (MSM) operators and introduce their extended, e.g., generalized or weighted forms and their applications in different fuzzy sets. In addition, we compare these various types of operators and summarize their advantages and disadvantages. Furthermore, we discuss the applications of these operators. Finally, we identify some future research directions in the AOs considering the argument interrelationships. The reviewed papers are mainly about the development of the CI, the PA, the BM, the HM, and the MSM in fuzzy MCDMs, most of which fall in the period of 2009–2018.
