**The Global Energy Trap and a Way Out** Frank Parkinson, 2017-02-14 It is now generally accepted that the world's climate has entered into a phase of warming with potentially disastrous consequences for the planet but there is no agreement about how to deal with it The global energy trap refers to the fact that our civilisation has been built on energy derived from fossil fuels and when these are exhausted there must be a collapse of some kind However long before we have run them down to exhaustion we shall have pushed atmospheric pollution and global warming beyond a tipping point In this situation there is no rational choice except to develop clean renewable energy sources with all deliberate haste How this can be done is The Global Energy Trap and a Way Out's central theme and is fully explored at length Although the answer is

largely one of innovative engineering other social and economic factors must be taken into account Dr Parkinson provides us with an informative and accessible overview of the current situation we find ourselves in as well as providing us with ideas for the future The Global Energy Trap and a Way Out will appeal to those interested in all aspects of the increasingly urgent problem of global warming *Governing the Atom* John Byrne, Steven M. Hoffman, 2020-02-21 Promoted as a form of limitless low cost energy without the polluting effects of its fossil fuel counterparts nuclear power has enjoyed unparalleled support in several countries Despite the development of an extensive set of policy and institutional mechanisms to foster its use nuclear technology has been troubled by a wide range of problems and continues to pose risks many believe are far greater than society should accept The legacy of failure ranges from catastrophic accidents like that at Chernobyl to the declaration of bankruptcy by the Washington Public Power Supply System *Governing the Atom* explores why support for the technology remains substantial The first part of this volume examines the social institutions that have accompanied the development of nuclear power The second part details the numerous accommodations which have been required of society beginning with the technology's impact on communities and geographic regions particularly affected by mining and milling The technology's inherent tendency towards normal accidents and the conflict between expert and public opinion on the dangers involved is examined as are the on going problems of waste disposal and decommissioning The volume concludes with an examination of nuclear power developments in France Germany Russia and the Commonwealth of Independent States Eastern Europe Korea and Japan The volume provides a needed vehicle for the timely consultation and dissemination of current research on important energy policy issues *Governing the Atom* provides insightful commentary regarding the initiation and development of nuclear technology It will be of interest to policymakers energy and environmental experts sociologists and historians of technology and all those interested in the problem of democracy in a technological society
