## **The Basin Of Mexico Critical Environmental Issues And Sustainability:**

**The Basin of Mexico** Exequiel Ezcurra, 1999 The book examines some of these questions in a historic perspective arguing that the depletion of natural resources in the Basin of Mexico is not just a recent phenomenon **BOOK JACKET**

**Mexico City's Water Supply** Academia Nacional de Ingenieria, A.C., Academia Nacional de la Investigacion Cientifica, A.C., National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Commission on Geosciences, Environment, and Resources, The Joint Academies Committee on the Mexico City Water Supply, 1995-06-08 This book addresses the technical health regulatory and social aspects of ground water withdrawals water use and water quality in the metropolitan area of Mexico City and makes recommendations to improve the balance of water supply water demand and water conservation The study came about through a nongovernmental partnership between the U S National Academy of Sciences National Research Council and the Mexican Academies of Science and Engineering The book will contain a Spanish language translation of the complete English text **Ecology, Diversity, and Sustainability of the Middle Rio Grande Basin** Deborah M. Finch, 1995 This book synthesizes existing information on the ecology diversity human uses and research needs of the Middle Rio Grande Basin of New Mexico Divided into nine chapters the volume begins with reviews of the environmental history and human cultures in the Basin followed by an analysis of the influences and problems of climate and water Later chapters focus on ecological processes environmental changes management problems and current conditions in Basin ecosystems identified as being especially susceptible to damage pinyon juniper woodlands grasslands and shrublands and the riparian bosque of the Rio Grande Research needs associated with land management problems are identified for each of these ecosystem types Many interrelated factors identified here have contributed to deteriorating environmental conditions in the Basin Concluding chapters on the belowground ecology of specific Basin ecosystems and on declining populations of native fish species highlight topics in need of further attention Each chapter seeks to identify studies that can supply information to mitigate environmental problems rehabilitate ecosystems and sustain them in light of human values and needs **Ecology, Diversity, and Sustainability of the Middle Rio Grande Basin** Deborah M. Finch, 1995 Synthesizes existing information on the ecology diversity human uses research needs of the Middle Rio Grande Basin of New Mexico Begins with a review of the environmental history human cultures of the basin followed by an analysis of the influences problems of climate water Also focuses on ecological processes environmental changes management problems Each chapter identifies studies that can supply information to mitigate environmental problems rehabilitate ecosystems sustain them in light of human values needs **Advancing Sustainability of U.S.-Mexico Transboundary Drylands** Academia Mexicana de Ciencias, Academia de Ingeniería de México y Academia Nacional de Medicina de México, National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Water Science and Technology Board, Board on Atmospheric Sciences and Climate, Division of Behavioral and Social Sciences and Education, Board on Environmental Change and

Society,2019-01-27 The drylands region shared by the United States and Mexico currently faces multiple sustainability challenges at the intersection of the human and natural systems Warming and drying conditions threaten surface water and groundwater availability disrupt land and marine based livelihood systems and challenge the sustainability of human settlements These biophysical challenges are exacerbated by a highly mobile and dynamic population volatile economic and policy conditions increased exposure to extreme events and urbanization on marginal vulnerable lands The U S National Academies of Sciences Engineering and Medicine collaborated with the Mexican Academy of Sciences Academy of Engineering and the National Academy of Medicine to plan a 2 day binational workshop Advancing Sustainability of U S Mexico Transboundary Drylands The workshop goals were to highlight the challenges facing the region assess the scientific and technical capacity that each nation can bring to bear in addressing these challenges and identify new opportunities for binational research collaboration and coordinated management approaches in the advancement of sustainability science and development This publication summarizes the presentations and discussions from the workshop

**Mexican Americans and the Environment** Devon Gerardo Pe-a,2005 Mexican Americans have traditionally had a strong land ethic believing that humans must respect la tierra because it is the source of la vida As modern market forces exploit the earth communities struggle to control their own ecological futures and several studies have recorded that Mexican Americans are more impacted by environmental injustices than are other national origin groups In our countryside agricultural workers are poisoned by pesticides while farmers have lost ancestral lands to expropriation And in our polluted inner cities toxic wastes sicken children in their very playgrounds and homes This book addresses the struggle for environmental justice grassroots democracy and a sustainable society from a variety of Mexican American perspectives It draws on the ideas and experiences of people from all walks of life activists farmworkers union organizers land managers educators and many others who provide a clear overview of the most critical ecological issues facing Mexican origin people today The text is organized to first provide a general introduction to ecology from both scientific and political perspectives It then presents an environmental history for Mexican origin people on both sides of the border showing that the ecologically sustainable Norte o land use practices were eroded by the conquest of El Norte by the United States It finally offers a critique of the principal schools of American environmentalism and introduces the organizations and struggles of Mexican Americans in contemporary ecological politics Devon Pe a contrasts tenets of radical environmentalism with the ecological beliefs and grassroots struggles of Mexican origin people then shows how contemporary environmental justice struggles in Mexican American communities have challenged dominant concepts of environmentalism Mexican Americans and the Environment is a didactically sound text that introduces students to the conceptual vocabularies of ecology culture history and politics as it tells how competing ideas about nature have helped shape land use and environmental policies By demonstrating that any consideration of environmental ethics is incomplete without taking into account the experiences of Mexican Americans it

clearly shows students that ecology is more than nature study but embraces social issues of critical importance to their own lives

**Mexico City's Water Supply**, 1995

**Water Resources in Mexico** Úrsula Oswald Spring, 2011-08-26 Water resources in Mexico are threatened by scarcity pollution and climate change In two decades water consumption doubled producing water stress in dry seasons and semi arid and arid regions Water stress rises due to physical and economic stress In seven parts a multidisciplinary team analyzes hydrological processes in basins and their interaction with climate soil and biota Competing water use in agriculture industry and domestic needs require savings decontamination processes and desalination to satisfy the growing demand Water quality affects health and ecosystems This creates conflicts and cooperation that may be enhanced by public policy institution building and social organization

Water, Power and Citizenship José Esteban Castro, 2005-11-21 Water Power and Citizenship investigates the interrelationship between water politics and institutions and the development of citizenship rights from a historical sociological perspective The evolution of water's manifold social character and values as a source of power as a public good as a commodity or as a universal right is examined in the light of ever changing and mutually binding social and ecological processes The Basin of Mexico's rich water history becomes the vantage point to cast light on one of the most crucial challenges facing the international community that of eliminating water inequality and injustice

Water Policy in Mexico Hilda R. Guerrero García Rojas, 2018-05-23 Mexico is currently facing severe problems with water availability wastage and contamination The most contaminated and over exploited water resources are concentrated in the most populated areas of the country where water is scarcer and its quality makes it unsuitable for a variety of uses including human consumption At the same time it is indisputable that water quality is a determining factor in public health and ecosystems The significant growth in population and industry results in a high demand for water along with contaminating discharges few of which are treated and the impact upon the ecosystems is evident This book addresses all these topics in a single volume taking into account the challenges presented by the economic institutional and environmental considerations in Mexico's water policy framework

**Equity and Sustainable Development** Jane Clough-Riquelme, 2006 In light of the power strategies in play in the new geopolitics of economic and ecological globalization there is need for critical analysis of how the agenda of sustainable development is being conceived shaped and implemented This volume considers issues of equity and development in the US Mexico border region and highlights the fact that regions at the juncture of the industrial and developing worlds most clearly illustrate the problems inherent in current economic paradigms Jane Clough Riquelme is a regional planner with the San Diego Association of Governments SANDAG Her work focuses on borders planning including tribal liaison and binational and interregional planning with neighboring jurisdictions Nora L Bringas Rabago is research professor in the Department of Urban and Environmental Studies El Colegio de la Frontera Norte in Tijuana

**Water Availability and Management in Mexico** Elena María Otazo-Sánchez, Amado Enrique Navarro-Frómata, Vijay P. Singh, 2019-09-28 This book presents several complex case studies related to water management and planning in the context of pollution growing demands and global climate change in Mexico but which are also relevant for other countries in Latin America These concerns are of critical importance for policymakers who are coping with multiple conflicting interests Water availability in Mexico is polarized with abundant rainfall and large rivers in the south and desert like conditions in the north The central region which is the most industrialized is overpopulated Mexico City pours millions of cubic meters of blackwater into the northern valley daily and receives its clean water from the south To address these unsustainable conditions the world s 4th biggest water treatment plant went into operation in 2018 The water infrastructure and governance must satisfy the demands of all sectors including agricultural urban and economic activities At the same time water resources are affected by drought and climate change puts constraints on the supply As such regulation and monitoring are important when it comes to adherence to agreed plans and priorities The book is divided into four sections 1 Water Availability discusses quantitative aspects such as supply methods of calculation and fracking 2 Water Quality highlights pollution risks and diagnosis of water resources 3 Water Allocation examines the sectoral demands and vulnerability due to unsustainable irrigation 4 Water Governance and Management focuses on laws urban rules national parks planning and integrated water resources management among other topics The chapters include illustrative case studies in Mexico such as basins cities reservoirs and aquifers water supply demand assessment planning and management
