The Energy-Environment Connection Jack Hollander, 1992-08 While the enormous benefits of energy use have always been obvious only recently has it become apparent that its costs also are enormous The ever escalating scale of human activity has brought civilization to the point where energy and environment problems affect not only today's global ecosystem and its present inhabitants but also generations yet unborn Society faces critical and unprecedented decisions involving energy supply use and regulation decisions that are inextricably linked with issues of social equity economics and environmental ethics This book brings together leading scientists and policy analysts from around the world to provide the latest thinking on all aspects of the vital connection between energy and the environment The complex questions explored touch on nearly every issue relating to the environment and to human aspirations for improving our quality of life The book is organized around three themes the environmental impact of energy source supplies fossil fuels nuclear power biomass environmental and economic benefits of energy efficiency and policy and ethical issues including environmental ethics and Third World economic development Its goal is to help citizens and leaders find a way to balance the costs and benefits of energy within the context of global sustainability

Energy, Environment and Development José Goldemberg, Oswaldo Lucon, 2010 First Published in 2009 Routledge is an imprint of Taylor Francis an informa company

The Real Environmental Crisis Jack Hollander, 2003-04-02 Drawing a completely new road map toward a sustainable future Jack M Hollander contends that our most critical environmental problem is global poverty His balanced authoritative and lucid book challenges widely held beliefs that economic development and affluence pose a major threat to the world's environment and resources Pointing to the great strides that have been made toward improving and protecting the environment in the affluent democracies Hollander makes the case that the essential prerequisite for sustainability is a global transition from poverty to affluence coupled with a transition to freedom and democracy The Real Environmental Crisis takes a close look at the major environment and resource issues population growth climate change agriculture and food supply our fisheries forests and fossil fuels water and air quality and solar and nuclear power In each case Hollander finds compelling evidence that economic development and technological advances can relieve such problems as food shortages deforestation air pollution and land degradation and provide clean water adequate energy supplies and improved public health The book also tackles issues such as global warming genetically modified foods automobile and transportation technologies and the highly significant Endangered Species Act which Hollander asserts never would have been legislated in a poor country whose citizens struggle just to survive Hollander asks us to look beyond the media's doomsday rhetoric about the state of the environment for much of it is simply not true and to commit much more of our resources where they will do the most good to lifting the world's population out of poverty

Beyond Paradise Jack Clayton Swearingen, 2007-03-01 Technology is shaping our culture and controlling our lives for better or for worse Often technology's benefits far outweigh its negative impacts and technological advances can seem boundless But the scientific technological worldview tends to override other value systems Indeed this technological way of thinking has influenced many contemporary ideas beliefs values habits and ways of communicating Furthermore in addition to technology's well known environmental impacts social aesthetic and spiritual consequences are now emerging How can we balance positive physical effects of technology with other ambiguous or negative impacts Some of the decisions we face have no

precedent from which to draw wisdom For this reason the resources of Scripture and the Christian tradition must be brought to bear on technological questions How is technology used and abused today Does technological progress lead to human progress How can Scripture help us both individually and collectively to manage technology s impact in proactive ways Swearengen uncovers a comprehensive scriptural mandate for managing technology On his way to a theology of technology he evaluates which advances are moving society in directions consistent with God s purposes Beyond Paradise Technology and the Kingdom of God aims to provide practical means for assessing technology s influence and for steering technology and its effects toward biblical ends

Health and Energy Platform of Action report 2020-2022: building connections for better health World Health Organization, 2024-01-29 Energy is linked to many of the sustainable development priorities including public health gender equality food security clean water education economic growth youth and women s empowerment and climate action The absence of clean and sustainable energy has a significant adverse impact on the health and livelihoods of the poorest populations Around 2.3 billion people mostly in low and middle income countries LMICs still mainly rely on inefficient and polluting fuels and stoves for daily cooking exposing them to health damaging emissions that result in millions of premature deaths each year Health and livelihood risks are greatest for women and children as they are often tasked with cooking and gathering fuel The traditional use of biomass for cooking also puts the environment and climate at risk by contributing to deforestation and greenhouse gas emissions Around 1 billion people worldwide mostly in poor and rural communities are estimated to be served by health care facilities without any electricity or reliable power supply and only one in two hospitals in sub Saharan Africa has a reliable electricity supply Without adequate and reliable power essential medical devices cannot function basic amenities remain out

of reach and delivery of health care services is of substandard quality Unless rapid action is taken the world will not meet its targets under the 2030 Agenda for Sustainable Development and the Paris Agreement In November 2018 during the first World Health Organization WHO Global Conference on Air Pollution and Health Dr Tedros Adhanom Ghebreyesus Director General of WHO announced his vision to build a Health and Energy Platform of Action HEPA to enhance multisectoral collaboration between the health and energy sectors and mobilize the political and financial commitments needed to achieve Sustainable Development Goals SDGs 3 and 7 In response WHO the United Nations Department of Economic and Social Affairs UN DESA the United Nations Development Programme UNDP and the World Bank in cooperation with the International Renewable Energy Agency IRENA and other key stakeholders launched HEPA in May 2019 with an initial focus on improving health through promoting clean fuels and technologies for cooking and accelerating access to electricity for health care facilities Following this announcement in July 2020 HEPA members worked together to develop a strategic workplan with five overarching objectives to strengthen the cooperation between the health and energy sectors and elevate energy access as a key development priority area for public health gender equity climate and sustainable development more broadly see Box 1 HEPA has gained significant momentum since its establishment in 2019 By October 2022 the platform had over 20 member organizations All members are committed to working together and synergizing efforts on the ground to accelerate universal electrification of health care facilities and clean cooking This HEPA action report summarizes the key activities and results achieved and highlights activities under each of HEPA's five objectives

Critical Connections Lee Riedinger, Allen Ekkebus, William Bugg, D Ray

Smith,2024 This is a history of the long association of the University of Tennessee with Oak Ridge National Laboratory dating back to the Manhattan Project While large scale partnerships between scientific laboratories and academic institutions are now common in the aftermath of World War II it was not clear what role this huge research and development program would play in postwar America but pioneering professors and administrators were determined that one option dismantling the whole thing would not happen Thus began a now eight decade long association that has flowered into one of the world s largest collaborations between a federal agency and a research university *Agile Energy Systems* Woodrow W. Clark II,2017-07-22 *Agile Energy Systems* Global Distributed On Site and Central Grid Power Second Edition offers new solutions to the structure of electricity provision made possible by new energy technologies The book begins by showing how five precipitating forces led to the deregulation debacle in California including major technological changes and commercialization regulatory needs mismatched to societal adjustments inadequate and flawed economic models a lack of vision goals and planning that lead to energy failures and questionable finance and lack of economic development The second half of the book examines the civic market paradigm for new economic models and how to plan for complexity using California as an example of how the problem of centralized power systems can be seen in the worst drought that California has ever seen Offers new approaches to energy systems providing the tools and plans to achieve these objectives Presents specific and actionable public policy and program tools Illustrates how lessons learned from California can be used to create an agile energy system for any country
