Situated Cognition:

The Cambridge Handbook of Situated Cognition Philip Robbins, Murat Aydede, 2008-11-03 Since its inception some fifty years ago cognitive science has seen a number of sea changes Perhaps the best known is the development of connectionist models of cognition as an alternative to classical symbol based approaches A more recent and increasingly influential trend is that of dynamical systems based ecologically oriented models of the mind Researchers suggest that a full understanding of the mind will require systematic study of the dynamics of interaction between mind body and world Some argue that this new orientation calls for a revolutionary new metaphysics of mind according to which mental states and processes and even persons literally extend into the environment This book is a guide to this movement in cognitive science Each chapter tackles either a specific area of empirical research or specific sector of the conceptual foundation underlying this research

Situated Cognition David Kirshner, James A. Whitson, 2021-12-16 This book is a result of a symposium at a recent annual meeting of the American Educational Research Association that explored foundational issues relative to situated cognition theory Its chapters contribute to discourse about repositioning situated cognition theory within the broader supporting disciplines and to resolving the problematics addressed within the book There is a cumulative vision to the book its theme is that the notion of the individual in situated cognition theory needs to be fundamentally reformulated No theoretical reconfiguration of the social world or of social practices can overcome an individual cast in the dualist tradition This reformulation probes the physiological psychoanalytic and semiotic constitution of persons Chapters authors cover a wide range of topics including transfer of training arguing that traditional cognitive psychology has found precious little evidence of people's ability to apply knowledge gained in one context to the problems encountered in another ecosocial systems a new object of inquiry for situated cognition theory in which the primary units of analysis are not things or people but processes and practices how linkages between discursive practices are manifested as semiotic chaining of signifiers for individuals engaged in everyday activities at home or at school how the ability to function in ways that are consistent with logic emerges not through reflective abstraction on actions but through an enhanced sense of agency as more responsible roles are adopted in daily life practices the mutual constitution of social and individual knowledge familiar terms and concepts normally available through linguistic labels are cultural models to be distinguished from the variegated and hidden mid level meanings that reflect their situated uses in social activity the material neurological substrate through which cultural models and mid level meanings emerge and how learning environments can be structured to take advantage of the perceptual underpinnings of cognition

Beyond the Brain Benoit Hardy-Vallée, 2009-03-26 Cognitive science faces a major methodological and conceptual change since the 90 s Whereas the brain was traditionally conceived as being the only seat of intelligence many researches emphasize the entrenchment of the brain in body context and culture In 2006 a conference was held at the Universit du Qu bec Montr al UQAM and allowed researchers from various fields to interact and

discuss such issues Cognitio 2006 was an occasion for philosophers cognitive scientists and biologists to present the latest developments in their discipline and this book aims at providing a general overview of current research on embodied situated and distributed cognition

Discourse, Tools and Reasoning Lauren B. Resnick, 1997-11-20 To reason is to talk To think is to use tools To learn is to join a community of practice This book explores thought and reasoning as inherently social practices as actions situated in specific environments of demand opportunity and accountability Authors from diverse disciplines psychology sociology artificial intelligence linguistics anthropology examine how people think and learn in settings as diverse as a factory a classroom or an airplane cockpit The tools that people use in these varied settings are both physical technologies and cultural constructions concepts structures of reasoning and forms of discourse This volume in the NATO Special Programme on Advanced Educational Technology is based on an international conference on situated cognition and learning technologies

Situated Cognition William J. Clancey, 1997-08-28 This 1997 book examines recent changes in the design of intelligent machines which afford heightened interactivity with the environment

Instructional Development Paradigms Charles R. Dills, A. J. Romiszowski, 1997 An encyclopedic examination of competing paradigms in the areas of instructional design and development at all levels and in a variety of environments The 46 treatments feature the analysis of experienced scholars and sometimes the authors of the particular theories under discussion which include topics in instructional development in its philosophical mode constructivism postmodernism systems approach as a cultural vantage point and in theory and application reviewing the effects of technology on class design the influences of semiotics the strategic advantages of constructivist instruction versus linear designs and modeling for applying design strategies from constructivism and cognitive theory to individualizing instruction with adult learners Annotation copyrighted by Book News Inc Portland OR

Socio-Cognitive Dynamics in Strategic Processes Maren S. D. Breuer, 2010 Process related considerations in strategy research and approaches to managerial cognition constitute two highly valuable yet still only limitedly integrated fields of interest in strategic management To fill this void the work starts from a cognitive perspective

with the overall aim of examining the emergence of organisational strategies in strategic processes The central research object strategy is thereby conceptualized as shared strategic orientations among an organisation s key actors The existing gap between strategy process research and cognitive strategy research is closed on a conceptual level first by developing and specifying a socio cognitive perspective on strategic processes In recognition of the central importance of social interactions in this context the focus is then set on a specific core forum for strategic activities i e strategic decision making groups In this the nature and the role of social interactions for the developing strategy related knowledge structures is examined first conceptually leading to the development of a socio cognitive model on strategic decision making in groups followed by a qualitative empirical study in this kind of activity forum With its truly interdisciplinary nature the dissertation is of interest for strategy scholars as it enlarges the pool of knowledge in strategic management both content wise and also method olog ically with the innovative empirical research approach adopted For practitioners contributions are made by detailing the different dimensions of strategic processes and hence sensitizing to important factors for careful overall process designs At the micro level concrete suggestions are derived for composing and instructing strategy teams in such a way as to allow for efficient interchanges during the discussions themselves as well as to enable the effectiveness of these efforts beyond the specific group context and for the performance of the wider organisation

Social Enactivism Mark-Oliver Casper, 2018-11-19 Social enactivism is a philosophical theory which through the analysis of discursive practice aims at explaining how high level cognitive conditions and processes emerge The fundamental tenets of this theory are based on enactivist and neo pragmatist principles Therefore the emphasis is not on the purely linguistic understanding of discourse but on its structural interaction with technology that is created by man himself in the context of which the discursive performance takes place This perspective addresses not only a blind spot in the international debate about situated cognition but also a current problem in the philosophy of mind
