Federal regulations to limit exposures Eight substances have been added to this 12th ed of the report which now includes 240 listings The industrial chemical formaldehyde and a botanical known as aristolochic acids are listed as known human carcinogens Six other substances captafol cobalt tungsten carbide in powder or hard metal form certain inhalable glass wool fibers o nitrotoluene riddelliine and styrene are added as substances that are reasonably anticipated to be human carcinogens Figures This is a print on demand report *Annual Plan for Fiscal Year ...* National Toxicology Program (U.S.),1991

Carcinogens and Anticarcinogens in the Human Diet Committee on Comparative Toxicity of Naturally Occurring Carcinogens, Commission on Life Sciences, Division on Earth and Life Studies, National Research Council, 1996-02-26 Despite increasing knowledge of human nutrition the dietary contribution to cancer remains a troubling question Carcinogens and Anticarcinogens assembles the best available information on the magnitude of potential cancer risk and potential anticarcinogenic effect from naturally occurring chemicals compared with risk from synthetic chemical constituents The committee draws important conclusions about diet and cancer including the carcinogenic role of excess calories and fat the anticarcinogenic benefit of fiber and other substances and the impact of food additive regulation The book offers recommendations for epidemiological and diet research Carcinogens and Anticarcinogens provides a readable overview of issues and addresses critical questions Does diet contribute to an appreciable proportion of human cancer Are there significant interactions between carcinogens and anticarcinogens in the diet The volume discusses the mechanisms of carcinogenic and anticarcinogenic properties and considers whether techniques used to evaluate the carcinogenic potential of synthetics can be used with naturally occurring chemicals The committee provides criteria for prioritizing the vast number of substances that need to be tested Carcinogens and Anticarcinogens clarifies the issues and sets the direction for further investigations into diet and cancer This volume will be of interest to anyone involved in food and health issues policymakers regulators researchers nutrition professionals and health advocates
