skyscrapers from around the world both recently built and under construction that explains the structural principles behind their creation *High-rise Manual* Johann Eisele, Ellen Kloft, 2003 What constitutes a high rise building A high rise is in fact any building with more than 9 storeys and not just those striking skyscrapers which shape modern city skylines In the past architects who designed such structures used to be the exception but in the last 10 years more and more architectural offices have begun to focus on this type of building However the sheer complexity of designing and planning the construction of a high rise as opposed to other building types requires a wealth of specialized experience and expertise The High Rise Manual is the first comprehensive reference work on this subject All relevant aspects of such an undertaking are examined in detail by some 24 specialist authors Each step is extensively documented including the initial project planning the building organisation the laying of the foundations the supporting structure the building technology the office design and the Facility Management Theoretical contributions present the basic principles of select **Designing Tall Buildings** Mark

Sarkisian, 2012-03-22 The first of its kind Designing Tall Buildings is an accessible reference that guides you through the fundamental principles of designing high rises Each chapter focuses on one theme central to tall building design giving you a comprehensive overview of the related architecture and structural engineering concepts Mark P Sarkisian provides clear definitions of technical terms and introduces important equations to help you gradually develop your knowledge Later chapters allow you to explore more complex applications such as biomimicry Projects drawn from Skidmore Owings and Merrill's vast catalog of built high rises many of which Sarkisian designed demonstrate these concepts This book advises you

to consider the influence of a particular site's geology, wind conditions and seismicity. Using this contextual knowledge and analysis, you can determine what types of structural solutions are best suited for a tower on that site. You can then conceptualize and devise efficient structural systems that are not only safe but also constructible and economical. Sarkisian also addresses the influence of nature in design, urging you to integrate structure and architecture for buildings of superior performance, sustainability and aesthetic excellence.

Second Century of the Skyscraper Lynn S. Beedle, 1988 tenant is looming in importance The owner is having more influence on the building As Gerald D Hines has said there are indications that the desire for more discretionary time will lead to more residential high rises dose to or in the midst of downtown office buildings Downtown living could become the desired alternative Tall

buildings will be approached increasingly from the standpoint of an urban ecology that what happens to a part can influence the whole. Providing for public as well as private needs in a tall building project is just one example. Facilities for schools, shops, religious and other needs. More attention will be paid to maintaining streets as lively and interesting places. Will a new world's tallest be built? Will we go a mile high? The answer is probably yes to the first, no to the second. With the recent spate of super tall buildings on the drawing boards going to greater heights was in the back of many people's minds at the Chicago conference. But in the United States at least buildings of 70 to 80 stories would appear to provide needed space consistent with economy. The future then is described in depth by papers that go into specific areas.
