Austin,P. Brimblecombe,W.T. Sturges,2002-10-31 Acid rain photochemistry long range transport of pollutants greenhouse gas emissions and aerosols have dominated tropospheric air pollution for the last 30 years of the 20th century At the start of the 21st century acid rain is subject to planned improvement in Europe and North America but is still a growing problem in Asia Tropospheric ozone is understood much better but the problem is still with us and desirable levels are difficult to achieve over continental Europe The heterogeneous chemistry that is responsible for ozone depletion in the stratosphere is now reasonably clear but there is on going interest in the sources and sinks of CFC chlorofluorocarbon replacements in the troposphere There is also increasing interest in indoor air quality and the origin and health implications of atmospheric particles Perhaps most important on a global perspective intensive research has not yet determined the relationship between greenhouse gases aerosols and surface temperature The climactic

implications of these are now more urgent than ever This book the first in the Developments in Environmental Science series consists of a collection of authoritative reviews and essays on the science and application of air pollution research at the start of this new century     Enforcing Pollution Control Laws Clifford S. Russell,Winston Harrington,William J.

Vaughn,2013-10-18 Economic models are used to show the extent of the difficulties involved in monitoring and enforcing pollution control laws on a continual basis The authors make several recommendations for policy change They also show that high rates of compliance can be achieved within tight budget constraints Originally published in 1986     **Introduction to**

**An Introduction to the Green Economy** Adrian C. Newton, Elena Cantarello, 2014-08-13

The green economy is widely seen as a potential solution to current global economic and environmental crises and a potential mechanism by which sustainable development might be achieved in practice Considerable investments are now being made into the development of green technology renewable energy biodiversity conservation resource efficiency recycling of materials and green infrastructure This textbook provides a comprehensive introduction to the green economy using a strongly interdisciplinary approach based on environmental science rather than treating it as a sub set of economics The scientific principles of sustainability are presented which provide the foundations of the green economy with a particular focus on systems based approaches Examples of real world case studies are used to illustrate how the green economy can be achieved in practice In this way the authors provide a thorough overview of both the principles and practice of the green economy drawing from a wide range of disciplines including ecology geography social science psychology sustainability science environmental science law and economics The emphasis is on presenting results of the latest research derived from leading scientific journals Rather than focusing on a single definition of what constitutes a green economy the book introduces readers to the diversity of opinion that exists and engages them in what is an active on going debate This reflects the fact that many aspects of the green economy and sustainable development more generally are currently contested In particular the book will help readers to strengthen their ability to critically evaluate the evidence for and against the views presented and to actively contribute to the future development of the green economy
