Economy and Ocean Sustainable Development in a Globalised World: Social, Political, Economic and

Environmental Issues Ibukun J. Adewumi, Andrei Polejack, Joanna Vince, Maree E. Fudge, 2023-12-05 In the last decade the concept of a Blue Economy has ignited a deep theoretical debate Ranging from the integration of the triple bottom line of sustainability to the optimization of profit from ocean exploitation the meaning of the term blue economy differs considerably between epistemic communities and even more so among national and regional policies There is a general sense of the opportunity to realise enhanced social and economic benefits from the sustainable utilisation of their ocean and coastal

resources under the umbrella framework of blue economy Blue economy is gaining traction already as a significant component of national policies even in spite of a clear conceptualization of the term Many countries are now preparing national policies towards realising their blue economy ambitions utilizing the concept as they see fit Likewise multilateral and regional organisations are developing guidelines and providing investment in new research technologies and financing tools that promote blue economy Critical challenges abound in particular in less privileged countries These include the gap in research capabilities governments prioritizing social wellbeing and economic profit in contrast to environmental protection the identification of new and emerging areas of ocean economic activity that are both socially and ecologically sustainable and holds viable business models that can attract private investment

Artificial Intelligence and Edge Computing for Sustainable Ocean Health Debashis De, Diganta Sengupta, Tien Anh Tran, 2024-09-11 Artificial Intelligence and Edge Computing for

Sustainable Ocean Health explores the transformative role of AI and edge computing in preserving and enhancing ocean health. The growing influence of Artificial Intelligence (AI) along with the Internet of Things (IoT) in generating wide coverage of sensor networks and Edge Computing (EC) has paved the way for investigation of underwater as well as massive marine data, thereby generating huge potential for credible research opportunities for these domains. This book's journey begins with a broad overview of Artificial Intelligence for Sustainable Ocean Health, setting the foundation for understanding AI's potential in marine conservation. The subsequent chapter, Role of Artificial Intelligence and Technologies in Improving Ocean Health in Promoting Tourism, illustrates the synergy between technological advancements and sustainable tourism practices, demonstrating how AI can enhance the attractiveness and preservation of marine destinations. The identification, restoration, and monitoring of marine resources along with the utilization of technology continues in Utilization of Underwater Wireless Sensor Network through Supervising a Random Network Environment in the Ocean Environment, which has been extensively dealt with. The technical challenges of underwater imaging essential for accurate data collection and analysis have been discussed. The importance of Explainable AI is discussed in chapters like Sustainable Development Goal 14 Explainable AI (XAI) for Ocean Health, Explainable AI (XAI) for Ocean Health, Exploring the Role of Explainable AI in Enhancing Ocean Health, and A Comprehensive Study of AI (XAI) for Ocean Health Monitoring, which emphasize transparency and trust in AI systems. Further, Revolutionizing Internet of Underwater Things with Federated Learning, Underwater Drone, Underwater Imagery with AI, ML, and IoT in ROV Technology, and Ocean Cleanup have been demonstrated using innovative approaches to addressing underwater challenges. The book also includes a Review on the Optics and Photonics in Environmental Sustainability, focusing on the role of optics in marine conservation. Security issues are tackled in Intelligent Hash Function Based Key Exchange Scheme for Ocean Underwater Data Transmission, and the overarching potential of AI in marine resource management is discussed in Artificial Intelligence as Key enabler for Safeguarding the Marine Resources.

[Ocean Sustainability in the 21st Century](#) Salvatore Aricò, 2015-04-02. Describing the emerging and unresolved issues related to the oceans and the marine environment, this book presents the developments made in marine science and policy since the implementation of the United Nations Convention on the Law of the Sea (UNCLOS) and implications for the sustainable management of ocean areas and resources. This comprehensive volume also provides a number of scientific, policy, and legal tools to address such issues and to ensure better science-based management of the oceans. Topics covered include the impacts of human-induced climate change on the oceans, the marine genetic resources debate, the current legal framework for the oceans, and a comparative study of the legal issues associated with outer space. Including practical examples and worldwide case studies, this book is a valuable resource for policy makers, students, and academics in marine science and policy, ocean affairs, and the law of the sea.

Sustainability in the Maritime Domain Angela Carpenter, Tafsir M. Johansson, Jon A. Skinner, 2021-05-29. This volume explores options for a sustainable maritime domain, including maritime transportation such as Maritime Spatial Planning.

MSP maritime education and training maritime traffic and advisory systems maritime security Other activities in the maritime domain covered in the book include small scale fisheries and sustainable fisheries and greening the blue economy The book aims to provide the building blocks needed for a framework for good ocean governance a framework that will serve through the next decade and hopefully well beyond the 2030 milestone of the UN Agenda for Sustainable Development In short this book brings together the problems of the current world and sustainable solutions that are in the development process and will eventually materialize in the not so distant future Additionally the book presents a trans disciplinary analysis of integral sustainable maritime transportation solutions and crucial issues relevant to good ocean governance that have recently been discussed at different national regional and international fora highlighting ongoing work to develop and support governance systems that facilitate industry requirements and meet the needs of coastal states and indigenous peoples of researchers of spatial planners and of other sectors dependent on the oceans The book will be of interest to researchers across many disciplines especially those that are engaged in cross sectoral research and developments in the maritime transport sector and across the wider maritime domain To this end the book covers areas including natural and social sciences geographical studies spatial planning maritime security and gender studies as they relate to transport and the wider maritime sector In addition the book explores frameworks for sustainable ocean governance being developed under the UN s Agenda for Sustainable Development to 2030 It will also look beyond the 2030 milestone under that Agenda and will be of use to national and international policymakers and practitioners government actors at the EU and other regional and national levels and to researchers of ocean governance sustainability and management and maritime transport
