micrognathia, and clubfoot), which is similar to the 30% risk suggested previously.¹ Vaginal bleeding was significantly more common than in mothers with a normal uterus (54.1% versus 14.1%), and vaginal bleeding has previously been associated with limb reduction defects.^{13,14,16} In a study of 322 women with abnormal uterine bleeding, hysteroscopy detected asymptomatic Müllerian anomalies in 10% of these women. The women with Müllerian anomalies had a significantly higher incidence of spontaneous abortion and lower cumulative live birth rates,^{13,17} which suggests that some fetuses with severe defects might have been lost earlier in gestation in this case-control study of liveborn and stillborn infants.¹⁸

MANAGEMENT, PROGNOSIS, AND COUNSEL

Surgical improvement of the uterine size, if indicated and possible, may improve the chances of rearing a normal fetus to a term birth.¹¹ Large uterine fibroids may also merit consideration of surgical intervention. Among 174 patients with appropriate imaging, reproductive performance depended on the type of uterine malformation and urinary

tract anomalies. The lowest percentage of women who had only live births occurred in women with bicornuate unicornis uterus (28%). Among women with uterine anomalies and unilateral renal agenesis, perinatal outcomes were much better (72% had only living children) than those with no renal agenesis (40%). The 355 pregnancies in patients with associated unilateral renal agenesis were associated with term deliveries and living children, while pregnancies in women with uterine malformation and no renal agenesis had more fetal loss, premature birth, and breech presentations. Thus if the Müllerian anomaly was the consequence of abnormal mesonephric or Wolffian morphogenesis, reproductive performance was much improved over women with an isolated Müllerian defect.¹⁹ Among 21 women with uterine malformations and a surgically treated obstructed hemivagina and associated ipsilateral renal agenesis (12 didelphic, 6 separate, and 3 bicornuate uterus), all had surgical excision of the longitudinal vaginal septum causing the obstructed hemivagina during adolescence. Conception was attempted at a median of 13 years later in 13 of these women, who produced 22 pregnancies, with 77% of pregnancies occurring contralateral to the treated obstructed hemivagina and unilateral renal agenesis, and 91% of these pregnancies ended in

Hennekam M.D., Ph.D., 2001-09-27 This classic text, one of the true anchors of our clinical genetics publishing program, covers over 700 different genetic syndromes involving the head and neck and it has established itself as the definitive comprehensive work on the subject. The discussion covers the phenotype spectrum, epidemiology, mode of inheritance, pathogenesis, and clinical profile of each condition, all of which is accompanied by a wealth of illustrations. The authors are recognized leaders in the field, and their vast knowledge and strong clinical judgment will help readers make sense of this complex and burgeoning field. Dr. Gorlin retires as editor in this edition, and co-editor Raoul Hennekam takes over. Dr. Hennekam is regarded as one of the top dysmorphologists and indeed one of the top clinical geneticists in the world. Judith Allanson is new to the book but is a veteran OUP author and a widely respected geneticist, and Ian Krantz at Penn is a rising star in the field. Dr. Gorlin's name has always been closely associated with the book, and it has now become part of the title. As in all fields of genetics, there has been an explosion in the genetics of dysmorphology syndromes, and the author has undertaken a complete updating of all chapters in light of the discoveries of the Human Genome Project and other ongoing advances, with some chapters requiring complete rewriting. Additional material has been added both in terms of new syndromes and in updating information on existing syndromes. The book will appeal to clinical geneticists, pediatricians, neurologists, head and neck surgeons, otolaryngologists, and dentists. The 4th edition, which was published in 2001, has sold 2,600 copies **Human Malformations and Related Anomalies** Roger E.
