Sound Knowledge J. Q. Davies, Ellen Lockhart, 2017-01-30 What does it mean to hear scientifically What does it mean to see musically This volume uncovers a new side to the long nineteenth century in London a hidden history in which virtuosic musical entertainment and scientific discovery intersected in remarkable ways Sound Knowledge examines how scientific truth was accrued by means of visual and aural experience and in turn how musical knowledge was located in relation to empirical scientific practice James Q Davies and Ellen Lockhart gather work by leading scholars to explore a crucial sixty year period beginning with Charles Burney's ambitious General History of Music a four volume study of music around the globe and extending to the Great Exhibition of 1851 where musical instruments were assembled alongside the technologies of science and industry in the immense glass encased collections of the Crystal Palace Importantly as the contributions show both the power of science and the power of music relied on performance spectacle and experiment Ultimately this volume sets the stage for a new picture of modern disciplinarity shining light on an era before the division of aural and visual knowledge **Light List**, 1941 **Textbook of Psychology (Psychology Revivals)** D.O. Hebb, D.C. Donderi, 2013-12-19

Donald Hebb was one of the most influential psychologists of the 20th century and the first version of this textbook was written in 1958 This 4th edition co authored with Donderi was originally published in 1987 and the object of the book was to introduce the student to the scientific study of the human mind and behaviour The authors concern was with scientific psychology and fundamental principles They felt this understanding was the best preparation to following future developments in psychological knowledge and to understand the changes in how that knowledge was applied Although psychology has developed in many directions since its publication much of the information in this book is still relevant today

Music and the Making of Modern Science Peter Pesic, 2014-07-03 A wide ranging exploration of how music has influenced science through the ages from fifteenth century cosmology to twentieth century string theory In the natural science of ancient Greece music formed the meeting place between numbers and perception for the next two millennia Pesic tells us in *Music and the Making of Modern Science* liberal education connected music with arithmetic geometry and astronomy within a fourfold study the quadrivium Peter Pesic argues provocatively that music has had a formative effect on the development of modern science that music has been not just a charming accompaniment to thought but a conceptual force in its own right Pesic explores a series of episodes in which music influenced science moments in which prior

developments in music arguably affected subsequent aspects of natural science He describes encounters between harmony and fifteenth century cosmological controversies between musical initiatives and irrational numbers between vibrating bodies and the emergent electromagnetism He offers lively accounts of how Newton applied the musical scale to define the colors in the spectrum how Euler and others applied musical ideas to develop the wave theory of light and how a harmonium prepared Max Planck to find a quantum theory that reengaged the mathematics of vibration Taken together these cases document the peculiar power of music its autonomous force as a stream of experience capable of stimulating insights different from those mediated by the verbal and the visual An innovative e book edition available for iOS devices will allow sound examples to be played by a touch and shows the score in a moving line *NASA Technical Translation* ,1959

Instruments and the Imagination Thomas L. Hankins,Robert J. Silverman,2014-07-14 Thomas Hankins and Robert Silverman investigate an array of instruments from the seventeenth through the nineteenth century that seem at first to be marginal to science magnetic clocks that were said to operate by the movements of sunflower seeds magic lanterns ocular harpsichords machines that played different colored lights in harmonious mixtures Aeolian harps a form of wind chime and other instruments of natural magic designed to produce wondrous effects By looking at these and the first recording instruments the stereoscope and speaking machines the authors show that scientific instruments first made their appearance as devices used to evoke wonder in the beholder as in works of magic and the theater The authors also demonstrate that these instruments even though they were often tricks were seen by their inventors as more than trickery In the view of Athanasius Kircher for instance the sunflower clock was not merely a hoax but an effort to demonstrate however fraudulently his truly held belief that the ability of a flower to follow the sun was due to the same cosmic magnetic influence as that which moved the planets and caused the rotation of the earth The marvels revealed in this work raise and answer questions about the connections between natural science and natural magic the meaning of demonstration the role of language and the senses in science and the connections among art music literature and natural science Originally published in 1995 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 **Journal of Experimental Psychology** ,1921 Annual Report of the Light-House Board of the United States to the Secretary of the Treasury for the Fiscal Year Ended ...
