Loring Brace, 2000 Brace has reworked ten of the many articles he has published on human evolution over the past 40 years and assembled them into a statement on evolutionary anthropology He begins by investigating which anthropological data can benefit from an evolutionary perspective and which cannot Then he explores such topics as Darwinism race cladistics phylogeny Neanderthals dentition and cultural ecology Annotation copyrighted by Book News Inc Portland OR Developing a Universal Religion David Hockey, 2003 **Tools, Language and Cognition in Human Evolution** Kathleen Rita Gibson, Tim Ingold, 1993 Looks at how humans have evolved complex behaviours such as language and culture Evolution of Consciousness Vincent Frank Bedogne, 2008-07-20 From the alpha to the omega Pierre Teilhard de Chardin offers an evolution of consciousness paradigm of the universe and a triumphant vision of humankind and its future Guided by a creative process that motivated Teilhard Vincent Frank Bedogne aims to unite matter with consciousness science with spirituality He looks beyond Darwin and the big bang beyond traditional ideas of God religion and the human role in existence As he does we realize that the universe is crossing the most profound threshold in its evolution since the dawn of reflective thought a thousand lifetimes ago and like the threshold to reflection this blossom of transcendence is unfolding within us The book philosopher Pierre Teilhard de Chardin would have written had he lived another fifty years **Action in Uncertainty** Jean-Charles Pomerol, 2023-08-29 Despite uncertainty people are born to act Faced with environmental aggression and upheaval inaction is more stressful than action What choices strategies or methods need to be implemented so that action is as effective as possible in terms of the objectives to be achieved We should not delude ourselves about the term good decision which does not have much meaning when we act in an uncertain environment and when we know the weakness of forecasts However we must know how to act and be capable of taking the most appropriate action Action in Uncertainty is a real guide to taking effective action when nothing is certain According to the different types of uncertainty what are the respective good uses of expertise and intuition How do we motivate teams and avoid cognitive bias and manipulation These themes are dealt with in clear and accessible terms to help decision makers make the right choices in a world that is more uncertain than ever *The Quest for the Inner Human* Steven H. Propp, 2013-12-03 Psychology means the study of the soul it is the social science concerned with investigating who we are why we have certain feelings and why we do the things we do Are we no more than a vast assembly of nerve cells and their

associated molecules Is biology our genetic inheritance destiny or does social upbringing play a crucial role What are the roles played by Nature and by Nurture Are we purely physical beings or is there an aspect that can be called spiritual This thought provoking novel takes you on a journey of intellectual and emotional exploration considering along the way questions that we've all asked ourselves such as Is it true that we only use 10% of our brains Does playing classical music for infants increase their intelligence Do crime rates go up during a full moon Can hypnosis or post hypnotic suggestions make us do something we wouldn't normally do Does subliminal advertising influence us to buy products Are our memories stored indelibly almost like a tape recorder What causes memory lapses as we age Can repressed traumatic memories be recovered through hypnosis Do some people have multiple personalities How can I tell if someone has a neurosis or a psychosis Do men have an inner feminine side and women an inner masculine Are there innate psychological differences between males and females The four main characters in this book will guide you through a diverse and sometimes bewildering world of differing approaches to answering such questions such as Freudian Jungian and Adlerian Humanistic Existential and Transpersonal as well as Cognitive Emotive and Behaviorist Along the way you will learn about the developmental stages proposed by psychologists such as Erikson Kohlberg Piaget and Fowler and even explore some of the questions currently being asked by both neuroscientists and philosophers of the mind Start reading to begin your study of our innermost selves *German English Words* Robbin D. earliest known glaciation nearly three billion years ago to the present Following the development of scientific ideas about these dramatic events Macdougall traces the lives of many of the brilliant and intriguing characters who have contributed to the evolving understanding of how ice ages come about As it explains how the great Pleistocene Ice Age has shaped the earth's landscape and influenced the course of human evolution Frozen Earth also provides a fascinating look at how science is done how the excitement of discovery drives scientists to explore and investigate and how timing and chance play a part in the acceptance of new scientific ideas Macdougall describes the awesome power of cataclysmic floods that marked the melting of the glaciers of the Pleistocene Ice Age He probes the chilling evidence for Snowball Earth an episode far back in the earth's past that may have seen our planet encased in ice from pole to pole He discusses the accumulating evidence from deep sea sediment cores as well as ice cores from Greenland and the Antarctic that suggests fast changing ice age climates may have directly impacted the evolution of our species and the course of human migration and civilization Frozen Earth also chronicles how the concept of the ice age has gripped the imagination of scientists for almost two centuries It offers an absorbing consideration of how current studies of Pleistocene climate may help us understand earth's future climate changes including the question of when the next glacial interval will occur

**The Ascent of Mind** William H. Calvin, 1991 A critically acclaimed science writer and neurobiologist author of *The Cerebral Symphony* explores one of the greatest mysteries of human origins what caused the huge and sudden changes that made an ape brain evolve into the human brain Line drawings throughout

**The Empire of Climate** David N. Livingstone, 2024-04-16 As the looming consequences of climate change increasingly dominate our visions of the future media coverage and public discourse often focus on how an altered climate will inevitably and unevenly reshape human life across the globe Amid predictions of mass displacement food shortages conflict over resources and widespread health problems many people are newly reckoning with a very old idea that the conditions of our climate will inexorably determine our future This book examines the intellectual architecture of the once widely trafficked belief that climate exerts an ineluctable power over the human species shaping everything from the wealth of nations to human health from the outbreak of hostilities to the evolution of the brain and mental wellbeing The book is organized around four themes health wealth war and mind Each section opens with contemporary anxieties about the influence of an altered climate before tracing the history of these fixations back to much earlier pronouncements on climate's influence Livingstone illustrates how the specter of climatic influence has been used variously to explain interpret and redraw the world and how it played a significant role in the development and justification of some of history's most destructive worldviews He cites examples where climate has been critically implicated in the politics of imperial control labor power and race relations to explain industrial development economic breakdown and market performance as a marker for national character and cultural collapse as an explanation for past warfare and civil conflict today and as a critical factor in psychological disorders patterns of suicide and the prevalence of acute psychosis The book overall traces a powerful set of

ideas that has spanned human history and that continue to shape the modern world in various forms to this day

**Evolution, Information, and Personality** Robert DePaolo, 2007-08 If writing a multidisciplinary treatise is difficult and this endeavor wasn't exactly a walk in the park then I had to imagine how difficult it might be for the reader to assimilate the cross references to evolution information dynamics and clinical psychology that characterize this book Moreover I had to consider that reading a book written in language derived from quantum physics psychology and anthropology might prove to be a bit dreary even for seasoned clinicians So to preclude possible confusion this book was written with Information Theory in mind That's why for the sake of clarity certain themes are repeated in successive chapters to serve as an anchor point for the diverse ideas that revolve around them As to the book itself it is offered as an integrative theory For those who favor linear determinism and the narrow treatment of variables one at a time this might seem speculative Others with an interest not just in understanding who we are but how we fit into a vast cosmos might find it intriguing My only hope is that it fosters debate Praise for Evolution Information Personality Not since Julian Jaynes *The Origin of Consciousness in the Breakdown of the Bicameral Mind* has there been such a thought provoking account of human personality Robert DePaolo's description how the mind evolved and its implications for psychiatry are ahead of our time a must read for any student or professional in the fields of philosophy and psychology David Kamen PhD Clinical Psychologist Nashua Counseling Center A revolutionary treatise that includes an invigorating and thought provoking new therapeutic approach Deborah Whitaker Duncklee Transpersonal Therapist Author of *Looking Glass Sky The Widow's Walk* and Screenplays Coconut Grove and *We are Stardust* Beyond AI J. Storrs Hall, 2009-09-25 With a 30 year career in artificial intelligence AI and computer science Hall reviews the history of AI predicting the probable achievements in the near future and provides an intriguing glimpse into the astonishing possibilities and dilemmas on the horizon Bioastronomy Jean Heidmann, Michael J. Klein, 2005-08-11 This book collects together a selection of the best papers presented at the Third International Bioastronomy Symposium held in 1990 The subject is bioastronomy the search for life in the universe and the book is divided according to the five main stages of life as recognized by this new branch of science cosmic organic prebiotic primitive biological and advanced Thereader will find here the most recent results obtained by top specialists from all over the world on hot topics such as the formation and discovery of planets organic chemistry in meteorites and comets prebiotic chemistry in the atmosphere of Titan the search for primitive life in the permafrost of Mars and SETI itself the search for extraterrestrial intelligence Complemented by live discussions each presentation forms a review of the state of the art treatment of a particular area and also looks toward those developments in bioastronomy which will surely be realized in the next few years Maps of Time David Christian, 2011-09 Introducing a novel perspective on the study of history David Christian views the interaction of the natural world with the more recent arrivals in flora fauna including human beings *Unbound* Richard L Currier, 2017-08-08 Like *Guns Germs and Steel* a work of breathtaking sweep and originality that reinterprets the human story Although we usually

think of technology as something unique to modern times our ancestors began to create the first technologies millions of years ago in the form of prehistoric tools and weapons Over time eight key technologies gradually freed us from the limitations of our animal origins The fabrication of weapons the mastery of fire and the technologies of clothing and shelter radically restructured the human body enabling us to walk upright shed our body hair and migrate out of tropical Africa Symbolic communication transformed human evolution from a slow biological process into a fast cultural process The invention of agriculture revolutionized the relationship between humanity and the environment and the technologies of interaction led to the birth of civilization Precision machinery spawned the industrial revolution and the rise of nation states and in the next metamorphosis digital technologies may well unite all of humanity for the benefit of future generations Synthesizing the findings of primatology paleontology archeology history and anthropology Richard Currier reinterprets and retells the modern narrative of human evolution that began with the discovery of Lucy and other Australopithecus fossils But the same forces that allowed us to integrate technology into every aspect of our daily lives have also brought us to the brink of planetary catastrophe Unbound explains both how we got here and how human society must be transformed again to achieve a sustainable future Technology The deliberate modification of any natural object or substance with forethought to achieve a specific end or to serve a specific purpose      **Number Synchronicity** Skot Jonz,2004-09-27 Number Synchronicity A Beacon of Light for the Souls Journey stands as a definitive exploration of a phenomenon affecting millions of people around the world In exploring the inexplicable it becomes necessary to go beyond the amusement of numerology books that show how to gain insight from numbers in a name or birth date Plenty of good books for that already exist Bridging the gap between scientific objectivity and outrageous speculation Number Synchronicity maintains the middle path In pursuit of the truth seemingly separate threads weave the fabric of a new understanding Abundant facts and convincing evidence equate number synchronicity to a beacon of light in a storm providing guidance and comfort during times of chaos transition and uncertainty
