**The Automated Battlefield** Frank Barnaby, 1986-06-01 A fascinating glimpse of future war fought without human confrontation Argues that advances in surveillance and target acquisition systems the development of increasingly intelligent missiles and highly destructive conventional warheads and the automation of command control and communications operations foreshadow the advent of war fought entirely by machines Reveals an new perspectives on the modern battleground where advancing forces are not men but mechanized drones monitored on video screens by commanders who base their strategies on unmanned aircraft reconnaissance from satellites and underground sensors Arms and Artificial Intelligence Stockholm International Peace Research Institute, 1987 The impact of information technology in the field of military decision making is superficially less visible than that of a number of other weapon developments though its importance has grown steadily since the beginning of the 1980s Owing to its potential role in modern weapon systems and the prospect of its inclusion as an essential ingredient in many military projects such as the Strategic Defence Initiative it has become the focus of special interest and efforts This book is the first attempt to present a broad overview of the prospects for information technology in general and machine intelligence in particular in the context of international security The dangers and promises of weapon and arms control applications of computers and artificial intelligence to decision making processes are analysed in a technical strategic and political perspective by experts from six different countries In an introductory chapter Allan Din presents a generic overview of artificial intelligence and its prospects Thirteen contributors then discuss the conceptual and technical framework of artificial intelligence analyse implications for weapon systems and strategy and discuss possible applications to arms control verification and modelling **Arms Uncontrolled** Frank Barnaby, Ronald Huisken, Stockholm International Peace Research Institute, 1975 The arms race has become a global phenomenon Each year the world spends a staggering sum on armaments total military expenditure is almost equal to the entire national income of the poorer half of mankind aid given underdeveloped countries is a mere 5 percent of money spent for military purposes resources devoted to medical research are less than a quarter of those devoted to military research and development

**Parameters** , 1982 **The Scientific Way of Warfare** Antoine J. Bousquet, 2022-06-15 Bousquet s landmark book examines the impact of key technologies and scientific ideas on the theory and practice of warfare and the handling of the perennial tension between order and chaos on the battlefield Spanning the entire modern era from the Scientific Revolution to the present it offers a systematic account of modern warfare as the constitution of increasingly complex assemblages of bodies and machines whose integration rests upon a military assimilation of scientific thought Reflecting the pervasive influence of scientific conceptual frameworks upon warfare modern armies have been successively organised by reference to the paradigmatic technologies of the clock engine computer and network Conversely major scientific developments and technological breakthroughs have become intertwined with the experience of war especially since the Second World War s

unprecedented mobilisation of scientific rationality and technical expertise This increasingly tight symbiosis between science technology and war is at the heart of both the tremendous powers and enduring pathologies displayed by the contemporary military machine In this new and revised edition Bousquet extends the analysis to encompass the latest developments in the scientific way of warfare in the midst of renewed great power competition and a wave of technological innovation in artificial intelligence and robotics

**White Heat** Carroll W. Pursell, 1994

Technology has been called the art of the twentieth century It is the expression of everything that makes us human Our myths and rituals our fantasies and creativity all find expression in our technology The ability to forge tools by the fashioning of metal in its white heat state was preceded by the creation of tools in stone This was the first indication of humanity's capacity to shape and use the raw materials available to it It reached its peak in the industrial revolution of the nineteenth century and today its momentum can be seen in every part of our lives It is this combination of technological creativity and human passion which Carroll Pursell pursues in *White Heat* Professor Pursell explores technology not as a succession of gadgets and gizmos but as a study of how society's values are embedded in them Written to accompany a major television series and illustrated with some surprising and fascinating photographs his book reveals a new layer of meaning to the devices tools and machines which have been developed throughout human history
