Energy Research and Development Administration,1976 **Economic Analysis of Environmental Policies** Donald N. Dewees, C.K. Everson, William A. Sims, 1975-12-15 A framework is concisely presented for the economic analysis of pollution problems and for evaluating proposed solutions The substantial recent literature on environmental economics is reviewed and related to Ontario environmental policy Topics include the theory of externalities as an explanation of environmental problems policy objectives costs of information and monitoring and the impact of these costs on control policy selection Three case studies of specific pollution problems sulphur dioxide from a smelter lead from downtown factories and urban automobile emissions are given and possible solutions explored The authors methodology is applicable not only to air and water pollution but also to noise aesthetic degradation and solid waste This study will be welcomed by specialists civil servants and students trying to understand the economic aspects of environmental maintenance

*Trade and the Environment* Damien Geradin, 1997-11-28 A penetrating analysis of the relation between trade and environmental protection policies in the EC and the US Automobile Emission Control, the Technical Status and Outlook as of December 1974 United States. Environmental Protection Agency. Office of Mobile Source Air Pollution Control. Emission Control Technology Division, 1975 *Time Strategies, Innovation, and Environmental Policy* Christian Sartorius, Stefan Zundel, 2005-01-01 Timeliness is a particularly relevant issue in the field of innovation and diffusion research This book originates from the observation that innovations are time critical and asks the question when and how do windows of opportunity for new environmental technologies emerge and why do they disappear again By analysing these windows of opportunity and possible time strategies for innovation policies this book represents a highly topical contribution to a front line issue in environmental and innovation research The theoretical framework is applied to well investigated and highly informative case studies to produce an interesting insightful and coherent volume Joseph Huber Martin Luther University Halle Germany This book is the first attempt to systematically introduce the aspect of time into economic and environmental innovation policy The authors demonstrate how windows of opportunity for technological innovations emerge and also explain how they can be identified and effectively exploited Technological innovations are widely considered as an opportunity to realise a double dividend protect the environment and increase profits by introducing a more sustainable technology However intervention by the state is often needed to overcome the competitive disadvantage caused by

externalities path dependency and lock in The authors provide extensive evidence that this resistance to technological change is subject to substantial temporal variation They argue that it is economically and politically sensible to identify periods of time in which resistance is weakest and to exploit these windows of opportunity whenever and wherever they occur They also highlight how time strategies for innovation policy can involve the preparation and creation of windows which do not yet exist Throughout the book they use an array of varied and interesting case studies to confirm and illustrate their theoretical findings These address issues such as CFC phase out the lean burn engine versus the catalytic converter ecological alternatives to chemical pesticides and the zero emission vehicle mandate in California By exploring the relationship between time strategies and technological change this book will undoubtedly lead to a more efficient and sustainable innovation policy It will be required reading for academics researchers and policymakers working in the fields of environmental innovation sustainability technology policy and political science
