The Axiomatic Method in Phonology Tadeusz Batóg, 2018-10-03 First published in 1967 The problems of theoretical phonology are among the most controversial in linguistics This monograph is a step towards an adequate logical reconstruction of phonological theories and is mainly concerned with Z S Harris structuralist theory one of the principal phonological theories of the present day Topics covered in the work include almost all essential problems of theoretical phonology The author establishes a set of basic concepts which define almost all other concepts of phonology and gives an axiomatic characterisation of these concepts The notion of a unit length segment is analysed and defined and a precise formulation of the principles of distribution is given The author offers a formal analysis of the notion of a phoneme and finally formulates and discusses fundamental hypotheses of phonology *The Axiomatic Method in Phonology* Tadeusz

Foundations of Axiomatic Linguistics Jan Mulder, 2011-06-01 TRENDS IN LINGUISTICS is a series of books that open new perspectives in our understanding of language The series publishes state of the art work on core areas of linguistics across theoretical frameworks as well as studies that provide new insights by building bridges to neighbouring fields such as neuroscience and cognitive science TRENDS IN LINGUISTICS considers itself a forum for cutting edge research based on solid empirical data on language in its various manifestations including sign languages It regards linguistic variation in its synchronic and diachronic dimensions as well as in its social contexts as important sources of insight for a better understanding of the design of linguistic systems and the ecology and evolution of language TRENDS IN LINGUISTICS publishes monographs and outstanding dissertations as well as edited volumes which provide the opportunity to address controversial topics from different empirical and theoretical viewpoints High quality standards are ensured through anonymous reviewing Routledge Library Editions: Phonetics and Phonology Various, 2021-07-14 This set of 23 volumes

originally published between 1952 and 1996 amalgamates a wide breadth of research on the subject of phonetics and phonology including studies on the axiomatic method nonlinear phonology and prosodic phonology This collection of books from some of the leading scholars in the field provides a comprehensive overview of the subject how it has evolved over time and will be of particular interest to students of language and linguistics *Euphony and Logos* Roman Murawski, Jerzy

Rewriting rules derivations and underlying representations is an enduring characteristic of generative phonology In this book John Coleman argues that this is unnecessary The expressive resources of context free Unification grammars are sufficient to characterize phonological structures and alternations According to this view all phonological forms and constraints are partial descriptions of surface representations This framework now called Declarative Phonology is based on a detailed examination of the formalisms of feature theory syllable theory and the leading varieties of nonlinear phonology Dr Coleman illustrates this with two extensive analyses of the phonological structure of words in English and Japanese As Declarative Phonology is surface based and highly restrictive it is consistent with cognitive psychology and amenable to straightforward computational implementation Concept Formation in the Humanities and the Social Sciences T. Pawlowski,2012-12-06

Uniqueness of style versus plurality of styles in terms of these aesthetic categories one of the most important differences between the recent past and the present can be described This difference manifests itself in all spheres of life in fashion in everyday life in the arts in science What is of interest for my purposes in this book are its manifestations in the processes of concept formation as they occur in the humanities broadly conceived Here the following methodological approaches seem to dominate the scene 1 A tendency to apply semiotic concepts in various fields of research 2 Attempts to introduce metrical concepts and measurement even into disciplines traditionally considered as unamenable to mathematical treatment like aesthetics and theory of art 3 Efforts to find ways of formulating empirically testable operational criteria for the application of concepts especially concepts which refer to objects directly not observable like dispositions attitudes character or personality traits Care is also taken to take advantage of the conceptual apparatus of methodology to express problems in the humanities with the highest possible degree of clarity and precision 4 Analysis of the persuasive function of language and its possible uses in science and in everyday life The above tendencies are present in this book It is divided into two parts I Methods of Concept Formation and II Applications In the first part some general methods of concept formation are presented and their merits discussed **Prospects for a New Structuralism** Hans-Heinrich Lieb,1992-01-01 This volume which has partly grown from a Round Table at the XIVth International Congress of Linguists argues for a large amount of underlying unity in outlook among different frameworks in present day linguistics the contemporary Prague School the Noematic approach the UNITYP model Integrational Linguistics Natural Morphology much recent work in phonology and Popperian Interactionism as applied in particular to historical linguistics Section I discusses philosophical issues such as realism vs cognitivism Section II characterizes current frameworks and Section III deals with individual linguistic areas like phonology Leading representatives of the various approaches are shown to agree in subscribing to most if not all of nine Principles of

New Structuralism that combine ontological realism with non cognitivist mentalism These principles define a position that is structuralist in a novel sense and appears to be partly represented also in approaches such as Katzian Platonism and Searle's intentionalism it should be compatible with frameworks like GPSG There are definite historical connections with European structuralism The position is incompatible with current cognitivism of the mechanism type but otherwise bridges traditional oppositions such as the dichotomy of generative vs non generative frameworks Words and Languages Everywhere

Solomon Marcus,2007 **Logic - Language - Ontology** Urszula B. Wybraniec-Skardowska,2022-12-01 How should we think about the meaning of the words that make up our language How does reference of these terms work and what is their referent when these are connected to abstract objects rather than to concrete ones Can logic help to address these questions This collection of papers aims to unify the questions of syntax and semantics of language which span across the fields of logic philosophy and ontology of language The leading motif of the presented selection is the differentiation between linguistic tokens material concrete objects on the one hand and linguistic types ideal abstract objects on the other Through a promenade among articles that span over all of the Author's career this book addresses the complex philosophical question of the ontology of language by following the crystalline conceptual tools offered by logic At the core of Wybraniec Skardowska's scholarship is the idea that language is an ontological being characterized in compliance with the logical conception of language proposed by Ajdukiewicz The application throughout the book of tools of classical logic and set theory results fosters the emergence of a general formal logical theory of syntax semantics and of the pragmatics of language which takes into account the duality token type in the understanding of linguistic expressions Via a functional approach to language itself logic appears as ontologically neutral with respect to existential assumptions relating to the nature of linguistic expressions and their extra linguistic counterparts The book is addressed to readers both at the graduate and undergraduate level but also to a more general audience interested in getting a firmer grip on the interplay between reality and the language we use to describe and understand it **Progress in Linguistic Historiography** E. Carson-Berndsen,2013-03-14 This book is a revised version of my doctoral thesis which was submitted in April 1993 The main extension is a chapter on evaluation of the system described in Chapter 8 as this is clearly an issue which was not treated in the original version This required the collection of data the development of

a concept for diagnostic evaluation of linguistic word recognition systems and of course the actual evaluation of the system itself The revisions made primarily concern the presentation of the latest version of the SILPA system described in an additional Subsection 8 3 the development environment for SILPA in Section 8 4 the diagnostic evaluation of the system as an additional Chapter 9 Some updates are included in the discussion of phonology and computation in Chapter 2 and finite state techniques in computational phonology in Chapter 3 The thesis was designed primarily as a contribution to the area of computational phonology However it addresses issues which are relevant within the disciplines of general linguistics computational linguistics and in particular speech technology in providing a detailed declarative computationally interpreted linguistic model for application in spoken language processing Time Map Phonology is a novel constraint based approach based on a two stage temporal interpretation of phonological categories as events *History of the Language Sciences / Geschichte der Sprachwissenschaften / Histoire des sciences du langage. 3.
