The Balance Of Power The System Of International Relations 1648 1815:

The Balance of Power Evan Luard, 1992 This book examines the emergence of the modern system of international relations in the seventeenth and eighteenth centuries the period from the end of the Thirty Years War in 1648 to the end of the Napoleonic Wars in 1815 sometimes known as the age of Europe's classical balance of power The study adopts a new approach to this theme which distinguishes it from other books about that age In place of the chronological method adopted in the many diplomatic histories of the period it employs a thematic and analytical approach considering in turn the structure of the states their foreign policy goals their economic objectives the international institutions they established and the conventions of international behaviour they recognised The book is especially concerned to examine the prevailing ideas and beliefs which affected the conduct of international relations during the period for example those concerning sovereignty status succession *raison d'etat* trade colonies the legitimacy of war as well as the ideas that were held about the balance of power itself On this basis Evan Luard considers how far the pattern of relations which resulted deserves to be described as it frequently was at the time as an international system This book thus offers a new insight into relations among states during this period The book will be of special importance for students of international relations but its novel approach should make it of interest also to students of history and to all who have an interest in this period The Balance of Power Evan

Luard, 1992-02-27 This book examines on an analytical basis the system of international relations between 1648 and 1815 It considers the character of the states their principal foreign policy goals and the beliefs that influences their relations The author seeks on this basis to examine the character of the system as a whole in particular how from the proclaimed desire to maintain the balance of power it succeeded in establishing international stability in preventing the domination of particular states Ideology and Foreign Policy in Early Modern Europe (1650-1750) Gijss Rommelse, 2016-05-13 The years 1650 to

1750 sandwiched between an age of wars of religion and an age of revolutionary wars have often been characterized as a de-ideologized period However the essays in this collection contend that this is a mistaken assumption For whilst international relations during this time may lack the obvious polarization between Catholic and Protestant visible in the proceeding hundred years or the highly charged contest between monarchies and republics of the late eighteenth century it is forcibly argued that ideology had a fundamental part to play in this crucial transformative stage of European history Many early modernists have paid little attention to international relations theory often taking a Realist approach that emphasizes the anarchism materialism and power political nature of international relations In contrast this volume provides alternative perspectives viewing international relations as socially constructed and influenced by ideas ideology and identities Building on such theoretical developments allows international relations after 1648 to be fundamentally reconsidered by putting political and economic ideology firmly back into the picture By engaging with and building upon recent theoretical developments this collection treads new terrain Not only does it integrate cultural history with high politics and foreign

policy it also engages directly with themes discussed by political scientists and international relations theorists As such it offers a fresh and genuinely interdisciplinary approach to this complex and fundamental period in Europe s development

The Birth of a Great Power System, 1740-1815 Hamish Scott,2014-07-22 The Birth of a Great Power System 1740 1815 examines a key development in modern European history the origins and emergence of a competitive state system H M Scott demonstrates how the well known and dramatic events of these decades the emergence of Russia and Prussia the three partitions of Poland the continuing retreat of the Ottoman Empire the unprecedented territorial expansion of Revolutionary and Napoleonic France halted by the final defeat of Napoleon were part of a wider process that created the modern great power system dominated by Europe s five leading states Enhanced by maps and a chronology of principal events this comprehensive and accessible textbook is fully up to date in its coverage of recent scholarship Unlike many other treatments of this period Scott extends his beyond the French Revolution of 1789 in order to demonstrate how events both before and after this great upheaval merged to produce the central political development in modern European history This book addresses the crucial phase in the emergence of the modern international system which with the subsequent addition of the USA Japan and Russia has prevailed until the present day

Peace, War and the European Powers, 1814-1914

Christopher John Bartlett,1996-10-02 The causes of war have tended to attract more attention than the causes of peace yet the two are intimately related Indeed there was much talk of war during the unprecedentedly long periods of peace between the European great powers in the years 1815 1854 and again in 1871 1914 the Near Eastern crises of 1878 and 1887 8 being only two of the more notable examples In the case of the latter there occurred a spell of fatalistic and belligerent talk in both Berlin and Vienna which in many ways anticipated that which gripped those capitals by 1914 A study of the whole question of the best methods by which to defend and advance the national interest is often more illuminating on why wars were avoided than are studies of the documentation surrounding the Holy Alliance the congress system or the Concert of Europe It is clear that the Concert tended to become most active only after a war had already been fought or when the powers had already decided that conflict was likely to prove too costly dangerous and unpredictable in its effects both at home and abroad Thus the Russians twice advanced almost to the gates of Constantinople only to recoil at the implications of trying to obtain control of the Straits Similarly Habsburg thoughts of war were frequently neutralised by reminders of financial weakness This valuable book will be welcomed by anyone wishing to understand the nature of European state relations in the nineteenth century Professor Bartlett examines why major wars did happen and did not happen with particular attention being paid to the events of 1914

Intervention and State Sovereignty in Central Europe, 1500-1780 Patrick Milton,2022 Interventions in other states on behalf of their populations is often portrayed as a novel phenomenon in state practice one which breaches the old principle of sovereignty But is this really a new practice Patrick Milton argues that such interventions occurred frequently as far back as the 16th 17th and 18th centuries

Warfare in Europe 1650-1792 Jeremy Black,2017-11-22

Scholars have tended to underrate the importance of war in the period 1650-1792 as there is a feeling that periods before and after were more consequential for military development. This collection of essays sets out to address this problem, probing the nature of warfare throughout Europe from the middle of the seventeenth century to the end of the eighteenth.

The New Makers of Modern Strategy Hal Brands, 2023-05-02. First published by Princeton in 1943, the collection of essays that constituted *Makers of Modern Strategy* has largely held the field as the key book that studied the means and ends of military power and thought and the historical figures that shaped that history. The book in two editions has long been a staple of Princeton's backlist in international politics and strategic studies. The first edition, edited by Edward Mead Earle and subtitled *Military Thought from Machiavelli to Hitler*, emerged out of a seminar of foreign policy and security experts organized between Princeton and the Institute of Advanced Study in reaction to World War II as a global conflict. The subsequent edition, edited by Peter Paret then at Stanford University, was prepared in the early 1980s and subtitled *From Machiavelli to the Nuclear Age*. In that edition, three essays were reprinted from the earlier book, four others were revised, and the remainder, twenty-two essays, were wholly new to reflect the updates in the field and also how the global political context had changed. The two books together are regarded as the founding and leading text in military and strategic studies, containing influential essays by many of the best-known scholars of the subject. The ambition of the new volume is to commission an entirely new edition of this classic reference work with 37 chapters organized into 5 sections covering key military leaders and the most important elements of strategic thinking since Thucydides and Sun Tzu. The field of strategic and military history has witnessed an intellectual renaissance in recent decades as the number of strategic challenges faced by the world has grown enormously. International politics has also changed: The Cold War ended and the Soviet Union disappeared. The United States entered a period of unipolarity only to see it challenged by the rise of new powers. China, in particular, terrorism, civil wars, so-called rogue states, insurgency and counter-insurgency, and cybersecurity all joined a growing list of strategic concerns. New technologies promise to upend our understanding of conflict. Furthermore, scholars have learned more about earlier periods from the classic thinkers of strategy to the struggles of great power war to the dynamics of world politics during the Cold War. Finally, scholarship on international politics, war and peace in the 20th century and after has become increasingly internationalized with the opening of new archives and the incorporation of new perspectives. The aim of this volume is to serve as an overview and stimulant to research in this field, one that encompasses the broader definitions of strategy in current research, reflects the current state of world politics, and also takes a more global and less Western perspective. [Origins of National Interests](#) Glenn Chafetz, Benjamin Frankel, Michael Spirtaz, 2012-10-12. The concept of identity in international relations offers too many vague and imprecise definitions of the concepts that stand at its very core. This text offers clear definitions of the concept of identity and the concepts surrounding the term.

Britain, Hanover and the Protestant Interest, 1688-1756 Andrew C. Thompson, 2006

A new examination of the links between religion and politics in the early eighteenth century showing how the defence of protestantism became a major plank in foreign policy Religious ideas and power politics were strongly connected in the early eighteenth century William III George I and George II all took their role as defenders of the protestant faith extremely seriously and confessional thinking was of major significance to court whiggery This book considers the importance of this connection It traces the development of ideas of the protestant interest explaining how such ideas were used to combat the perceived threats to the European states system posed by universal monarchy and showing how the necessity of defending protestantism within Europe became a theme in British and Hanoverian foreign policy Drawing on a wide range of printed and manuscript material in both Britain and Germany the book emphasises the importance of a European context for eighteenth century British history and contributes to debates about the justification of monarchy and the nature of identity in Britain Dr ANDREW C THOMPSON is Lecturer in History Queens College Cambridge

Taming the Sovereigns Kalevi Jaakko Holsti, 2004-01-22 Many analysts claim that international politics has recently entered a new era following the end of the Cold War and then the events of September 11th In this book Kalevi Holsti asks what we mean by change in international politics How do we identify it How do we distinguish between significant and unimportant changes Do we really live in a new era or do we see more continuity than transformation in the texture of international politics Combining theoretical and empirical argument Holsti investigates eight major international institutions including the state sovereignty territoriality international law diplomacy trade and war Having identified the types of change these institutions have undergone during the last three centuries Holsti analyses the sources of those changes and speculates on their consequences This is a major book likely to have lasting influence in the study of international politics
